STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSISSIPPI Grenada area, Grenada County	1	Midnight -5 a.m.					4	4	Rain	6.29 inches of rain, of which about 5 inches fell in 2 hours, flooded streets of Grenada with 10 stores damaged by floodwaters; heavy runoff and overflow from creek caused considerable damage to crops in surrounding area.
OKLAHOMA Sand Springs, Tulsa County	1	2 a.m.			0	0		1	Tornado	Funnel reported to have dipped down and destroyed revival tent and broke many of the 2,000 chairs.
KANSAS Rice and Saline Counties	1	2-3 a.m.							Wind and electrical	Thunderstorm hit Salina about 2 a.m. Wind gusts to 44 m.p.h., recorded at Air base but were evidently higher in nearby area. Power and transmission lines broken in a number of places. At 2:15 a.m., bolt of lightning struck house in Lyons, Rice County. T.V. set ruined and some damage done the house and contents by fire. Storm moved southeastward.
OKLAHOMA Tulsa, Tulsa County	1	2:20 a.m.			0	0	4	1	Tornado, rain, electrical, and funnel aloft	Tornado dipped to tree-top level and moved across southern edge of Tulsa. House unroofed, shopping center had building damage and broken windows; other buildings damaged, trees uprooted, and utility lines damaged. Several homes struck by lightning, causing damage varying from $200 to $3,000. Second funnel sighted at same time about 1 mile southwest; evidently remained aloft as no other reports received. Storm moved northeastward.
OKLAHOMA Vinita area, Craig County	1	3:10 a.m.					4	1	Wind and rain	Strong winds destroyed large barn and windmill and damaged small shed on farm north of Vinita. Barn contained 100 bushels of grain. Windblown tin cut through telephone cable and electric powerline.
ARKANSAS Sebastian, Crawford, Washington, Benton, and Carroll Counties	1	3:15 a.m.				1			Wind and rain	Widespread thunderstorm activity with high winds and locally heavy rains. Extensive wind damage to powerlines, roofs, trees, and TV antennas. Several homes and outbuildings damaged; 600 young turkeys killed. Heavy rains caused about $5,000 damage by local flooding in Fort Smith.
KANSAS Southeastern portion	1	3:30-6 a.m.							Wind and electrical	Heavy thunderstorm over extreme southeast. Winds estimated at 50 m.p.h., or higher, broke tree limbs, and some windows, and caused roof damage at both Parsons and Fort Scott. Storm moved southeastward.
OKLAHOMA Coweta, Wagoner County	1	5 a.m.			0	0			Funnel aloft	Funnel aloft reported over Coweta moving northeastward.
OKLAHOMA Sallisaw area, Sequoyah County	1	A.m.							Wind and rain	Strong winds accompanied by heavy rain caused damage to roofs, outbuildings, trees, utilities, etc.
MISSOURI Kennett, Dunklin County	1	Early morning							Rain	Up to 5 inches of rain. Local flooding around 20 homes.
ARKANSAS Conway (3 miles west of), Faulkner County	1	1 p.m.	** 880	150			4	1	Wind and rain	Hangar destroyed and 3 airplanes extensively damaged by wind at private airport. Excessively heavy rainfall accompanied storm. Storm moved northeastward.
MISSOURI Pleasant Hill, Cass County	1	1:15 p.m.			0	0			Funnel aloft	
MONTANA Richland County	1	3 p.m.	6-8	*1-1/2			1	5	Hail	Hailstones 1/4 to 1/2 inch in diameter. Damage in 3 communities, Lambert, Hilcrest, and Girard. Storm moved eastward.
SOUTH DAKOTA Southeastern portion	1	3-7 p.m.			0	0	3	4	Funnels aloft, hail and wind	Series of thunderstorms left hail up to size of golf balls. Most between Wessington Springs and Academy. Minor wind damage. Irregularly shaped clouds described by some as "funnels". Storm moved southeastward.
MONTANA Brockway and Circle areas, McCone County	1	3:30 p.m.	10	* 1-1/2			2	5	Hail and wind	Heavy wind accompanied storm. Hailstones up to size of walnuts. Storm moved northeastward.
MINNESOTA Madison (near), Lac Qui Parle County	1	4 p.m.			0	0	3	4	Hail and funnel aloft	Hail from pea size up to 3 inches in diameter damaged roofs, broke windows, and flattened crops. Several persons observed funnel cloud aloft. Storm moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Plains area, Yoakum County	1	5 p.m.	25	*15			°4	C	Wind, rain, hail, and dust	Winds estimated at 90 m.p.h., with gusts even higher brought blinding dust and sand. Heavy rain dumped official 1.89 inches in 20 minutes. Hail of marble size fell heavily. Some farmers estimated crop losses of 100 percent; roofs and phone lines and equipment damaged and granary blown down.
ARKANSAS Howard and Pike Counties	1	7 p.m.					4	3	Wind, electrical, rain, and hail	Widespread thunderstorm activity. Extensive damage to homes, outbuildings, and trees, with principal damage in Saratoga area, Howard County. Some hail reported in Antoine area, Pike County. Storm moved northwestward.
MONTANA Square Butte, Chouteau County	1	8:30 p.m.	11	*2			1	4	Hail	Ground covered up to 1 inch with hail. Stones up to 1 inch in diameter. Storm moved eastward.
NEBRASKA Knox County (western portion)	1	Evening					2	4	Hail	Hailstones size of marbles.
ARIZONA Phoenix, Maricopa County	1				1		1	1	Heat	Man died of heatstroke.
OKLAHOMA Creek County	1				0	0			Tornado and funnel aloft	Motorist lifted off highway and set in ditch by what was believed to have been tornado 8 miles east of Drumright. Police reported funnel aloft 8 miles west of Sapulpa at 3:15 a.m. Funnel evidently moved through open country or dipped down momentarily as no other damage reported. Storm moved eastward.
	1									Minor storms also reported at Blackfoot, Idaho; at Emporia, Kans.; at Vida, Mont.; near Central City and Page and in western Washington County, Nebr.; and at Blackwell, Cushing, and Okmulgee, Okla.
SOUTH DAKOTA Northern and eastern portions	1-2	9 p.m.-7 a.m.			0	0	3	5	Funnel aloft, hail, and wind	Scattered hail in Harding and Perkins Counties before midnight. Thunderstorm, with intermittent hail and gusts to 50 m.p.h., passed Pollock at midnight, reached Huron at 5 a.m., with gusts to 75 m.p.h. Funnel cloud southeast of Huron. Wind died after passing Madison at 6:40 a.m. Sporadic hail and wind damage from Pollock to Madison. Storm moved southeastward.
NEBRASKA Burt County (northwestern portion)	2	3-5 a.m.	5	*3-4			2	4	Hail	Storm moved eastward or southeastward.
NEBRASKA Pender (9 miles east of), Thurston County	2	5:30-5:45 a.m.	4-1/2	*1-1/2			1	4	Hail	Stones 1-1/2 to 2 inches in diameter. Storm moved northeastward.
TENNESSEE Gates and Ripley areas, Lauderdale County	2	A.m.							Rain	At Gates, several inches of water backed into business houses and some homes flooded. Near Ripley, numerous fields and 1 house flooded. Stretch of Highway 51 between Gates and Dyersburg inundated.
NEBRASKA Hitchcock County (southwestern and south-central portions)	2	4 p.m.	12	*1-2			3	5	Hail	Hailstones size of marbles. Storm moved eastward.
NORTH DAKOTA Sheridan, Wells, Foster, Griggs, and McLean Counties	2	4:45 p.m.	160	*2-7		4	5	6	Wind and hail	Hailstones 1 inch in diameter. Some crops completely destroyed, building roofs and windows broken and damaged at Carrington. Storm moved southeastward.
MICHIGAN Northern portion	2	Afternoon-evening				1	4	3	Wind, electrical, rain, and hail	Squall line moved across Upper Peninsula and extreme northern Lower Michigan. High winds downed many trees and utility lines. Lightning caused some damage, and in some areas heavy showers resulted in flooding. Heavy hail reported in Escanaba area. Storm moved eastward.
NEBRASKA Curtis (9 miles southwest of), Frontier County	2	5:15-5:30 p.m.	5	880	0	0	4	3	Tornado	Tornado moved northwestward.

See footnotes at end of table

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
FLORIDA Jacksonville, Duval County	2	6:30 p.m.			0	0			Tornado (suspected)	Moved southeastward.
MISSISSIPPI Hermanville, Claiborne County	2	7 p.m.				4	4	2	Wind	Squall line apparently developed at Vicksburg and moved southeastward with increasing violence until small town of Hermanville reached; several small homes badly damaged.
SOUTH DAKOTA Nisland, Vale, Butte, Wall and Pennington Counties	2	8 p.m.					4	4	Hail	Hailstones up to 16 inches in circumference. Buildings and cars damaged, a few young livestock killed. Less severe hail extended to near Wall. Storm moved southeastward.
MINNESOTA Grant and Wilkin Counties	2	8-10 p.m.					1		Hail	Damage spotty. Some areas up to 100 percent small grain loss. Storm moved southeastward.
NEBRASKA Wisner (near), Cuming County	2	8:30 p.m.	Short	Narrow	0	0	2	1	Tornado	Hog house moved to 50 feet turned around, and set down with only minor damage.
NEBRASKA Nelson (9 miles west of), Nuckolls County	2	9 p.m.			0	0			Funnel aloft	Moved northeastward.
NEBRASKA Clay Center (southwest of), Clay County	2	9:40 p.m.	Short	Narrow	0	0			Funnel aloft	
NEBRASKA Brady (9 miles southeast of), Lincoln County	2	10:02 p.m.	Short	Narrow	0	0			Funnel aloft	
NORTH DAKOTA Richland County	2						4	5	Wind and hail	Several barns damaged.
	2									Minor storm also reported near Minneapolis, Minn.
SOUTH DAKOTA Harding to Minnehaha Counties	2-3	9 p.m.-5 a.m.					5	5	Wind, hail, and electrical	Thunderstorms entered northwest corner; hail began in western Perkins County, and fell in narrow band across State, ending near Sioux Falls. Extensive high winds from Faith to Sioux Falls. Most damage east of Missouri River. 13 barns and numerous smaller buildings wrecked. 10 barns and 1 house unroofed. 4 house trailers overturned. Lightning fire demolished home and contents. Strongest wind of record at Huron, gusts to 97 m.p.h. Storm moved east-southeastward.
MISSOURI Valley Park, St. Louis County	2-3								Rain	Meramec River crested at 32 feet, 16 feet above flood stage. 800 persons in 200 homes had to be evacuated.
IOWA Northern portion	3	3:45-7 a.m.	300	*50			5	5	Wind	Damaged buildings, utilities, crops, and injured or killed livestock. Entered State at Lyon County about 3:45 a.m., and moved east-southeastward crossing Fayette County about 7 a.m.
MINNESOTA Rock and Nobles Counties	3	5-6 a.m.	50	*8	0	2	5	5	Wind, electrical, hail, and tornado (suspected)	Generally straight-line winds with some local evidence of tornado blew down at least 12 barns, thousands of trees, telephone lines, outbuildings and windmills. Livestock killed by lightning. Drive-in theater and house trailer damaged in Luverne. Lumberyard roof blown off and church destroyed at Ellsworth. Grain downed in fields. Hail damage to crops in 5 townships. Storm moved southeastward.
IOWA Boone and Jasper Counties	3	7 a.m.			0	0			Funnels aloft	Public reported sighting funnel clouds aloft.
IOWA Mahaska and Iowa Counties southeastward to Van Buren County	3	7:15-9:30 a.m.					4	5	Wind and electrical	Destroyed farm buildings, and caused local flooding. Storm moved southeastward.
IOWA Pottawattamie County	3	Morning			1		1	1	Electrical	Farmer killed as he worked in field.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MONTANA Phillips County	3	2 p.m.					1	4	Hail	Heavy rain at Malta flooded roads. Hail damage reported from local areas in county. Storm moved eastward.
MINNESOTA Houston County	3	Afternoon			0	0			Funnels aloft	Air force pilot reported funnel clouds moving southward.
SOUTH DAKOTA Brule and Lyman Counties	3	3-9:25 p.m.			0	0	5	4	Hail, wind, and funnels aloft	Thunderstorms began in northwestern part of State about 3 p.m., with intermittent hail Strong winds developed in Lyman County. Unidentified person told press 2 funnels met north of Kimball. Buildings damaged on 5 farms. County fairground exhibition hall and grandstand demolished. 2 display windows broken. House trailer overturned. Storm moved east-southeastward.
COLORADO Meeker, Rio Blanco County	3	4:40 p.m.			0	0			Tornado	Freak wind damaged Rio Blanco County High School building at Meeker. Wind caught corner of roof, peeling it back over one-half building.
NEBRASKA Roscoe (6 miles south-southeast of), Keith County	3	8 p.m.	Short	Narrow	0	0	3	2	Tornado	Tornado moved eastward.
MONTANA Hilger and Roy, Fergus County	3	10 p.m.	30	*8			1	4	Hail	Storm moved northeastward.
NEBRASKA North Platte and vicinity, Lincoln County	3	10 p.m.			0	0	3	2	Wind and funnels aloft	2 funnels observed.
NEBRASKA Callaway (near), Custer County	3	10:30 p.m.	Short	Narrow	0	0	3	1	Tornado	Funnel observed. Storm moved north-northeastward.
NEBRASKA Comstock (north and east of), Custer County	3	Late evening			0	0	3	2	Wind and tornado (suspected)	Possibly with tornado. Storm moved eastward.
	3									Minor storms also reported at Rexville, Ind.; in Hamilton and Marshall Counties, Iowa; at Essex Center, Essex Junction, and Underhill, Vt.
SOUTH DAKOTA Gregory to Union Counties	3-4	10 p.m.-2 a.m.					3	4	Wind and hail	Small buildings blown down near Gregory and Tyndall. Most hail fell near and shortly after midnight between Lesterville and Elk Point. Storm track 25 miles south of more severe hailstorm (listed separately). Storm moved east-southeastward.
SOUTH DAKOTA Hutchinson, Turner, Lincoln, and Union Counties	3-4	11 p.m.-1 a.m.					[illegible]	6	Hail and wind	Said to have been most destructive hailstorm in State history. Resulted from same thunderstorms that produced earlier storm. Sporadic hail from Kimball to Freeman, then devastating along 8-mile wide band to Hawarden, Iowa. Most crops total loss. Hailstones reached baseball size. Buildings and cars damaged, cattle bruised, several hogs killed, and bark stripped from trees. Strong winds blew car from road. Storm moved southeastward.
IOWA Sioux County	4	12:30 a.m.	35	*8			5	5	Hail and wind	Damaged buildings and crops. Storm moved southeastward.
IOWA Ida County to Iowa County	4	1:45 a.m.-5 a.m.	150	*50	0	1	6	5	Wind and tornado (suspected)	Damaged buildings and utilities. Motorist reported seeing funnel in northeastern Crawford County. Woman injured when her basement home collapsed. Storm moved east-southeastward.
WISCONSIN Brill, Barron County	4	6:30 a.m.	4	150	0	4	5	1	Tornado	2 funnels reported moving northeastward.
WISCONSIN Door County	4	2 p.m.				2	4	3	Wind	High winds with cold front passage. Storm moved eastward.
MICHIGAN Harbor Springs, Emmet County	4	4 p.m.	6	35	0	0	4	3	Tornado	Funnel developed near western edge of Harbor Springs, destroyed 2 barns, damaged several other rural buildings, and uprooted many trees; moved northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
INDIANA Johnson County	4	4:45 p.m.				25	°5	C	Wind and rain	High winds damaged houses, TV antennas, and utility lines. Several barns flattened. Court house at Franklin damaged severely. 3 inches of rain falling in 40 minutes at Franklin flooded streets and basements. Over 1,000 trees blown down in Franklin. 500-foot radio tower collapsed.
ILLINOIS Southwestern portion	4	5 p.m.							Wind and hail	Scattered wind damage in Jerseyville and heavy hail damage to crops west of city. Impossible to estimate damages for particular areas. Scattered wind, rain, and hail damage occurred during following three hours in area southeastward to Carbondale and West Frankfort.
INDIANA Bengal and Marietta, Shelby County	4	5 p.m.			0	0	°5	C	Tornado	Tornado struck area between Bengal and Marietta. Many buildings damaged or destroyed.
MICHIGAN Presque Isle County	4	5 p.m.	5	130	0	0	4	3	Tornado	Funnel developed just south of Lake May, destroyed 3 barns, damaged several other rural buildings, and downed a large number of trees; moved eastward.
NEBRASKA Maywood (2 miles east of), Frontier County	4	5-5:30 p.m.	Short	33	0	0	4	2	Tornado and funnel aloft	4 other funnels observed in vicinity.
INDIANA Bartholomew County	4	6-9 p.m.					5	4	Electrical, wind, and hail	Residence west of Columbus struck by lightning and burned to ground. Several other house fires of same origin. Winds reached 80 m.p.h., at Bakalar Air Force base where wind damaged 2 planes. Many trees blown down which damaged utility lines, cars, and other property. Crops damaged by hail. $25,000 damage by lightning, $75,000 by wind to property; $50,000 hail damage to crops.
MICHIGAN Livingston and Oakland Counties	4	6:55 p.m.	32	50	0	5	5	1	Tornado, wind, rain, and hail	Funnel developed just southeast of Brighton, injuring 4 persons, destroying 2 homes and damaging 10 others in new subdivision. Funnel lifted several times as it moved eastward toward northern suburbs of Detroit, where funnel apparently was replaced by windsqualls. Damage to buildings, trees, and powerlines reported at many points along path, including Detroit suburban area. Heavy rains and some hail occurred along and near storm path, causing flooding in some places. Storm moved eastward.
OHIO Bryan, Williams County	4	6:55 p.m.	4	75-100	0	5	°5	C	Tornado, funnels aloft, and rain	This storm struck about an hour after rain started, and was part of squall line thunderstorm. Witnesses reported seeing several small funnel clouds aloft, but only 1 made contact with ground. Even so, it caught only tree and roof tops over most of its path. Only in rural sections did it demolish whole buildings (barns). Principal damage to some 30 business buildings and homes in city, most of which lost large sections of roofs, to windows, signs, etc. Included was Williams County Court house where clock face blown off west side of tower and landed on east side. Tornado moved east-southeastward. This is well substantiated as real tornado although it never made firm contact with ground. Mr. Lautzenheiser, State Climatologist on leave from Boston, viewed damage and concurred with local residents that true funnel cloud was present.
MICHIGAN New Lothrop (near), Shiawassee County	4	7 p.m.	1				4	1	Wind	High winds struck small area 3 to 4 miles west of New Lothrop, destroying or damaging several farm buildings and downing many trees.
INDIANA Marion County	4	7:45 p.m.				2	4	1	Electrical and wind	Lightning started fires in at least 10 houses and 7 other buildings. Wind blew down outdoor theater screen and damaged several cars. $30,000 damage by lightning, $20,000 by wind.
KENTUCKY Gallatin, Grant, and Pendleton Counties	4	10 p.m.			0	3	5	5	Wind, hail, and tornadoes (suspected)	Storm seemed to begin in Gallatin County, moved into Grant County, and then passed into Pendleton County. By path of destruction and type of damage, it is possible that tornadoes may have existed, although no funnel clouds observed. Numerous barns, several homes, and other buildings unroofed or otherwise damaged or destroyed. Trailer turned over and occupants injured. Many trees and utility poles blown over, causing disruption to power and

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
KENTUCKY (Cont'd.)										telephone services. Hail destroyed tobacco, corn, and gardens, with about 200 claims for crop damage reported by insurance companies.
TENNESSEE Martin, Weakly County	4	10:30-10:45 p.m.	2		0	0	4	1	Tornado	Funnel observed moving eastward. 2 paths of damage across city about 1/4 mile apart, each 200 yards wide. Winds felled carnival ferris wheel, demolished store house, and damaged roofs of 2 others, and blew down trees and limbs which damaged church, 4 homes, automobile and truck.
INDIANA Jefferson County	4	P.m.					6	6	Rain	Heavy rain and resulting floods washed out several bridges, damaged about 100 pleasure boats at Brooksburg and flooded many tobacco fields. Flood water from Crooked Creek damaged 123 homes and businesses in Madison. Road damage alone estimated at $100,000.
KENTUCKY Harrison, Robertson, and Bracken Counties	4	P.m.					4	4	Wind and hail	Winds ripped through barns and dwellings, destroying several barns and damaging a few homes. Chimney of church blown off. Power services disrupted by falling limbs. Extensive damage to tobacco crops caused by hail.
INDIANA New Castle, Henry County	4	Evening				2	3	1	Wind	High winds collapsed skating rink tent injuring 2 persons.
INDIANA Dover (northwest of), Boone County	4	Evening			0	0	4	1	Tornado	Small tornado reported to have destroyed barn and other small buildings.
INDIANA Preble and Decatur, Adams County	4	Evening				5	4	1	Wind	Winds of severe thunderstorm struck tavern removing most of roof. Several automobiles crushed by parts of roof. Minor damage occurred at nearby Decatur.
INDIANA Huntington County	4	Evening					°4	C	Wind	High winds struck eastern half of county, destroying barn, damaging many buildings, overturning house trailer, and toppling many trees.
KANSAS Riley County	4					1			Electrical	Woman injured and slight damage done to house by lightning a few miles south of Randolph.
	4									Minor storms also reported at Yuma, Ariz.; in Putnam County and at Whiting, Ind.; near Carthage and Washington, Mo.; at Fairbury, Nebr.; at Bennington, Vt.; and at Wausau, Wis.
INDIANA Switzerland County	4-5	8 p.m.-3 a.m.				1	6	5	Rain and electrical	4 to 7 inches of rain flooded fields, streets, and houses. Most damage occurred in Vevay and western part of county. Damage to tobacco fields estimated at $130,000 and corn $105,000. A few farm animals killed by lightning. $750,000 rain damage and $5,000 lightning damage to property. Crop damage by rain.
MISSOURI Labadie, Franklin County	4-5								Rain and wind	Labadie and Fiddle Creeks flooded. 37 persons driven from homes by flood waters.
MASSACHUSETTS Central and Western portion **NEW HAMPSHIRE** and **VERMONT** Extreme southern portions	5	Midday - evening			0	0	4	3	Electrical, hail, wind, and tornadoes (suspected)	Brief but severe thundersqualls struck many scattered localities in area. Many reports of hail of marble size, with golf-ball size at Fitchburg, Mass., with loss of gardens and crops. Lightning and wind damage to trees and utility lines. 3 localities reported "baby twisters" with narrow severe damage paths. At Northampton, Mass., at 9:20 a.m., a 1-mile very narrow path of damage to trees and wires in southeast direction. At about 7:30 p.m., second one reported from Brattleboro, Vt., accompanied by wierd, yellow and red-colored sky, and hail, with extensive damage to trees and utilities in path to southeast. Near 8 p.m., third, 20-yard wide damage path in Leominster, Mass., with hail up to 1-1/2 to 2 inches in diameter. Path direction to southeast. No confirmation of funnel clouds or tornadoes received concerning these storms.
NORTH CAROLINA Cabarrus, Martin, Pasquotank, and Wilson Counties	5	Afternoon -evening					4	4	Electrical, wind, and hail	Widespread heavy thunderstorms in connection with prefrontal squall line caused damage in several localities. Crop damage mostly from hail, property damage mostly to power and communications facilities by lightning and falling trees.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ARIZONA Nogales, Santa Cruz County	5	5 p.m.	5	2	3		3	1	Electrical, wind, rain, and hail	3 deaths and considerable property damage in Nogales and Sonora.
DELAWARE Fenwick Island Beach, Sussex County	5	5 p.m.			0	0	3		Tornado	Small tornado picked up jeep, carried it 50 feet; took small house off foundation; lifted small boat out of water and flung it about 200 feet against telephone pole.
DELAWARE Frankford, Roxana, and Fenwick Island, Sussex County	5	5 p.m.	10	100			4		Wind and hail	Winds up to 80 m.p.h., associated with thunderstorm and hail caused damage to barns, cottages, chicken houses, TV antennas, and trees. Storm moved southeastward.
SOUTH CAROLINA Cooper River, Charleston County	6	11 a.m.			0	0			Waterspout	Small waterspout.
WYOMING Casper, Natrona County	6	3 p.m.						1	Electrical	Lightning set afire oil storage tank, destroying over 10,000 barrels of oil and the tank.
CALIFORNIA Chowchilla and LeGrand areas and southeast of Copperopolis, Madera, Merced and Calaveras Counties	6	5:23-6:30 p.m.					5		Wind, electrical, rain, and hail	Thunderstorms over central Sierras and high local winds in some foothill areas. High wind gusts sweeping up Stanislaus River Canyon tore out false work and dropped center span of O'Byrnes Ferry Bridge under construction, damage estimated about $75,000 by Secretary of Tri-Dam Project. Windstorm toppled trees up to 20 inches in diameter, accompanied by thunder, lightning, traces of rain and scattered hail, with some damage in orchards reported. At LeGrand, heavy wind gusts lasted 5 to 10 minutes, uprooted trees and broke windows, gusts estimated above 80 m.p.h., by observer. Hail fell at Tahoe and Squaw Valley.
NORTH DAKOTA Cavalier County	6	6 p.m.		*14			4	6	Wind and hail	One of the most devastating hailstorms ever to hit area caused damage to grain, potatoes, and beets. Unusually large area. Hailstones larger than golf balls. Storm moved southeastward.
MINNESOTA Polk County	6	7 p.m.	16	*3					Hail	Damage reported in 5 townships ranging from 5 to 90 percent loss. Windows broken and siding damaged. Hail generally 1/4 inch in diameter with some up to 3-1/2 inches. Storm moved east-southeastward.
WEST VIRGINIA St. Marys and vicinity, Pleasants County	6	7 p.m.						1	Wind and rain	Trees uprooted, roofs and outbuildings damaged, antennas broken and bent, telephone and power services disrupted.
MINNESOTA Warren and vicinity, Marshall County	6	8 p.m.	30	*12		2	5	6	Hail and wind	Hailstones up to size of baseballs battered 12 townships. Crop damage up to 100 percent in some sections. Extensive damage at Warren to residences, business establishments, and automobiles estimated at $200 per car. Storm moved southeastward.
MINNESOTA Red Lake Falls and vicinity, Red Lake County	6	8 p.m.	15	*3			4	5	Hail	Crops damaged over 45-square mile area. Hailstones 1 inch with some near 3 inches. Storm moved southeastward.
ARIZONA Sunnyslope, Maricopa County	6	Evening						1	Wind	Winds damaged roofs and aerials in residential section.
	6									Minor storms also reported at Lakeland and Savannah, Ga.; at Uniontown and Winstead, Pa.; and at Paris, Tenn.
ARIZONA Tonto National Forest	6-7						5	1	Electrical	Lightning started fires that destroyed over 500 acres of fir trees.
WISCONSIN Madison (north of), Dane County	7	12:36 p.m.			0	0			Funnel aloft	Funnel moved northeastward.
VERMONT Bristol, Addison County	7	2 p.m.	10	*1-1/2			1	4	Hail and wind	1-inch diameter hail covered ground up to 3 inches deep, destroyed gardens and crops, and shredded tree leaves. Storm moved eastward.

See footnotes at end of table.

CONNECTICUT (Cont'd.)										flooding hampered traffic at several points in Hartford. House struck by lightning in Granby, with minor fire damage in basement. Peak wind gust during storm of 37 m.p.h., observed at WBAS.
TENNESSEE Sumner and Robertson Counties	9	P.m.					1		Hail and electrical	6 head of cattle struck by lightning and killed in Clearview community, Sumner County. Hail caused heavy damage to tobacco crops in Oak Grove community, Sumner County and in eastern sections of Robertson County.
KENTUCKY Powell County	9				1	4			Electrical	Lightning killed man and knocked down several other persons.
	9									Minor storms also reported at Tucson, Ariz.; in Wallace County, Kans.; in Garrard County, Ky.; at Holyoke, Mass.; in Martin County, N.C.; and in Cookeville and vicinity, Tenn.
MISSOURI Macks Creek, Camden County	10	3:50 a.m.			0	0			Funnel aloft	
CALIFORNIA Daggett and Lenwood areas, San Bernardino County	10	12:26-1:47 p.m.						1	Rain and electrical	0.96 inch rain fell at Daggett between 12:26 and 1:47 p.m. with thunder from 12:58 to 1:47 p.m. Excessive rains also reported west of Lenwood on Highways 66 and 91, with resulting floodwaters covering highway with debris, momentarily halting traffic.
LOUISIANA Burrwood, Plaquemines Parish	10	2:14 p.m.				0			Waterspouts	3 waterspouts observed west of station.
MONTANA Missoula, Missoula County	10	5:23 p.m.	2-5	*2-5			4	1	Wind	Fastest mile ever recorded at Missoula WBAS, 60 m.p.h., occurred during storm. On 12th, new Missoula record fastest mile, 72 m.p.h., set, but no damage from this storm. Storm moved north-northeastward.
NORTH DAKOTA Burke County	10	Evening					3	4	Hail	
SOUTH CAROLINA Dale (near), Beaufort County	10				1				Electrical	
	10									Minor storms also reported at Powellton, Ill.; at Beloit, Topeka, Russell, and Sylvan Grove, Kans.; at Limestone and in Mars Hill Township, Maine; and at Proctor, Minn.
WISCONSIN Eastern Counties	11	1 p.m.					4	3	Wind, rain, electrical, and hail	Wind, flood, and lightning damages. Storm moved eastward.
WISCONSIN Green Bay (5 miles south of), Brown County	11	1 p.m.			0	0			Funnel aloft	Funnel moved east-northeastward.
WISCONSIN Denmark, Brown County	11	1:30 p.m.			0	0	3	1	Tornado	Tornado moved east-northeastward.
CALIFORNIA Redlands and Big Bear Lake areas, San Bernardino County	11	1:45-2:15 p.m.			1	2		1	Rain and electrical	Intense local thunderstorm centered over Redlands dropped 0.90 inch of rain in less than 30 minutes, mostly in 15 minutes for greatest July daily and monthly amounts since records began in 1888. Heavy rain confined within city, outskirts had only traces. Resulting floodwaters drowned child in open, flood-control channel. Lightning started several forest fires in nearby mountain areas, sheared 50-foot treetop at Big Bear, smashing roof of cabin. Lightning also slightly burned woman and daughter in trailer park and interrupted radio and TV reception at Big Bear.
WISCONSIN Whitelaw, Manitowoc County	11	2 p.m.			0	0	3	1	Tornado	Small tornado moved northeastward.
MICHIGAN Lower southern portion	11	Afternoon					5	6	Rain and wind	Heavy rainfall, up to 5 inches, caused severe crop damage in Clinton County and sections of adjacent counties. Some areas in southeast and east-central that had suffered flooding a few days earlier, received another 1 to 2 inches of rain. Fowler, Clinton County, flooded, and many roads, streets, and basements flooded in heavy rain

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MICHIGAN (Cont'd.)										area. Several streams rose above flood stage. Scattered wind damage reported in several areas of southern Lower Michigan.
NORTH DAKOTA Grand Forks (2 miles west of) Grand Forks County	11	3:56 p.m.			0	0	1	1	Tornado	Funnel apparently touched down several times.
NORTH DAKOTA Grant County	11	Late afternoon							Wind	Wind damaged barns and other buildings and a few barns blown down.
SOUTH CAROLINA Hiltonhead (near), Beaufort County	11	9 p.m.			0	0			Waterspout	Small waterspout apparently moved inland, no damage reported; moved northwestward.
FLORIDA Ft. Lauderdale, Broward County	11	P.m.				1			Rain and electrical	1 person injured by lightning.
FLORIDA Jacksonville, Duval County	11	P.m.					4		Electrical	Severe electrical storm; Weather Bureau counted 374 lightning strokes. Lightning-started fires caused estimated $15,000 damages in city.
FLORIDA Miami (18 miles west of), Dade County	11	P.m.			0	0			Funnel aloft	
COLORADO Grand County	11				1				Electrical	Man killed by lightning while fishing on Granby Reservoir.
NORTH DAKOTA Sheridan County	11								Wind	Heavy damage to crops and farm buildings.
	11									Minor storm also reported near Montpelier, Vt.
WISCONSIN Madison (south of), Dane County	12	9:20 a.m.			0	0			Funnel aloft	Near Lake Waubesa. Funnel moved northeastward.
ILLINOIS Mt. Carroll, Carroll County	12	9:30 a.m.					4	4	Rain and hail	Rainfall of 2.84 inches fell in slightly more than 1 hour. Crop damage by water and some hail.
NEBRASKA Atkinson (northeast of), Holt County	12	1 p.m.	Short	Narrow	0	0			Funnel aloft	
SOUTH DAKOTA Southeastern portion	12	Afternoon					2	4	Hail	Hailstones reached hens' egg size northeast of Bonesteel. Small areas of hail also near Stickney, Loomis, and south of Sioux Falls.
WISCONSIN Madison (8 miles south of), Dane County	12	4:02 p.m.			0	0			Funnel aloft	Funnel moved northeastward.
NORTH CAROLINA Jones County	12	4:30 p.m.						4	Hail	8 square miles damaged, mostly tobacco and corn.
NEBRASKA Grand Island (northeast of), Hall County	12	5:30 p.m.	Short	Narrow	0	0			Funnel aloft	
NEBRASKA Boyd County (extreme eastern portion)	12	5:30-6 p.m.	4	*3			3	4	Hail	Hailstones 1-1/2 to 2-1/2 inches in diameter. Ground covered in center of storm. Storm moved southward.
NEBRASKA McCook (32 miles northeast of), Frontier County	12	6:38 p.m.	Short	Narrow	0	0			Tornado	Struck nothing of value.
INDIANA Fowler, Benton County	12	7 p.m.					4	1	Electrical	Barn located 11 miles west and 1-1/2 miles north of Fowler struck by lightning and burned to ground.
NEBRASKA Knox County (central and eastern portions)	12	7-8 p.m.	20	*1-1/2			3	4	Hail	Hailstones 3/4 to 2 inches in diameter. Storm moved southeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
INDIANA Cedar Lake Airport, Lake County	12	8-9 p.m.	** 200	25	0	0	5	1	Tornado	Small tornado destroyed hangar, 70 x 100 feet, and damaged 7 small aircraft. Tornado moved northward.
NEBRASKA North Platte (5 miles north of), Lincoln County	12	8:50 p.m.	Short	Narrow	0	0			Funnels aloft	2 funnels aloft reported.
INDIANA Lake County	12	Evening					°5	C	Wind, rain, and electrical	Severe thunderstorms raked county. High winds blew down trees, and damaged buildings. Lightning and resulting fire damaged warehouse, some buildings, and electric lines. Several inches of rain flooded streets and houses. 300 families evacuated from homes. $50,000 damage by wind, $120,000 by lightning, and $30,000 by rain.
MICHIGAN Armada, Macomb County	12	Evening					4	1	Electrical	Lightning struck chimney of high school, ripping off section which dropped through roof.
	12									Minor storms also reported at Clinton and West Union, Iowa; and near Atkinson, Nebr.
ILLINOIS Estreme northeastern portion	12-13	Night			4		7		Rain	Chicago had second major flash flood in less than 3 years. Rainfall amounts comparable to October 1954 storm, but occurred in shorter period. For second time in history, locks at Lake Michigan opened to permit reverse flow of water into Lake Michigan from Chicago river. Total damages lighter than in October 1954 storm because of better control measures and drier soil condition to start with. Chicago and Joliet areas had 5 to 8 inches of rain while peak rain totals 7 to 10 inches in Kankakee area. All transportation paralyzed. Midway Airport out of service for approximately 24 hours. Crop losses heavy, but impossible to estimate. Record high water observed on lower Kankakee River and on Illinois River at Marseille.
INDIANA Tippecanoe County	13	Early morning					4	1	Wind	Severe thunderstorm caused minor damage by blowing down trees and knocking out electric service in local areas temporarily.
MINNESOTA Lake Kabetogama area, St. Louis County	13	Early a.m.				3	1	1	Electrical and wind	Lightning struck tree, injuring 3 nearby campers. Strong winds damaged boats and docks, uprooted trees, and downed powerlines.
LOUISIANA New Orleans, Orleans Parish	13	12:50 p.m.			0	0	2	1	Waterspout	Waterspout on Bayou St. John at Mirabeau moved onto land and tore felt roofing off house under construction, then dissipated.
IDAHO Nezperce (north of), Lewis County	13	4 p.m.	6	*2-1/2					Electrical, wind, and hail	Peas, barley, clover, and grass seed fields complete loss in hail path. Clover and peas especially beaten into ground. Summer fallow badly gullied and silt carried onto highways and roads. Maximum hail depth 3 inches, with some hail still on ground next morning. Average diameter of stones 1/2 inch. Storm moved northward.
MONTANA Kalispell, Flathead County	13	5 p.m.				1	1	1	Electrical	Woman injured by lightning strike.
OREGON Scattered over northern half	13	Late afternoon -evening	200	*100			3	4	Electrical and wind	Major force of storm in central and east-central, although high winds blew over and scattered some 350 tents at church camp near Portland. Numerous power interruptions, several brush and grass fires due to lightning. Approximately 1,100 acres of grass and brush land burnt over in 1 fire along southeastern border. Some western and considerable central hay and grain lodged, some partly harvested seed crops scattered beyond recovery. Lightning damage $15,000, wind $9,000.
MINNESOTA Sibley County	13	6 p.m.	10	2000			°5	C	Hail	Damage to crops, buildings, and livestock. Storm moved eastward.
NEBRASKA Chappell (northeast of), Deuel County	13	6:30 p.m.	3	880			2	4	Hail	

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEBRASKA Nuckolls County (northeastern portion)	13	7:30-8 p.m.	8	*2-4			2	5	Hail	Hailstones 1/2 to 1 inch in diameter. Storm moved southeastward.
ILLINOIS Springfield, Sangamon County	13	7:40 p.m.					5		Wind	Severe thundersqualls caused widespread light damage to trees, utility lines, and structures. 2500 insurance damage claims filed.
NEBRASKA Central City (north of), Merrick County	13	10-11:30 p.m.	10	1760			4	4	Hail and wind	Hailstones 1/2 inch in diameter. Wind damage $6,000 to property, $16,000 to crops; hail damage $5,000 to property, $9,000 to crops. Storm moved eastward.
NEBRASKA Norfolk (5 miles south of), Madison County	13	Night	Short	880			2	4	Hail	
WASHINGTON Okanogan, Chelan, and Whitman Counties	13								Electrical	Lightning damaged several residences and set fires on 2 farms near Pullman. Several forest fires started in northern Cascade Mountains.
	13									Minor storms also reported in Harrison and Marshall Counties, Iowa; at Goodland, Kans.; at St. Paul, Minn.; near Deshler and in southwestern Clay County, northern Deuel County, southern Garden County, and northeastern Webster County, Nebr.; and at Grant, Okla.
COLORADO Weld County (northern portion)	13-14	Afternoon					1		Rain and hail	Heavy rain and hail both days, which damaged ripening grain and other crops.
ILLINOIS Central and southern portions	13-14	Night							Electrical	During thunderstorms of night and also on following day there was an unusual amount of damaging lightning activity reported from many scattered points. Damage usually light, except when farm barns struck.
SOUTH DAKOTA Black Hills	14	12:40-4 p.m.			0	0	4		Tornado, rain, hail, and funnels aloft	Tornado struck wooded area near Rochford 5 times shortly after 12:40 p.m. At least 2 other funnels did not reach ground. Heavy localized rains caused minor flooding at Spearfish and Rapid City.
NEW YORK Hudson Falls, Washington County	14	1:30-3 p.m.	3 to 4						Wind, hail, and rain	Severe thunderstorms with heavy rains, strong winds, and some hail caused damage, including falling trees, roofs, etc. No estimates of damage available but County Agent reports 60 to 70 percent damage in apple orchard, but size is not included in report. Total damage likely in neighborhood of $10,000 to property. Storm moved southward.
NEBRASKA Atkinson (11 miles north and 2 miles east of), Holt County	14	1:37 p.m.	Short	Narrow	0	0			Funnel aloft	
NEW HAMPSHIRE Bath area, Grafton County	14	2 p.m.	4-6	*2			4	3	Wind, hail, and electrical	Hail covered ground up to 3 inches deep and stones up to 1 inch in diameter. Crops ruined. Severe wind damage to building, trees, and utilities in small section of Bath and also in Upper Bath. Trees felled to east in Upper Bath, but to southwest in Bath. Storm said to be a twister by some, but no funnel seen.
NEBRASKA Sidney (near), Cheyenne County	14	2-5 p.m.	6	*2			2	4	Hail	Hailstones 1/2 to 1-1/2 inches in diameter. Storm moved eastward.
MONTANA Fort Benton and Highwood area, Chouteau County	14	2:30 p.m.	10	*1-3			1	5	Hail and wind	$30,000 damage by wind, $100,000 by hail.
MONTANA Wolf Point, Roosevelt County	14	2:30 p.m.					1	2	Wind, hail, and rain	Wind speed observed at 67 m.p.h., at Wolf Point Airport.
MONTANA Winifred, Fergus County	14	3 p.m.	16	*3			1	4	Hail and wind	Hail about size of peas. Strong wind accompanied storm. Storm moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW YORK Keeseville, Elizabethtown, and Essex, Essex County	14	3:45-4:30 p.m.	10	*2-1/2			5	5	Wind, hail, and electrical	Violent electrical storm (with some unconfirmed tornadic reports) hit area during late afternoon. Average size of hail reported as 2 inches with some to 3 inches (size of baseballs and some reported too large to fit tea cup). Severe hail damage to orchards ruined crop this year, next year, and possibly following year due to damage not only to fruit and leaves but even severe bark damage in places. Much damage to glass, roofs, and automobiles from both hail and falling trees and limbs. Elizabeth, Keeseville, and Essex areas without power or telephone services for several hours and in some cases until next day. Storm moved southeastward.
ILLINOIS Nashville, Washington County	14	Afternoon					4		Electrical	Oil storage tanks struck by lightning.
MINNESOTA Minneapolis-St. Paul, Hennepin and Ramsey Counties	14	Afternoon					4	1	Electrical	Several homes and business establishments struck by lightning. Loss at 1 home $10,000, power substation $30,000.
MONTANA Coffee Creek and Denton area, Fergus County	14	Afternoon	30	*1			1	5	Hail	
WYOMING Alva (near), Crook County	14	Afternoon					1	4	Hail	
VERMONT Central portion	14	4 p.m.	10	*2-1/2		3	3	3	Hail, wind, and electrical	Hail in Charlotte area up to 2-1/2 inches in diameter broke windows, damaged many roofs and automobiles, and stripped vegetation and trees; covered ground from 1 to 3 inches deep. Larger hail flat with scalloped edges. Lightning slightly injured 3 persons at Bristol. Trees and wires downed at Randolph and some gardens flooded. White River Junction area also hit; tree and utility lines downed. Storm moved eastward.
IDAHO Cottonwood and Camas Prairie, Idaho County	14	5 p.m.							Rain, hail, and wind	Many grain fields badly lodged by torrential rain and high wind. Extensive damage to barley and pea crops, ranging up to 70 percent on some farms. Winter wheat damage in storm track estimated at 10 to 15 percent.
INDIANA Batesville (10 miles southwest of), Ripley County	14	5:51 p.m.			0	0			Funnel aloft	Airline pilot observed funnel cloud aloft moving southeastward.
MONTANA Circle, Brockway, Watkins, and Vida areas, McCone County	14	6 p.m.					3	5	Hail and rain	About $500 damage from rain to real and personal property.
KENTUCKY Jefferson County	14	6:15 p.m.			0	0			Funnel aloft	Funnel cloud reported by pilot near Ohio River, northeast of Bowman field in Louisville.
SOUTH DAKOTA Vale, Butte County	14	7:30 p.m.			0	1	3	3	Tornado and hail	Woman bruised by flying objects. Shed and granary destroyed.
MONTANA Richland County	14	8 p.m.					1	4	Hail and rain	Hail hit scattered areas throughout county. Storm moved eastward
WASHINGTON Western portion and Cascades	14								Electrical, rain, and hail	Lightning and heavy rainfall caused numerous power and communication outages in west. Several forest fires started by lightning in Cascades. Light hail reported in a few of orchard areas of Chelan and Okanogan Counties.
	14									Minor storms also reported at Albion, Skowhegan, and Waterville, Maine; at Monett, Washington, and West Plains, Mo.; near Roy and at Thompson Falls, Mont.; in southeastern Holt County and at Schuyler, Nebr.; at Claremont, Hanover, and Lebanon, N. H.; and in Sampson County, N. C.
MISSOURI Mercer County	15	1:30 a.m.							Rain and electrical	Precipitation 1.5 to over 4 inches. Lightning killed several animals, destroyed haystacks, and barn.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
IOWA Shelby, Cass, and Adair Counties	15	1:30 a.m.					4	1	Electrical	Burned 3 homes 2 business establishments.
MAINE Aroostook County	15	Midday					3	2	Rain	Washing and flooding rains in some sections of northern Aroostook County. Limestone hit for second time within week. Soil loss from erosion, road washouts, and damage to flooded cellars resulted. Flash flood inundated first floor of old Post Office building at Limestone.
ARIZONA Wickenburg (near), Maricopa County	15	2:30 p.m.			0	0		1	Dust devil	Dust devil unroofed ranch house.
NORTH CAROLINA Craven, Duplin, Lenoir, Robeson, Wilson, and Catawba Counties	15	Afternoon					4	5	Hail, wind, and electrical	Widespread thunderstorms in connection with approaching front caused hail in several sections of east, damaging tobacco and other crops. Heavy windstorm with some hail hit Newton, Catawba County, blowing down trees, damaging roofs and powerlines. Lightning fires also in Newton.
SOUTH DAKOTA Tyndall, Bon Homme County	15	4:15 p.m.				1	3		Electrical	Lightning strike rendered occupant of house unconscious for short period. House ignited.
NEBRASKA Chadron (7 miles east of), Dawes County	15	Late afternoon			1		1	1	Electrical	Farmer struck by lightning and killed while working on tractor.
FLORIDA Miami, Dade County	15	8 p.m.			0	0			Tornado (suspected)	
SOUTH DAKOTA Corson and Walworth Counties	15	9-10:30 p.m.			0	0	3	4	Funnel cloud, hail, and electrical	Funnel cloud seen northeast of Mclaughlin. Crop damage caused by hail, other by lightning fire.
MINNESOTA Southern portion	15	P.m.							Rain and electrical	Heavy rains flooded business establishments and homes in Paynesville and washed out sections of trunk highway and railroad right of way. Lightning-started fire destroyed barn, granary, and machine shed near Austin. Minor crop damage due to flash flooding of small streams.
TENNESSEE Bells, Crockett County	15	P.m.			1	1			Electrical	Lightning struck and killed 16-year old boy playing baseball. Second boy slightly injured.
	15									Minor storms also reported near Mobile, Tallassee, Titus, and Wetumpka, Ala.; at Cleveland, Ga.; in Howard County, Iowa; at Poplar Bluff, Mo.; and in Covington and vicinity, Tenn.
ILLINOIS Central portion	16	1p.m.				2	4		Electrical	Several strikes north of Lincoln. Other lightning or minor wind damage reported from a dozen communities extending from Kewanee to Decatur.
NORTH DAKOTA Williston (15 miles northwest of), Williams County	16	4:34 p.m.			0	0			Tornado	Funnel seen.
NORTH DAKOTA Williston, Williams County	16	5:10 p.m.							Hail	Hailstones 1 inch in diameter.
MONTANA Rock Springs, Rosebud County	16	6 p.m.	10-15	*2-3			1		Hail	Considerable crop damage. Storm moved northeastward.
NORTH DAKOTA Mandan (25 miles northwest of), Oliver County	16	6 p.m.					4	4	Hail, wind, and rain	Heavy hail and windstorm in 25 mile area. Town of Center suffered heavy loss from hail, wind, and heavy rain.
MONTANA Hanover, Fergus County	16	7:30 p.m.	10				1		Hail	Storm moved northeastward. Heavy crop damage.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Chadwick, Christian County	18	3:30 p.m.					4		Electrical, wind, and rain	Church damaged by lightning.
NEBRASKA Kimball, Kimball County	18	6:05 p.m.						1	Hail	C45 plane incurred moderate damage while in air
MASSACHUSETTS Eastern portion	18				0	0	1	1	Dust devils	Dust devil at North Andover in midmorning, with no damage reported, was 2 yards wide and treetop height. Dust devil at Marlboro at 1 p.m., lifted shelter house and carried it 20 feet with but little damage.
	18									Minor storms also reported at Mobile, Ala.; at Tuckerman, Ark.; near Montrose, Colo.; at Pittsburg, Kans.; at Poplar Bluff, Mo.; near Scottsbluff, Nebr.; at Nashville, Tenn.; and at Torrington, Wyo.
MONTANA Benchland, Judith Basin County	19	12:30 p.m.	5	*1			1	4	Hail	Barley and wheat damaged, 16 to 48 percent over 5-square mile area. Storm moved eastward.
NEBRASKA Duncan, Platte County	19	1:30 p.m.	Short	Narrow	0	0	3	2	Tornado	
NEBRASKA Odessa (north of), Buffalo County	19	3-3:10 p.m.	1-1/2	1760			1	4	Hail	Hailstones rather small. Storm moved southward.
MONTANA Bozeman vicinity, Gallatin County	19	3:30 p.m.	20	*3			1	4	Hail	50 percent damage to grain and 90 percent damage to peas on some farms. Hailstones up to 1/2 inch in diameter. Storm moved eastward.
MINNESOTA Albert Lea (5 miles south of), Freeborn County	19	Afternoon			0	0			Tornado	Funnel cloud touched ground in field.
MONTANA Dillon (east of), Beaverhead County	19	Afternoon					1	4	Hail	Damage mostly to wheat.
UTAH Castle Dale area, Emery County	19	Afternoon					3		Rain	Heavy rainstorm caused flooding of low-lying farms, washed out roads, and did some damage to crops.
IOWA Sioux County	19	4 p.m.	2	*2			1	4	Hail	Destroyed crops in 4-square mile area.
KANSAS Wells (2-1/2 miles northeast of), Ottawa County	19	4-5 p.m.					4		Electrical	Modern 8 room farmhome struck by lightning and completely burned.
LOUISIANA Monroe, Ouachita Parish	19	5 p.m.				2	3	2	Wind	Thunderstorm with winds to 60 m.p.h., struck north side of town, blew down utility poles, putting large section in darkness, caused automobile crash, injuring 1 person and smashed windows injuring another.
NEBRASKA Aurora (southwest of), Hamilton County	19	5-6 p.m.	12	*2-3	0	0	4	5	Tornado and hail	3 funnels touched ground. Hailstones 3/8 to 1 inch in diameter. Tornado damage $12,000 to property, $20,000 to crops; hail damage $175,000 to crops. Storm moved northward.
TEXAS Beaumont (near), Jefferson County	19	6 p.m.			1		1	1	Electrical	Man working on farm killed by lightning.
OKLAHOMA Clinton (northwest of), Custer County	19	7:40 p.m.	2	880					Wind, rain, and hail	Severe winds blowing from varying directions unroofed and damaged buildings on several farmsteads in small area. Crops flattened and some damaged by flying debris. Peach orchard destroyed.
ARKANSAS Malvern, Hot Spring County	19	8 p.m.					6		Electrical	Lumberyard and lumber processing plant destroyed by fire set by lightning.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEBRASKA North Platte (1 mile west of), Lincoln County	19	9:05 p.m.	Short	Narrow	0	0			Funnel aloft	
OKLAHOMA Panama, Le-Flore County	19	9:15 p.m.						1	Wind and electrical	Strong winds damaged roofs, trees, and TV antennas. Lightning caused estimated $1,000 damage to 1 home, killed 10 head of cattle valued at $1,000, and caused fire which completely burned another home and contents.
MINNESOTA Southern portion	19	P.m.							Rain, electrical, and wind	Strong winds demolished farm buildings, flattened grain, and downed powerlines in Douglas County. St. Cloud WBAS reported 64-m.p.h., winds. Flooded basements and damaged streets reported in St. Paul and Hastings. Hastings home damaged by fire due to lightning strike.
SOUTH DAKOTA Union County	19	Night						4	Hail	Losses occurred southeast of Alcaster and also near Elk Point.
ALABAMA Dothan (near), Houston County	19					1	2	1	Electrical	Tree hit, man about 25 feet away on a porch knocked unconscious. Cow about 40 feet from tree killed.
	19									Minor storms also reported near Lamar, Colo.; near Harlem and at Windham, Mont.; near Atkinson, Aurora, Giltner, Hastings, Madison, Odessa, Sutherland, Wallace, and Wood River, Nebr.; and at Rattan, Okla.
KANSAS Barton County	20	1:50 p.m.					4		Wind	Severe wind squall with some evidence of tornadic violence struck farmstead 1-1/2 miles northwest of Great Bend, damaging several buildings. Large storage building near northwest city limits also damaged. 2 cars blown from road and 8-foot concrete wall levelled.
ARIZONA Tucson, Pima County	20	2:30 p.m.	1		0	0	3	1	Dust devil	Dust devil moving eastward severely damaged home and furnishings.
KANSAS Cheyenne and Sherman Counties	20	Afternoon							Wind, hail, and electrical	Wind damaged buildings over northern Sherman and southern Cheyenne Counties. Near county line, high winds and hail damaged wheat 30 percent and many other fields flattened by wind and rain. 2 large telephone cables in Goodland put out of service by lightning.
MISSOURI St. Joseph, Buchanan County	20	Afternoon				1			Electrical	Man hit by lightning, temporarily paralyzed.
KANSAS Geary County	20	3 p.m.				2			Wind and dust	Locally severe winds carried a great deal of dust. Storm struck in downtown Junction City where large front display windows exploded, and momentarily doors could not be opened against suction. Glass and other such solid debris strewn for more than 1/2 block. No funnel cloud actually observed.
MONTANA Raymond, Sheridan County	20	3 p.m.	10	*5			3	5	Hail and wind	Hailstones up to 1 inch in diameter. Wind up to 60 m.p.h., during storm. Storm moved eastward.
WYOMING Fort Laramie (11 miles north-northwest of), Goshen County	20	4 p.m.			0	0			Tornado	Over open country and on ground for very brief period; moved southeastward.
OKLAHOMA Healdton, Carter County	20	P.m.			0	0		1	Tornado (suspected)	Tore garage off house, blew side out of bathroom and moved house short distance off its foundation. Outbuildings also damaged.
	20									Minor storms also reported at Lamar, Colo.; at Luray, Kans.; near Crab Orchard, Paxton, and Sidney, Nebr.; at El Reno and Medicine Park, Okla.; near Blooming Grove, Tex.; and in Emery County, Utah.
OREGON Scattered over much of State	20-21	Afternoons of 2 days	300	200			3	4	Electrical	Series of lightning strikes touched off well over 100 fires in grass and forest lands. Practically all small and brought under control immediately, although about 2,900 acres of Bureau of Land Management experimental range land burned over in Malheur County. Power and telephone services interrupted over fairly widespread areas at several places and a few head of cattle killed by lightning.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MONTANA Scobey Vicinity, Daniels County	20 and 22							2	Hail and rain	Crop damage mostly to barley. Windows broken and roofs damaged in Scobey. Second storm in same area on 22d. Rains from 2 storms of more benefit than hail damage.
IOWA Decatur County	21	11 a.m.			0	0			Tornado (suspected)	Unconfirmed report received from CAA station.
MICHIGAN Lake Huron area	21	Afternoon			1		4	1	Wind and electrical	Strong winds downed many trees and caused scattered property damage at several localities between Alpena and Thumb area. Lightning also struck several homes. Boy drowned near Port Austin when his sailboat capsized by strong winds.
NEBRASKA Duncan (3 to 4 miles south of), Platte County	21	3 p.m.	Short	Narrow	0	0			Funnel aloft	Not known to have touched ground.
WISCONSIN Sheboygan, Sheboygan County	21	3 p.m.				1	3	4	Wind	Storm moved eastward.
MISSOURI Saline, Mercer County	21	3:30 p.m.			0	0			Tornado (suspected)	Some freakish damage such as screen pulled off of frames suggest tornadic action. Several buildings destroyed or severely damaged.
IOWA Jasper County	21	6:30 p.m.			0	0			Funnels aloft	Funnels aloft reported by public.
KANSAS Edwards County	21	6:50 p.m.			0	0			Tornado and funnel aloft	2 funnel clouds reported about 10 miles northwest of Kinsley, 1 touched ground but other remained aloft. Little or no damage resulted. Funnels visible only a few minutes.
MONTANA Between Turner and Loring Blaine and Phillips Counties	21	7 p.m.	30	*4-1/2			1	5	Hail	Storm began in Canada. Ground covered up to 1 inch depth with hail. Hailstones up to 1 inch in diameter. Storm moved southeastward.
FLORIDA St. Petersburg, Pinellas County	21	P.m.				1			Electrical	1 person injured by lightning bolt.
UTAH Sevier County	21								Hail	Hail 1/4 to 1/2 inch in diameter in Central and Richfield farming areas did extensive damage to crops. Losses ranged from 50 to 100 percent in some areas.
	21									Minor storms also reported at Dinnehotso, Ariz.; at Grand View, Idaho; in Black Hawk County, Iowa; at Winfield, Kans.; at Gilman City, Mo.; at McAlester and Waurika, Okla.; in Kress and Plainview areas, Tex.; and at Spanish Fork, Utah.
KANSAS Pratt County	22	1-2:30 a.m.				1			Electrical	2 houses about 2 blocks apart struck by lightning about same time. Man injured slightly at 1 house. At the other, shingles torn from roof and some timbers in upper portion of house split. A number of rural telephone lines out of service for a while.
OKLAHOMA Friendship, Jackson County	22	7:30 a.m.						1	Wind, rain, and electrical	Strong winds damaged outbuildings, TV antennas, and utilities. Storm moved northeastward.
MICHIGAN Lower southern portion	22	Day					4	5	Rain	Scattered heavy rains caused flooding in several localities, particularly in Flint area. Wheat and bean crops harmed and wheat harvest delayed in some areas.
MASSACHUSETTS Westfield, Hampden County	22	3 p.m.	2	300	0	3	4	1	Dust devil, wind, rain, and electrical	Severe thunderstorm preceded by whirling column of dust and debris which twisted many branches from trees. Tree fell against home, another onto automobile, injuring 1 person. Many wires downed. Other injuries in automobile accident, due to storm. Storm moved southeastward.
CONNECTICUT Western and central portions	22	3 to 4 p.m.			1	1	3	1	Electrical and wind	Lightning killed boy walking across open field in Manchester. 1 of 2 companions knocked unconscious, but recovered. Third youth unhurt. Sudden wind of estimated gale force leveled 1 large tent and 9 smaller ones at Southbury fair grounds. Considerable wind damage to trees and powerlines in nearby towns of Newton, Bethel, and New Milford. Power and telephones disrupted for about 1 hour to over 50 percent of users.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MONTANA Plentywood and Antelope area, Sheridan County	22	4 p.m.	15	1,000			1	5	Hail and rain	$1,000 property damage from flooded basements. Storm moved northeastward.
NEW YORK Hudson Valley	22	Late afternoon							Wind, rain, hail, and electrical	Thunderstorms brought some hail and heavy rains to scattered areas. Hail reported in Spencertown, Kinderhook, and Steward Field. No estimate of crop or property damage made, but it is likely less than $10,000 in each category and possible in combined total.
MONTANA Galata, Toole County	22	5:30 p.m.	15-20	*1-3			1	4	Hail	Hailstones 1/2 to 3/4 inch in diameter. Storm moved east-northeastward.
ILLINOIS Richland and Shelby Counties	22	6:30 p.m.			1				Electrical	Man struck by lightning at Dundas about same time as 2 lightning-struck barns burned near Cowden.
MASSACHUSETTS Central and eastern portions	22	P.m.					4	1	Electrical, wind, and rain	Locally severe thunderstorms, with high winds struck numerous communities. Trees and wires felled and some lightning damage in Worcester, West Brookfield, Palmer, Ware, Monson, Southbridge, Dudley, Middleboro, Segreganset, and Easton. Hail also in some areas, but little damage. Short duration intense rains caused a few road washouts.
COLORADO Colorado Springs, El Paso County	22	Night							Electrical	Heavy electrical storm over city caused much damage. Lightning struck 2 homes, setting 1 afire and damaging the other.
INDIANA Michigan City, La Porte County	22				1		0	0	Electrical	Man killed by lightning while mowing grass along highway.
	22									Minor storms also reported in Tule Lake Basin, Calif.; at Wallace, Idaho; at Fulton, Kans.; at Hartshorne, Okla.; and at Mount Pleasant, Tex.
MISSOURI Sikeston (7 miles south of), Scott County	23	11:25 a.m.			0	0			Funnel aloft	Moved northeastward.
LOUISIANA Lake Charles (10 miles west of), Calcasieu Parish	23	2 p.m.			0	0			Funnel aloft	Observed for about 5 minutes; did not touch ground; 10 miles west of Lake Charles.
COLORADO Eastern portion	23	Afternoon			0	0			Funnels aloft and thunderstorms	Several funnel clouds observed, one 25 miles east-northeast of Denver, and several others in vicinity of Kennesburg, Roggen, and Nunn. Thunderstorms in Denver, Colorado Springs, and other points caused flooding and some damage to powerlines and telephones.
MONTANA Richland and Dawson Counties	23	Afternoon					1		Hail	Some sections reported 50 percent hail damage in Savage area. Also damage reported around Glendive.
NORTH CAROLINA Alamance, Lee, Lenoir, and Wayne Counties	23	Afternoon-night					4	4	Electrical, wind, and rain	Roofs and buildings destroyed and damaged by wind and lightning. Storm drains overloaded by downpours. Crop damage more than compensated by beneficial effects of rain.
UTAH Duchesne County	23	4 p.m.					4		Electrical	Church building destroyed after lightning strike.
ARKANSAS Jacksonville, Pulaski County	23	6:10 p.m.				1	1	1	Electrical	Man injured when lightning fired heavy dynamite charge that he was setting.
MONTANA Comertown and Westby areas, Sheridan County	23	7 p.m.	15	880			3	4	Hail	About 20 percent damage to crops. Hailstones up to 1 inch. Storm hit or miss over area; moved southeastward.
	23									Minor storms also reported at Charleston and Cape Girardeau, Mo.; in southern Wibaux County, Mont.; at Bristol, Tenn.; and at New Ulm, Tex.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Between Ralls and Lorenzo, Crosby County	24	12:30 p.m.			0	0			Funnel aloft	Funnel reported moving northwestward.
COLORADO Walsenburg (northwest of), Huerfano County	24	Afternoon							Rain	Violent rain and hailstorm washed out railroad bridge, a stretch of mine tracking, and sent streams of water 8 inches deep over highway.
NEBRASKA Crookston (near), Cherry County	24	3:05 p.m.	Short	Narrow	0	0			Funnel aloft

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
FLORIDA Tampa, Hillsborough County	25	P.m.					5		Electrical and rain	Lightning-set fire caused damages estimated at $100,000 as livestock market burned.
ARIZONA Safford and Thatcher, Graham County	26	Morning					5	5	Rain	Heavy rains caused flooding of homes, stores, and farm lands. Storm moved northwestward.
COLORADO Washington, Lincoln, and Yuma Counties	26	3:23 -6:40 p.m.							Hail and rain	Heavy rain and hail covered large area in Washington, Lincoln, and Yuma Counties. 5-1/2 inches of rain with intermittent hail reported in Akron vicinity. Damage reported as major.
MASSACHUSETTS southeastern portion	26	P.m.					3		Rain	Washing and flooding rains in several towns, including Middleboro and Lakeville, caused several serious road washouts and many small ones. Much flooding of cellars.
CONNECTICUT Eastern portion	26	Early evening							Electrical and hail	Scattered thunderstorms moving across State concentrated their fury at Danielson at about 7 p.m. Rainfall totaling 1.5 inches in less than 30 minutes accompanied by golf-ball-size hail. Streets and nearby basements flooded to 4-foot depth forced evacuation of family from low-level apartment and abandonment of several stalled automobiles. Hail damage confined to small gardens and shrubbery as unmelted stones remained after 24 hours. Scattered but light wind damage to powerlines. Storm moved eastward.
RHODE ISLAND South-central portion	26	Early evening							Electrical and rain	Storm concentrated in Warwick-East Greenwich areas. Rainfall amounts highly variable within distances of a few miles. Streets flooded in Crompton and only trace of rain at Fiskeville, 3 miles north; Quonset Naval Station received 3.10 inches and WBAS 10 miles north measured 0.26 inches. Heavy downpours washed out several sidewalks and roads, flooded dairy plant, and stalled cars at heavy traffic points. Lightning struck 2 houses, barn, police radio antenna, and scattered powerlines. Telephones out to 2,500 users from Warwick southward to North Kingstown. Storm moved eastward.
NEBRASKA Atkinson (southwest of), Holt County	26	Night						1	Electrical	Barn struck and burned.
COLORADO San Juan Basin	26								Rain	Week of rain in San Juan Basin caused flood of Animas and Florida Rivers, Junction and Vallecito Creeks, and others. Heavy damage to roads, bridges, and other property and farmlands reported.
	26									Minor storms also reported at Bethany, Mo.; and at Las Vegas, Nev.
OREGON Scattered, largely in northeast quadrant	26-27	Afternoons of 2 days	150	*100			4	4	Electrical	State again dotted at many points by fires, resulting from 2 days of frequent and widespread lightning. Several forest fires started in Blue Mountains, but little or no timber lost. Additional 1,500 acres of Bureau of Land Management range land burnt over, also several hundred acres of private grass land and some grain fields. At least 2 homes destroyed.
SOUTH DAKOTA Sioux Falls and Delmont, Douglas and Minnehaha Counties	27	3-6 a.m.							Electrical	At 3 a.m., minor lightning and fire damage to residence at Delmont. At 5:45 a.m., lightning believed to have started fire which totally destroyed Sioux Falls grandstand insured for $40,000. Loss considered to be much higher.
MISSOURI Chillicothe, Livingston County	27	5:05 a.m.							Rain and electrical	Precipitation varied in vicinity from 1-1/2 to 3-1/2 inches. 2 houses destroyed by lightning. Considerable local flooding.
MASSACHUSETTS Martha's Vineyard	27	Noon					3	1	Rain and hail	Washing and flooding rains struck Tisbury, Oak Bluffs, and Vineyard Haven. Small amount of hail fell.
LOUISIANA Lake Charles (5 miles south of), Calcasieu Parish	27	3 p.m.			0	0			Funnel aloft	

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

JULY 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW JERSEY Union County (north-central portion)	27	Afternoon			2				Electrical	2 boys killed when struck by bolt of lightning while playing in woods near their home in Roselle Park.
NORTH DAKOTA Mountrail County	27	Afternoon					4	1	Wind	2 grainaries completely wrecked.
NEW YORK Central portion	27	Afternoon -evening						5	Wind and hail	Slashing hail and wind accompanied thunderstorms, destroying some crops with usual other damages. Heaviest activity in eastern Wayne and northern Cayuga Counties and in Addison-Bath sections of south-central counties.
NORTH DAKOTA Wells County	27	7 p.m.			0	0			Funnel aloft	Funnel sighted 3 miles west of weather station.
MASSACHUSETTS Townsend, Middlesex County	27	P.m.					3	3	Rain, wind, and hail	Considerable local damage from flooding and washing rains. Trees damaged by wind. Wind and hail flattened garden crops.
MAINE Hamlin, Aroostook County	27	P.m.						4	Hail, rain, and wind	Hail, size of walnuts piled in drifts up to 2-1/2 feet high in fields, ruined fields of oats, peas, and potatoes.
	27									Minor storms also reported at Lawson and Tipton, Mo.
IOWA Des Moines, Polk County	28	8 a.m.			1		1	1	Wind	Man killed by high tension line felled by tree limb as it was blown down.
PENNSYLVANIA Southeastern counties	28	A.m.-p.m.					3	1	Wind and rain	Widespread thunderstorms caused only minor damage. Near Philadelphia, winds toppled large tent and several trees, while near Allentown 5-inch downpour flooded streets and house basements.
SOUTH DAKOTA Custer State Park	28	1-2 p.m.					4	4	Hail, rain	Heavy rain caused local flooding. Hailstones which reached golfball size, accumulated 2 feet deep on level and up to 4 feet in drifts. Small animals including several hundred rabbits killed. Most destruction in area south of Hermosa, measuring 10 miles long and 5 miles wide.
NEW JERSEY Camden and Burlington Counties	28	Midafternoon					4		Wind, rain, and electrical	Wind blew down tent of summer theater, also blew down trees and disabled power- and communications lines. Driving rain flooded some streets and highways, stalling traffic. Lightning set fire to 1 home and tore hole in roof of another. Damage by wind $15,000, by rain $8,000, and by lightning $2,000. Storm moved northeastward.
MARYLAND Charlotte Hall, St. Mary County	28	2:30-4:15 p.m.	4	*2					Hail	Hail damage to tobacco. Hailstones from 1/2 to 1 inch in diameter fell in area 8 to 10 square miles. Storm moved southeastward.
MARYLAND Glen Burnie, Anne Arundel County	28	Afternoon				1	4		Electrical and hail	Violent thunderstorm accompanied by destructive fire damage to 2 homes and minor damage to others within period of 1 hour. Hail up to 1/2 inch in diameter reported. Man standing in doorway of his home knocked halfway across living room by bolt of lightning which struck tree in his front yard. He was taken to hospital for treatment but was released shortly afterward.
SOUTH DAKOTA Perkins, Corson, Potter, Edmunds, and McPherson Counties	28	Afternoon						5	Hail	Hailstones reached walnut size.
MARYLAND Baltimore County	28	4-5 p.m.					4		Electrical and wind	Violent thunderstorms touched off several major fires and brought extensive wind damage to Baltimore County. Lightning started blaze which severely damaged country mansion near Monkton. $6,600-chicken house near Baldwin and barn near Monkton destroyed. Strong winds toppled trees north of Cockeysville and knocked out over 600 telephones. Storm put additional 150 phones out of commission in Dundalk and Essex districts.
IOWA Southeastern portion	28	Evening					4	3	Rain	Heavy rain damaged buildings and crops and killed livestock.

See footnotes at end of table.

FLORIDA Daytona Beach Volusia County	30	Early afternoon			0	0	3		Waterspout	Moved northeastward along Halifax River.
COLORADO Yuma (south of), Yuma County	30	Afternoon			0	0			Tornado	Small tornado tore down buildings, windmills, and house; moved eastward.
PENNSYLVANIA Western and eastern sections	30	Afternoon				1	°4	C	Hail and electrical	Damage by hail $1,000 in southwestern counties. Lightning struck several homes and barns, but caused only minor damage.
SOUTH DAKOTA Clear Lake, (3 miles east of), Deuel County	30	Late afternoon							Wind and hail	Strong northeast wind wrecked large barn and killed 133 chickens.
NEW YORK Lower Adirondacks and Hudson Valley area	30	Late afternoon-evening			3			6	Wind, rain, hail, and electrical	During afternoon and evening severe thunderstorms brought scattered areas of hail, 1/2 to 1-1/2 inches in diameter, strong, local winds and severe lightning to scattered areas of eastern New York from southern Adirondacks southward through mid-Hudson Valley. Hail reported in numerous areas from lower Adirondacks southward through Dutchess County. Power- and communication lines downed in several areas. Lightning killed 3 persons north of Glens Falls.
TEXAS Trent (near), Taylor County	30	9 p.m.			0	0			Funnel aloft	
PENNSYLVANIA Scranton area, Lackawanna County	30	10:30 p.m.					4	1	Electrical	Several barns fired by lightning.
MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	30	P.m.				3	5	1	Electrical	Lightning caused damage at widely scattered points over area. Boy slightly injured at East Corinth, Vt., and 2 women severely burned in Burlington, Mass., by lightning. Lightning inflicted heavy damage to power- and phone lines. Power substation at Scituate, Mass., heavily damaged. $35,000 loss from fire at barn of Leominster, Mass., City Infirmary. Cottage at Wellfleet, Mass., struck 6 times by bolts.
COLORADO Lincoln, Elbert, Douglas, El Paso, and Arapahoe Counties	30								Rain	Rain up to 2-1/2 inches fell in watershed of Kiowa and Cherry Creek. Some damage to roads, culverts, and bridges. Due to Kiowa Flood Control Project and Cherry Creek Dam, damage held to minimum. Colorado Springs reported $5,000 damage to streets and alleys in northeastern portion.
MONTANA Hill County (northern portion)	30						1	3	Rain, wind, and hail	Military unit operating in area reported 140 m.p.h., wind. Storm lasted 45 minutes. Some hail. Storm moved east-northeastward.
	30									Minor storms also reported between Santa Maria and Zaco substation, Calif.; at Hamden, Conn.; at West Plains, Mo.; in Snyder area, Tex.; and in Mingo County, W. Va.
ARIZONA Phoenix, Maricopa County	31	Afternoon			1		1	1	Heat	Man died of heat prostration.
NEW JERSEY Clementon Borough, Camden County	31	3:10-4 p.m.	** 400	300		3	4		Wind, rain, and electrical	Isolated thunderstorm struck Clementon Borough at 3:10 p.m. E.D.T. Winds estimated to have reached 75 m.p.h., or higher in gusts. Large portions of roofs blown off motion picture theater, bank, warehouse, and 3 other buildings in business block. Plate-glass windows blown out of 3 business establishments. Front of arcade in amusement park blown down, and 2 cashiers' booths in same park blown over. Several large trees uprooted. 1 tree upset tool house, as tree roots came up from ground. Lightning struck 1 large tree, top of which fell on private residence. Heavy rain damaged interior of unroofed buildings and buildings with windows blown out. Damage by rain also in private homes. Eyewitnesses say that rain driven almost horizontally across interior of some rooms before windows closed. 3 persons injured in amusement park by flying debris. 1 home struck by lightning, with minor damage by fire as a result. Wind damage $25,000, rain $4,000, lightning $1,000. Storm moved east-northeastward.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WYOMING Auburn (north of), Lincoln County	31	3:15-3:30 p.m.	3	*1			2	5	Hail	Crop destruction complete. Storm moved northeastward.
NEW JERSEY Monmouth County, (eastern portion)	31	Late afternoon					4		Wind, rain, and electrical	Trees and utility poles blown down. Electrical substation and 2 homes struck by lightning. Heavy rains flooded streets, highways, and some storm sewers. Wind damage $3,000, rain $1,000, and lightning $6,000.
IOWA Dubuque County	31	5:30 p.m.					5	1	Wind and rain	Damaged homes, highways, and utilities.
CONNECTICUT Western and central portions	31	Early p.m.					4	5	Electrical, hail, and wind	Thunderstorms caused scattered but considerable property and crop damage from New Canaan northeast to Windsor. About 75 acres of Tobacco, corn, and truck crops sustained heavy to total damage in Windsor-South Windsor area. Loss estimated at $75,000. 2 dairy barns and contents destroyed by lightning-caused fires. 2 curing barns in Windsor struck, endangering some 60 workers. About 12 homes hit, but fire damage slight. Lightning and fire damage set at $2,000 to homes and $6,000 to barns. Widespread but localized power failures lasted from 1 to 4 hours in affected area. Storm moved eastward.
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	31	P.m.			5	1	5	4	Electrical, wind, rain, hail.	Severe thunderstorms hit many spots in widely scattered areas. Said to be worst storm in over 50 years at Springfield, Mass., where $25,000 damage from flooding rain resulted and in Hull, Mass., where 45 homes struck by lightning. Estimated 200 buildings struck in Massachusetts, and many in northern New England. Man thrown 10 feet by lightning bolt at Quincy, Mass. 1 killed at South Weymouth, Mass., in automobile accident blamed on storm and 4 killed in airplane crash at Brownington, Vt., believed to be caused by thunderstorm. $62,000 fire loss to barn and livestock at Middlebury, Vt., from lightning. $5,000 loss to barn from wind at Hamlin, Maine, with some crop damage. Hail in many places, 1-inch size reported at Haverhill, Mass., with largest crop loss at Rumford, Maine. Hail loss estimated at $5,000. Utility lines hit in many areas, with 2,000 homes without power in Nashua-Hudson, N. H., section. Trees and limbs felled in many communities. Severe lightning damage to electrical appliances in homes, said to be of unprecedented extent in some localities.
	31									Minor storms also reported at Moline, Ill.; and in Black Hawk County, Iowa.

* Miles instead of yards.
** Yards instead of miles.
° Includes crop damage.
C Crop damage.
† Storm damages are placed in categories varying from 1 to 9 as follows:

Category	Damage
1	Less than $50
2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

JULY 1957

The floods in the Chicago area on the 12th caused a loss of 9 lives and heavy property damage. Near record crests occurred in the lower Meramec Basin in Missouri during the first 2 days of July. Major flooding occurred in the Saline Basin In Kansas from the heavy June rains. The Wakarusa River approached within 2 feet of the record July 1951 flood. The most damaging flood of record occurred in the White and Wabash Rivers in Indiana.

ST. LAWRENCE DRAINAGE

Lake Michigan.--Torrential rains during the night of the 12th in the Chicago, Ill., area caused streams in the area to rise rapidly. The Chicago River in the Loop rose 6 feet. Sluice gates at the dam at Lockport, Ill., were opened lowering the level of the Sanitary Canal 5.5 feet in an effort to prevent flooding in the downtown district. Flood waters were also discharged through four turbines at the Lockport Power Plant. Sluice gates at the Des Plaines River were opened near Lockport to hasten the runoff of flood waters. Observers indicated that this flood was much worse than the October 1954 flood. Hundreds of basements were flooded. The Congress Street Expressway was blocked by water up to several feet deep in places. Hundreds of autoists were marooned by the rising waters. At least 9 persons lost their lives in this flood.

Minor flooding occurred on the Red Cedar in Michigan from the 12th to the 14th and on the Tittabawassee at Midland, Mich., on the 9th and 10th. Only minor damage was reported.

The heavy rains over the Grand River Basin on the 8th caused moderate rapid rises on streams in the basin with lowland flooding at Ionia, Mich., on the 14th. It approached within 3 feet of the official flood stage and the lowland flooding was confined to the parking area of the Ionia fairgrounds. Damage was minor.

EAST GULF OF MEXICO DRAINAGE

The rise in the Pearl River at Bogalusa and Pearl River, La., during the first part of July was due to rainfall on the 2d and 3d plus accumulated runoff from the late June rains. The combined flow produced a brief period of slightly above flood stage on the Mississippi side of the Pearl River, mostly in forested areas, from above Bogalusa, La., to the coastal marshes. No damage of consequence was reported.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--The abnormally heavy rains of June 16-17 and June 21 and 22, continued to affect the rivers with the Minnesota River remaining above flood stage from New Ulm to Savage, Minn., until the middle of July. The Mississippi River exceeded flood stage at St. Paul and Hastings, Minn., from June 27 to July 4. It did not reach flood stage in the reach below.

Heavy rains in central and southeastern Minnesota on July 16 caused minor flooding on the Shakopee Creek and the Zumbro and Root Rivers in Minnesota and the Upper Iowa River in Iowa on the 16th and 17th. Some damage was reported to crops and highways.

The minor flooding on the Iowa River at Marshalltown, Iowa, on the 3d and 4th was due to heavy rain (3.7 inches) during the mornings of the 3d and 4th.

The flooding in the Illinois Basin between the 13th and 26th was due to heavy precipitation in the headwaters during the 24-hour period ending on the morning of the 13th. Rainfall amounts ranged from 1.85 inches to 6.24 inches. Additional heavy rain occurred over the lower portion of the basin during the following 24-hour period. Flood stage in the upper portion was exceeded by 6.5 to 11 feet.

Near record flooding occurred in the Meramec Basin at Pacific and Valley Park, Mo., on the 1st and 2d. The crest of 32.0 feet at Valley Park, Mo., was the 4th highest of record and the crest of 25.0 at Pacific, Mo., was the 3d highest. In the Bourbeuse Basin at Union, Mo., the crest of 24.6 feet was the second highest stage of record.

Missouri Basin.--Local flooding occurred along Antelope Creek and Salt Creek in Lincoln, Nebr., and along Wahoo Creek near Wahoo and Ithaca, Nebr., due to locally heavy rains in eastern Nebraska on the morning of the 1st. Damage was minor.

Severe local flooding occurred on several tributaries in the Kansas River Basin during July. The Solomon River at Beloit, Kans., rose 5.8 feet above bankfull on the 3d, with considerable flooding upstream to the lower portions of the North Fork and South Fork. The major flooding which developed in the Saline Basin by the end of June crested at Tescott, Kans., on the 1st at a stage of 29.55 feet; within 0.5 foot of the record 1951 crest of 30.06 feet. For a detailed report of this flood, see the June report.

Major flooding occurred on the Wakarusa River between the 10th and 12th from the heavy rains (4 to 6 inches) on the 10th. The crest of 29.75 feet near Lawrence, Kans., on the 11th approached within 2 feet of the record July 1951 flood. Camp Creek, a tributary of the Wakarusa, overflowed at Richland, Kans., early on the 10th. Shunganunga and Martin Creeks overflowed into the residential and business area in Topeka on the same date, necessitating Red Cross aid for approximately 40 families.

Flash flooding occurred in the Republican Basin on Peet Creek during the late afternoon and evening of the 20th. Estimates of 5.5 inches occurred in the area 5 miles east of Clifton, Kans.

Ohio Basin.--Major flood crests were moving down the middle reaches of the White and Wabash Rivers in Indiana as the month began due to unusually heavy rains late in the previous month. At a number of points, crests were the highest since the great flood of 1950. Secondary crests occurred over the upper reaches of the White and Wabash Rivers from heavy rains (1 to 1.5 inches) on the 4th-5th. The crests for this rise were generally much lower than the earlier crests. Heavy thunderstorms during the morning of the 17th on the Tippecanoe River caused the highest stage (14 feet) near Delphi, Ind., since records began in 1936. Heavy damages occurred from the flooding along the larger streams. The crop damage alone has been estimated as far in excess of the total dollar damage attributed to the 1913 flood, the previous most damaging flood of record. In many areas the third planting of corn was destroyed and since it occurred so late in the season it precluded the planting of another crop.

White Basin.--The flooding on the White River in the reach at Clarendon, Ark., and below was a continuation of the June flood. Damage was limited to continued loss of the use of fields in lowlands adjacent to the streams for agricultural purposes.

Arkansas Basin.--The upper Arkansas and tributaries in Colorado remained critical during the entire month of July, especially from the headwaters to John Martin Dam (Caddoa Reservoir). This was a continuation of the high water that developed during the latter part of June and was due to the excessive runoff from the unusually large snow pack on the higher mountains. Areal precipitation ranged from slightly under 2 inches to 2.5 inches. The overflow of Cottonwood Creek at Buena Vista on the 1st and 2d was described as the worst in many years. The overflow of Delagua Creek in Delagua Canon, Colo., area was due to a cloud-burst on the 10th. Traffic on U. S. Highway 85-87 north of Trinidad, Colo., was slowed down for several hours as water spilled over the highway to a depth of 1 foot.

The slight overflow of the Salt Fork at Tonkawa, Okla., during the first few days of the month was due mainly to releases from Great Salt Plains Reservoir. The Cimarron River at Perkins, Okla., overflowed for the 8th time in the last 3 months. The flooding in July was minor and no damage resulted. The flooding on the Arkansas from Webbers Falls, Okla., to Van Buren, Ark., was due to continued releases of water at upstream reservoirs.

Red Basin.--The flooding on the Red River at Alexandria, La., during July was the recession type and was due to heavy upstream rains during the previous month. The Sulphur River receded below flood stage at Naples, Tex., on the 4th but continued in flood at Texarkana, Tex., the entire month. Most of the damage from the flooding occurred during June. The Black River at Jonesville, La., was above flood stage and falling as the month opened and remained above flood through the 11th.

Lower Mississippi Basin.--The flooding on the St. Francis River between the 2d and the 17th was due to heavy rain in the upper basin on June 30. The heaviest amount reported was 6.97 inches at Arcadia, Mo.; other stations in the basin reported amounts between 2 and 6 inches. Additional rain was reported on July 1 and 2. Most of the damage was in the Missouri reach of the basin. The overflow was confined, primarily, to areas inside levees and floodways, except in unprotected areas near St. Francis, Ark.

WEST GULF OF MEXICO DRAINAGE

There were no new floods that developed in this drainage area during July. As the month began the Mermentau River was out of its banks at Mermentau, La., and three-fourths bankfull at Lafayette, La. The Nezpique Bayou at Basile, La., was over bankfull, but no overflow of any consequence occurred. The Calcasieu was near bankfull throughout its course as a result of heavy rains from hurricane "Audrey" with some light flooding reported at Old Town Bay, La. In the Trinity River in Texas, the flow from the upstream reservoirs kept the stream above flood stage from Dallas to Trinidad, Tex.

GULF OF CALIFORNIA DRAINAGE

Colorado Basin.--Light flooding occurred along the San Juan River at Pagosa Springs, Colo., and Farmington, N. Mex., during the latter part of July due to heavy rains. No damages were reported.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 13 obs., 31,883 m., -36.1°C.
2/ 10 mb., 8 obs., 31,651 m., -37.2°C.
3/ 10 mb., 15 obs., 32,082 m., -33.8°C.
4/ 10 mb., 18 obs., 32,151 m., -31.7°C.
5/ 10 mb., 12 obs., 31,940 m., -34.8°C.
6/ 10 mb., 16 obs., 31,748 m., -37.5°C.
7/ 10 mb., 16 obs., 31,723 m., -36.0°C., 90 dir., 19.0 Speed
7 mb., 5 obs., 34,186 m., -32.1°C.
8/ 10 mb., 16 obs., 31,505 m., -40.1°C.
7 mb., 5 obs., 33,933 m., -36.4°C.
9/ 10 mb., 13 obs., 31,742 m., -36.3°C.

20	14	26,734	-46.3		90	45.7
15	7	28,642	-41.7			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 9 obs., 31,846 m., -31.1°C.
2/ 10 mb., 6 obs., 31,355 m., -40.8°C.
3/ 10 mb., 13 obs., 31,673 m., -36.1°C., 90 dir., 35.0 speed
4/ 10 mb., 11 obs., 31,510 m., -41.0°C.
5/ 10 mb., 11 obs., 32,003 m., -33.4°C.
6/ 10 mb., 7 obs., 31,509 m., -37.4°C.

15-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 15 obs., 31,854 m., -36.2°C.
2/ 10 mb., 8 obs., 31,141 m., -46.5°C.
3/ 10 mb., 7 obs., 31,676 m., -36.4°C.
4/ 10 mb., 16 obs., 31,899 m., -34.8°C., 86 dir., 24.7 speed
7 mb., 10 obs., 34,425 m., -31.2°C.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 10 obs., 31,608 m., -39.2°C.
2/ 10 mb., 9 obs., 32,048 m., -33.5°C.
3/ 10 mb., 8 obs., 31,610 m., -38.0°C.
4/ 10 mb., 14 obs., 31,686 m., -39.3°C.
5/ 10 mb., 7 obs., 31,732 m., -36.0°C.
6/ 10 mb., 12 obs., 31,745 m., -36.6°C.

15	19	28,633	-42.9		86	49.4							25	28,772	-43.2		90	34.8	11	29,025	-39.5				16	29,016	-38.9		86	25.6

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 10 obs., 31,725 m., -35.3°C.
2/ 10 mb., 5 obs., 31,814 m., -38.3°C.
3/ 10 mb., 16 obs., 31,647 m., -37.0°C., 91 dir., 27.4 speed.
4/ 10 mb., 6 obs., 31,387 m., -38.3°C.
5/ 10 mb., 10 obs., 31,517 m., -38.4°C., 86 dir., 43.1 speed
6/ 10 mb., 7 obs., 31,827 m., -33.3°C.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

† New pyrheliometer installed July 2, 1957, with correction of 1.07.
* Starting July 1, 1957, Pyrheliometer calibration increased 2%.
‡ Values adjusted to conform to the international scale of Pyrheliometry.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

SOLAR RADIATION DATA

NET RADIATION

Table 32.--Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

JULY 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	400	348	366	386	*412	433	404	400	377	391	397	387	370	400	*247	*418	341	205	420	388	402	387	*376	*114	364	359	328	351	390	420	387	367

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

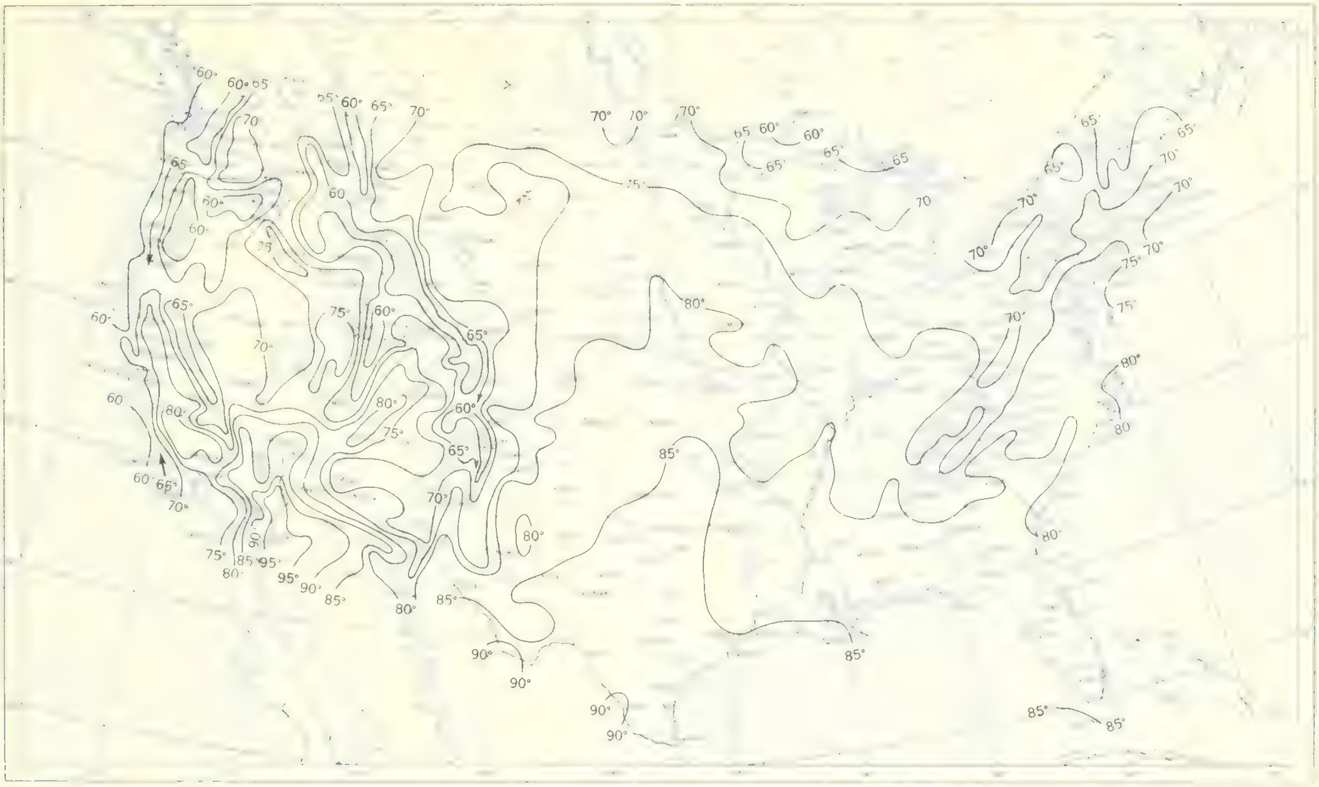
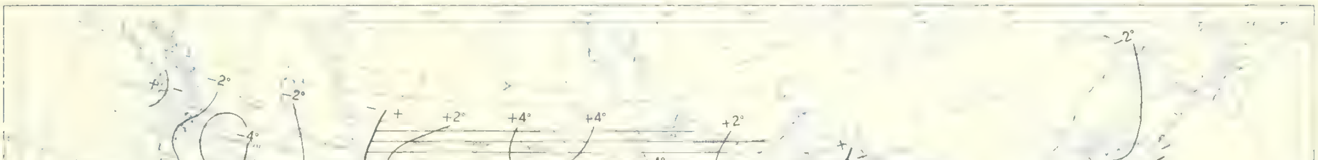
* Data after August 1, 1957, decreased by 1.5% by reason of correction of pyrheliometer constant.

NWRC, Asheville, N. C. --- 10/11/57 --- 1900

Chart I. A. Average Temperature (°F.) at Surface, July 1957.



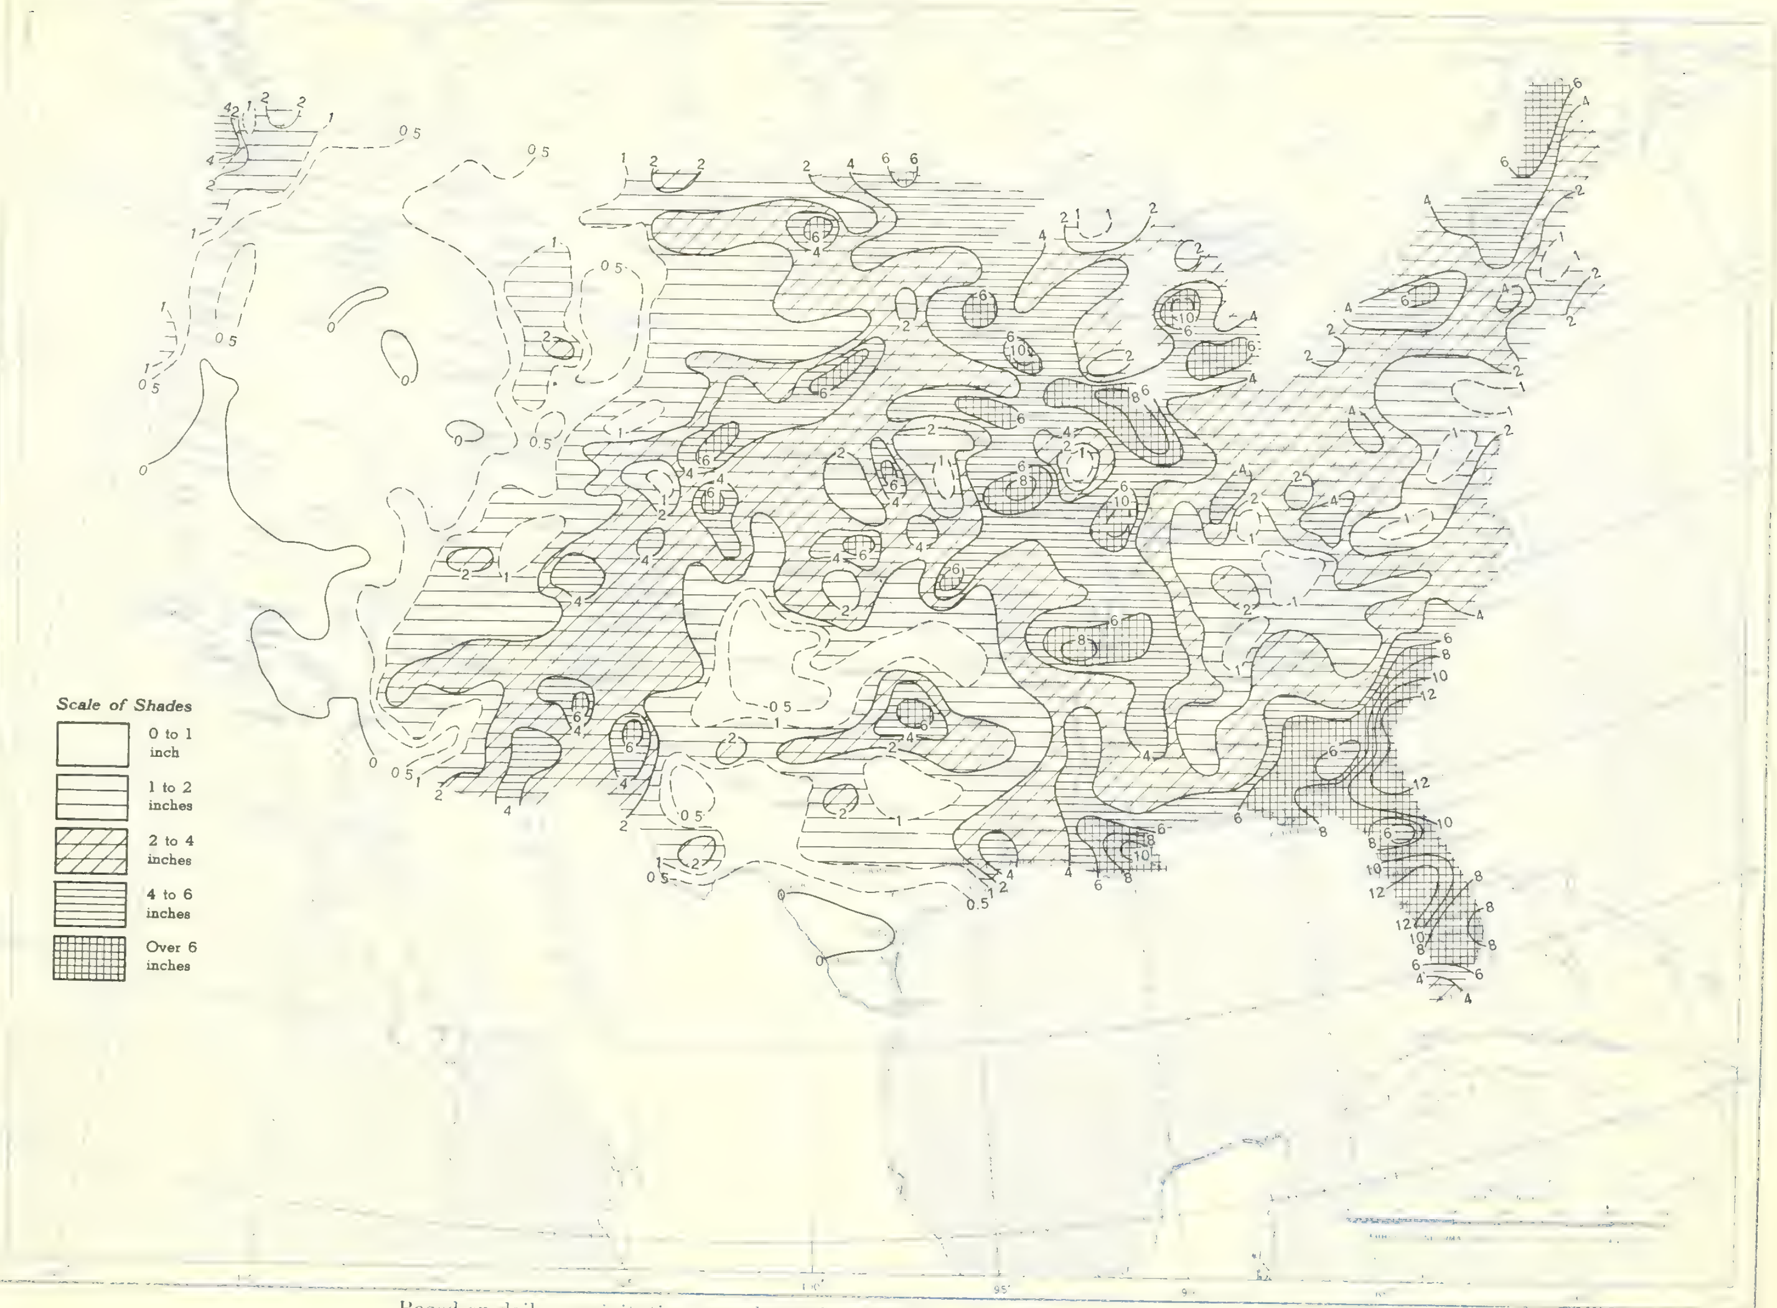
B. Departure of Average Temperature from Normal (°F.), July 1957.



A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.

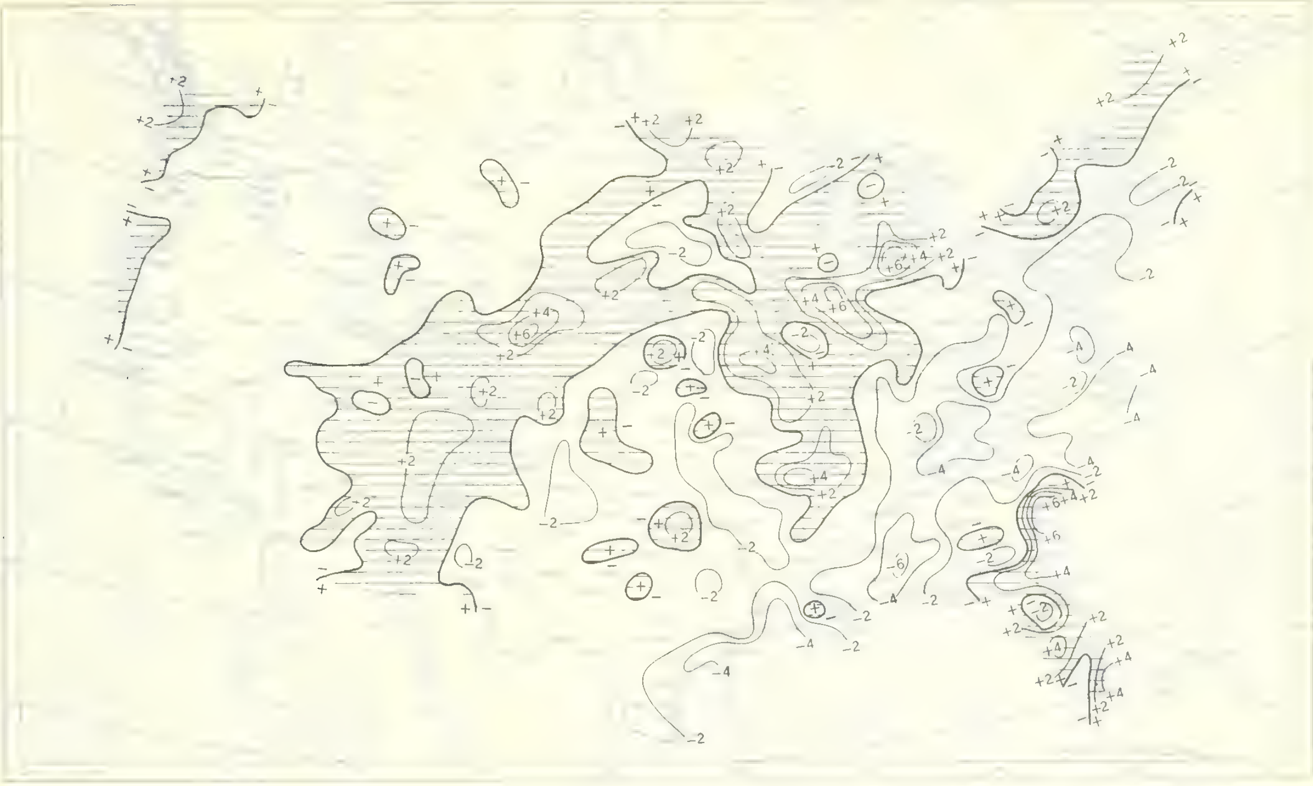
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), July 1957.

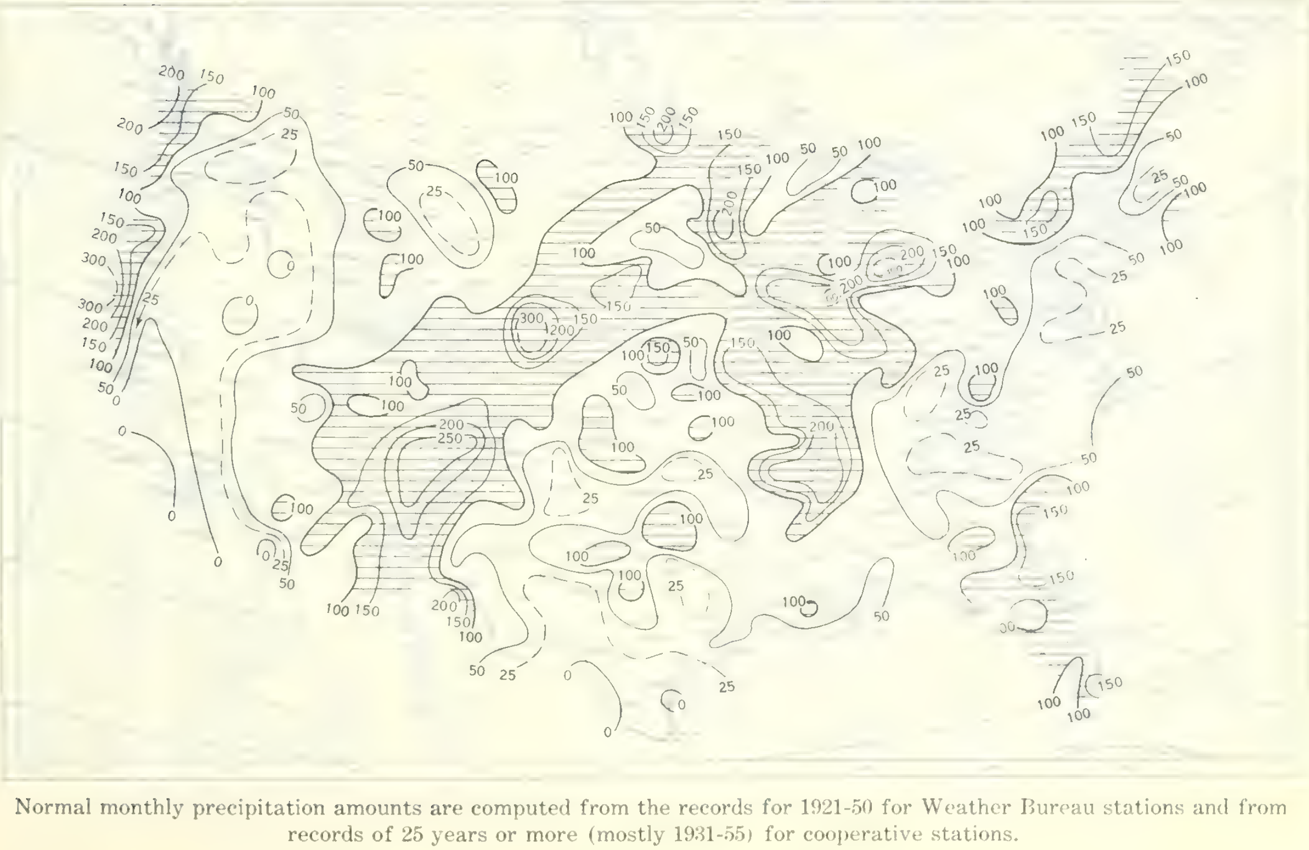


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), July 1957.

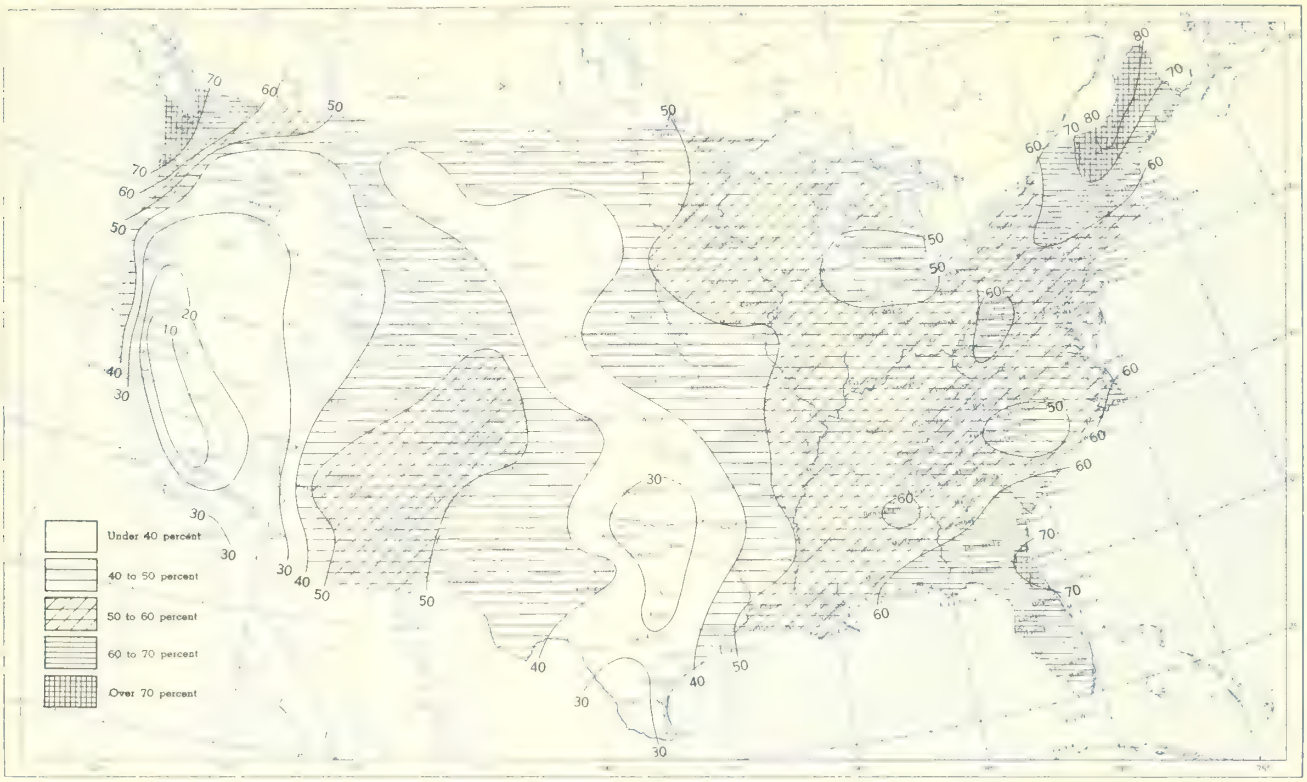


B. Percentage of Normal Precipitation, July 1957.

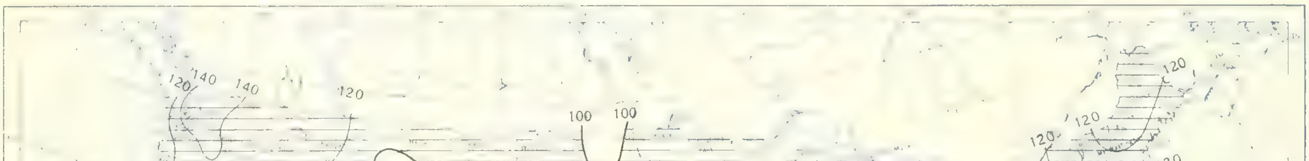


Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, July 1957.

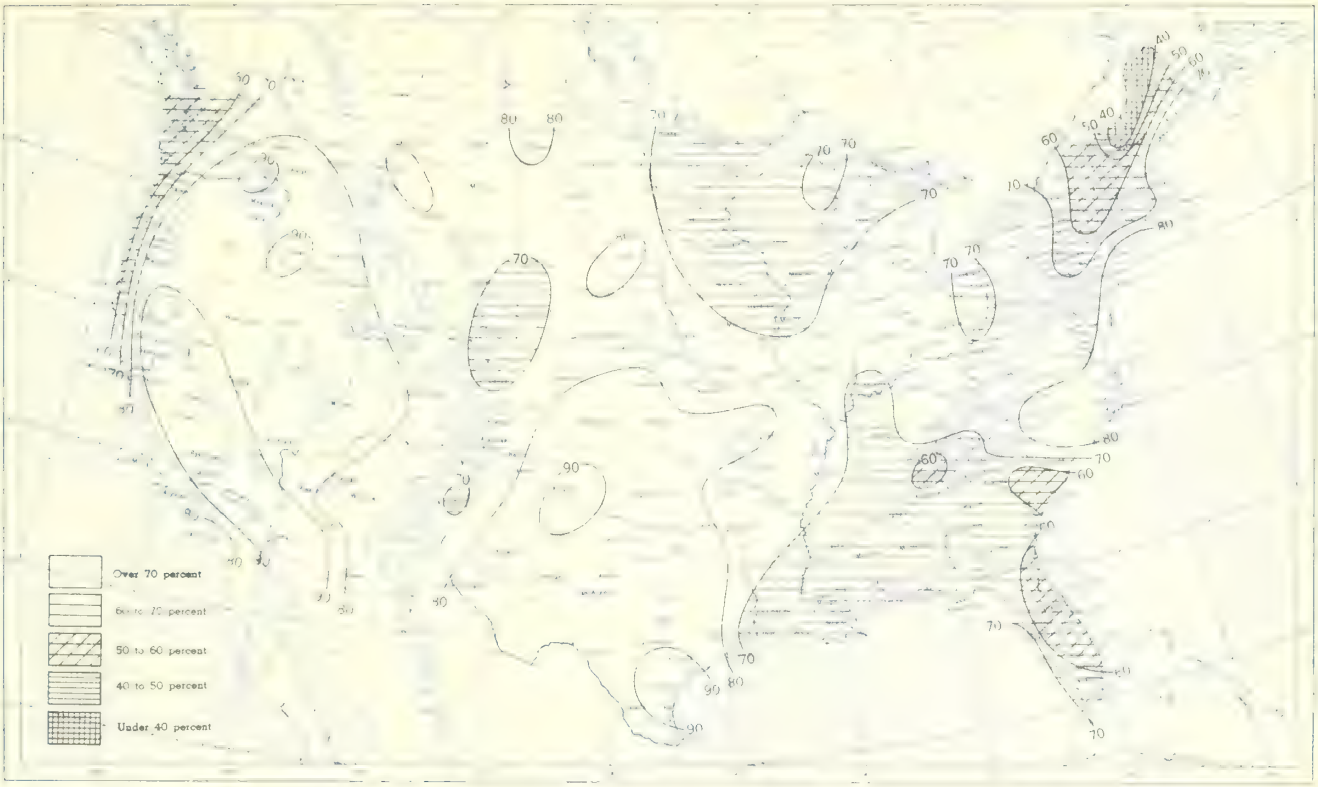


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, July 1957.



A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, July 1957.



B. Percentage of Normal Sunshine, July 1957.

A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, July 1957. Inset: Percentage of Mean Daily Solar Radiation, July 1957. (Mean based on period 1951-55.)

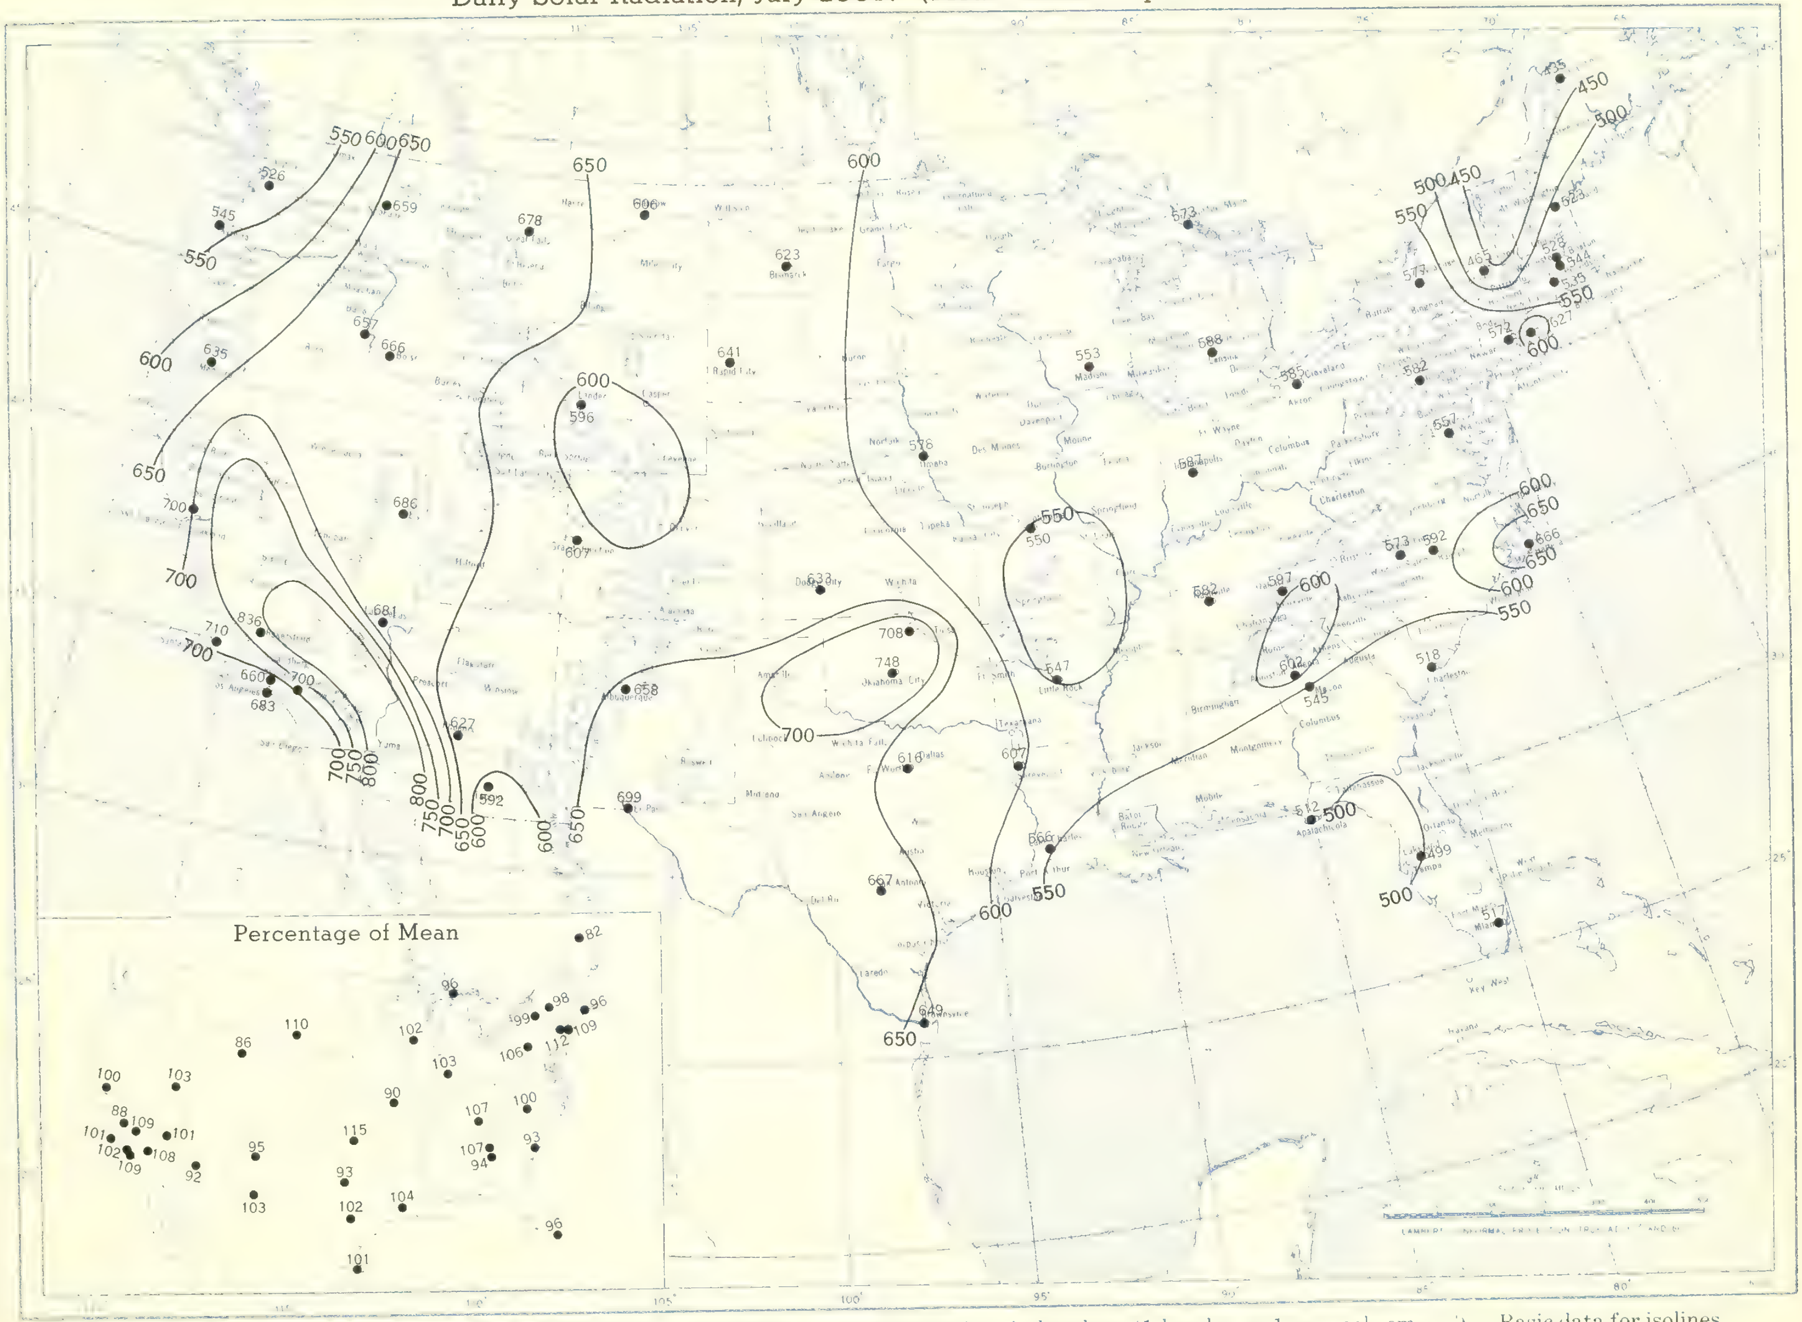


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

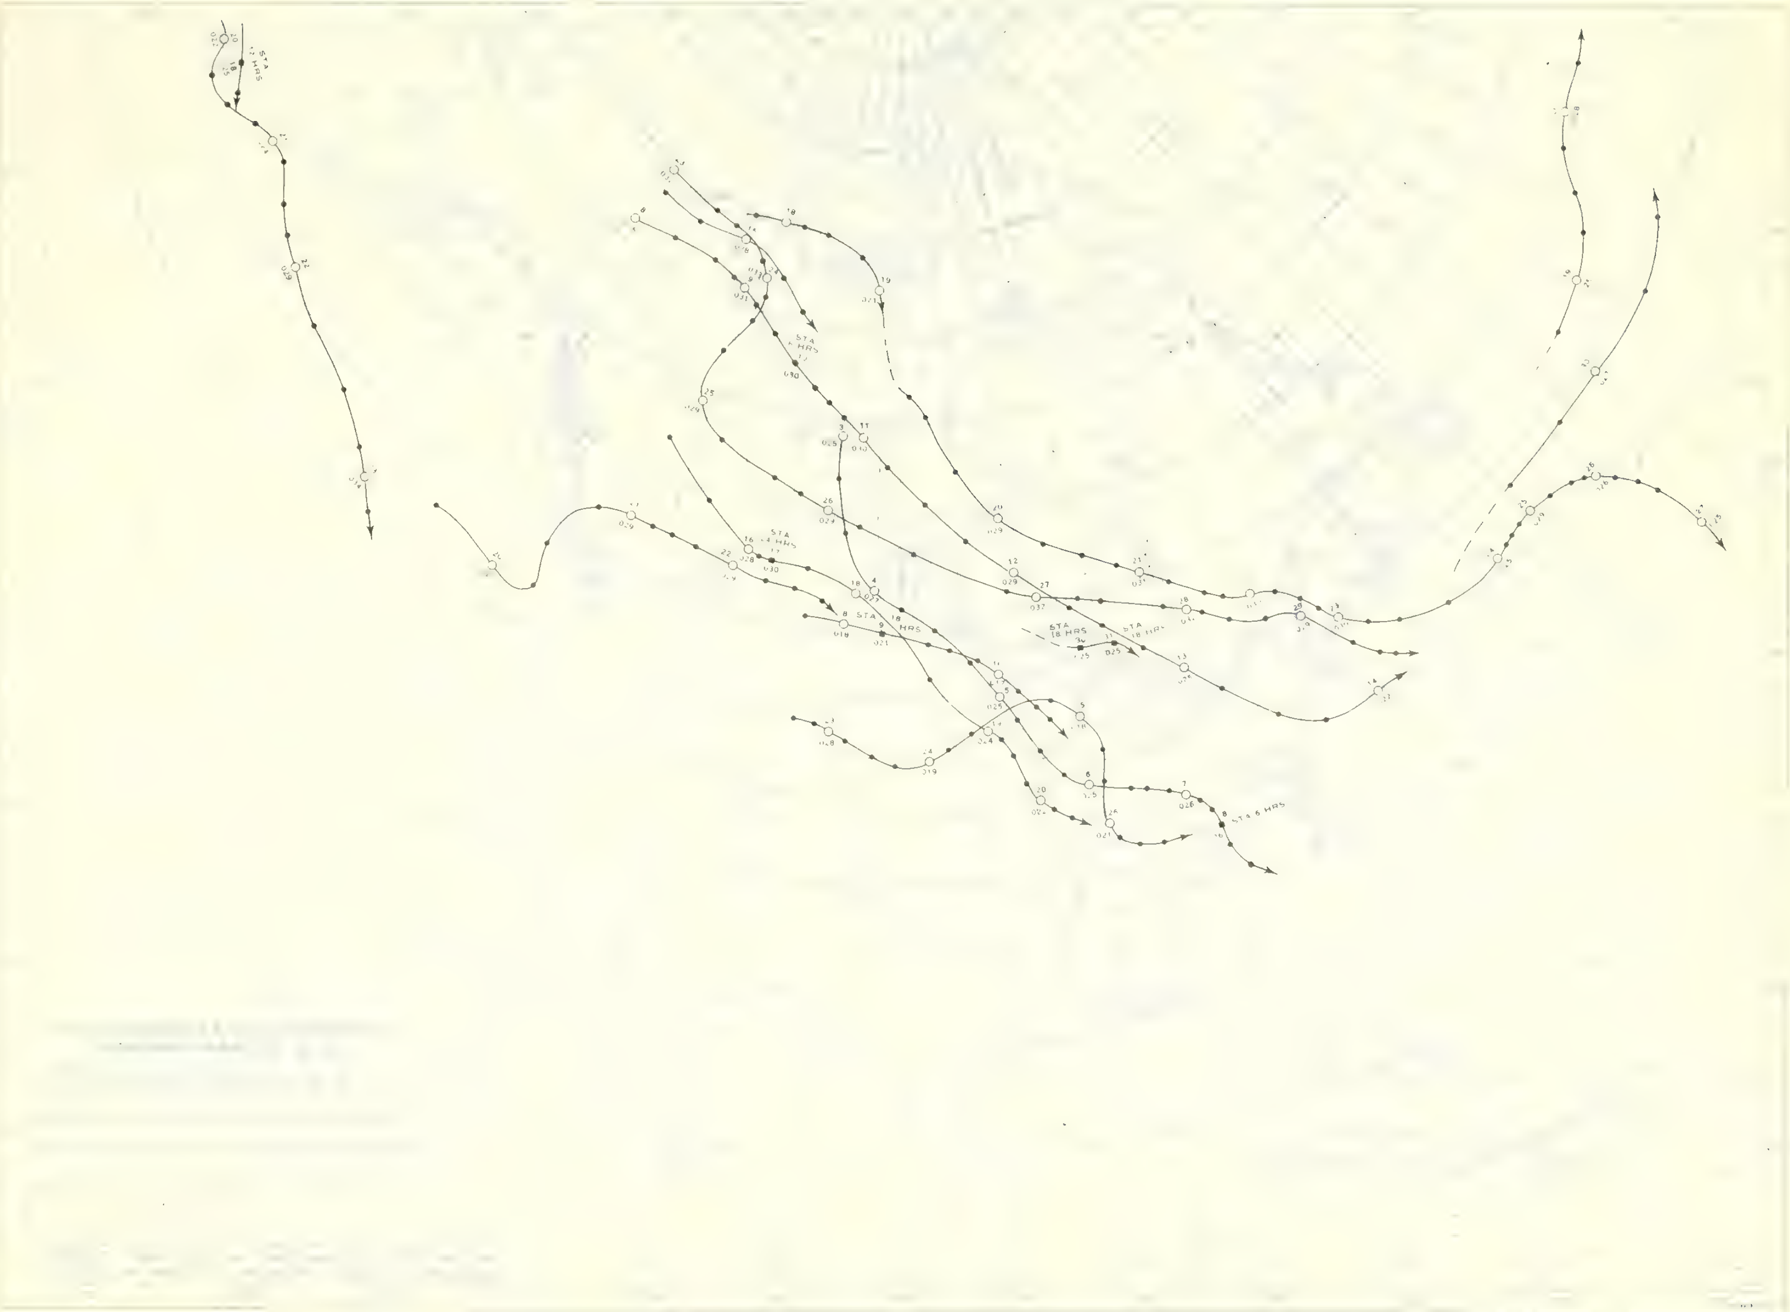
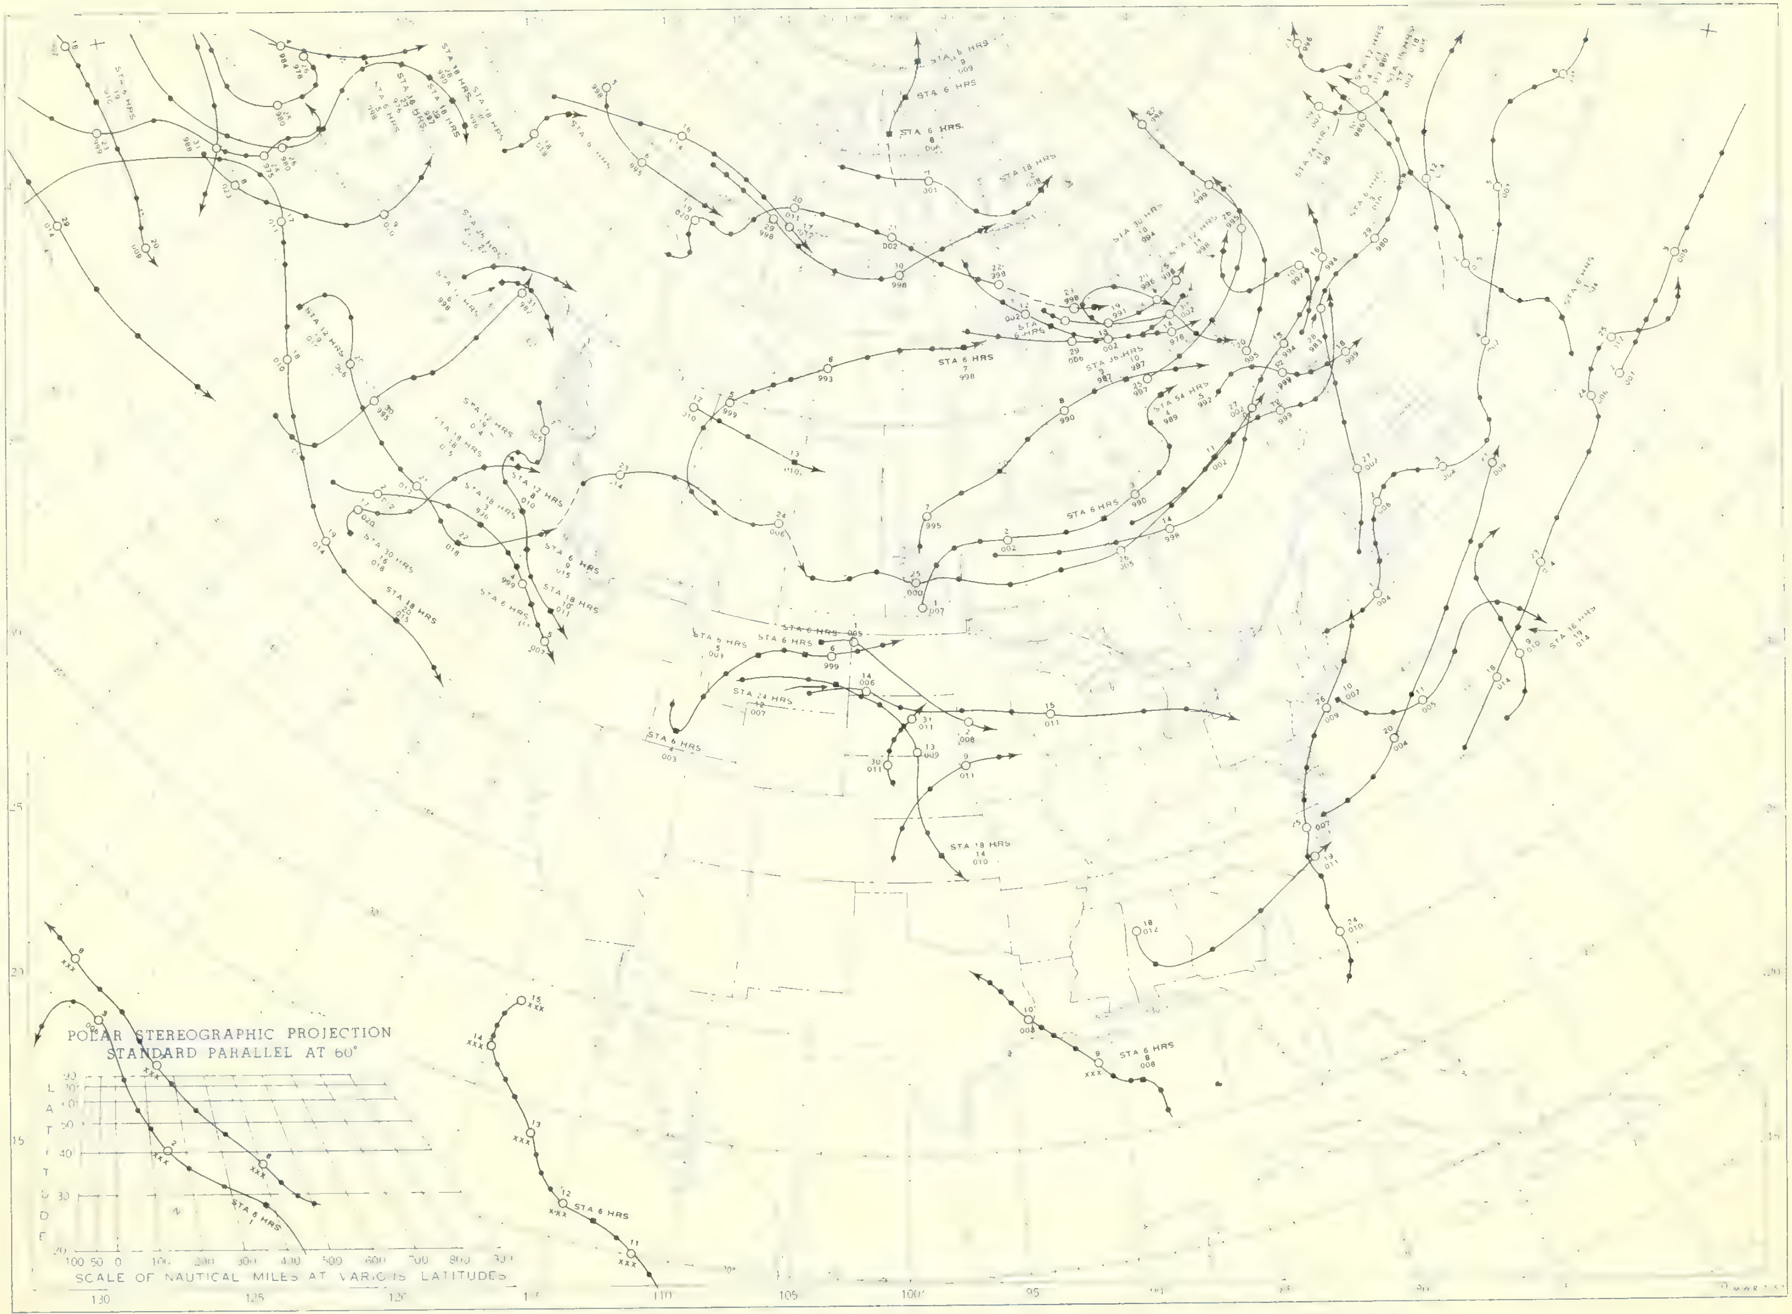
Chart IX. Tracks of Centers of Anticyclones at Sea Level, July 1957.



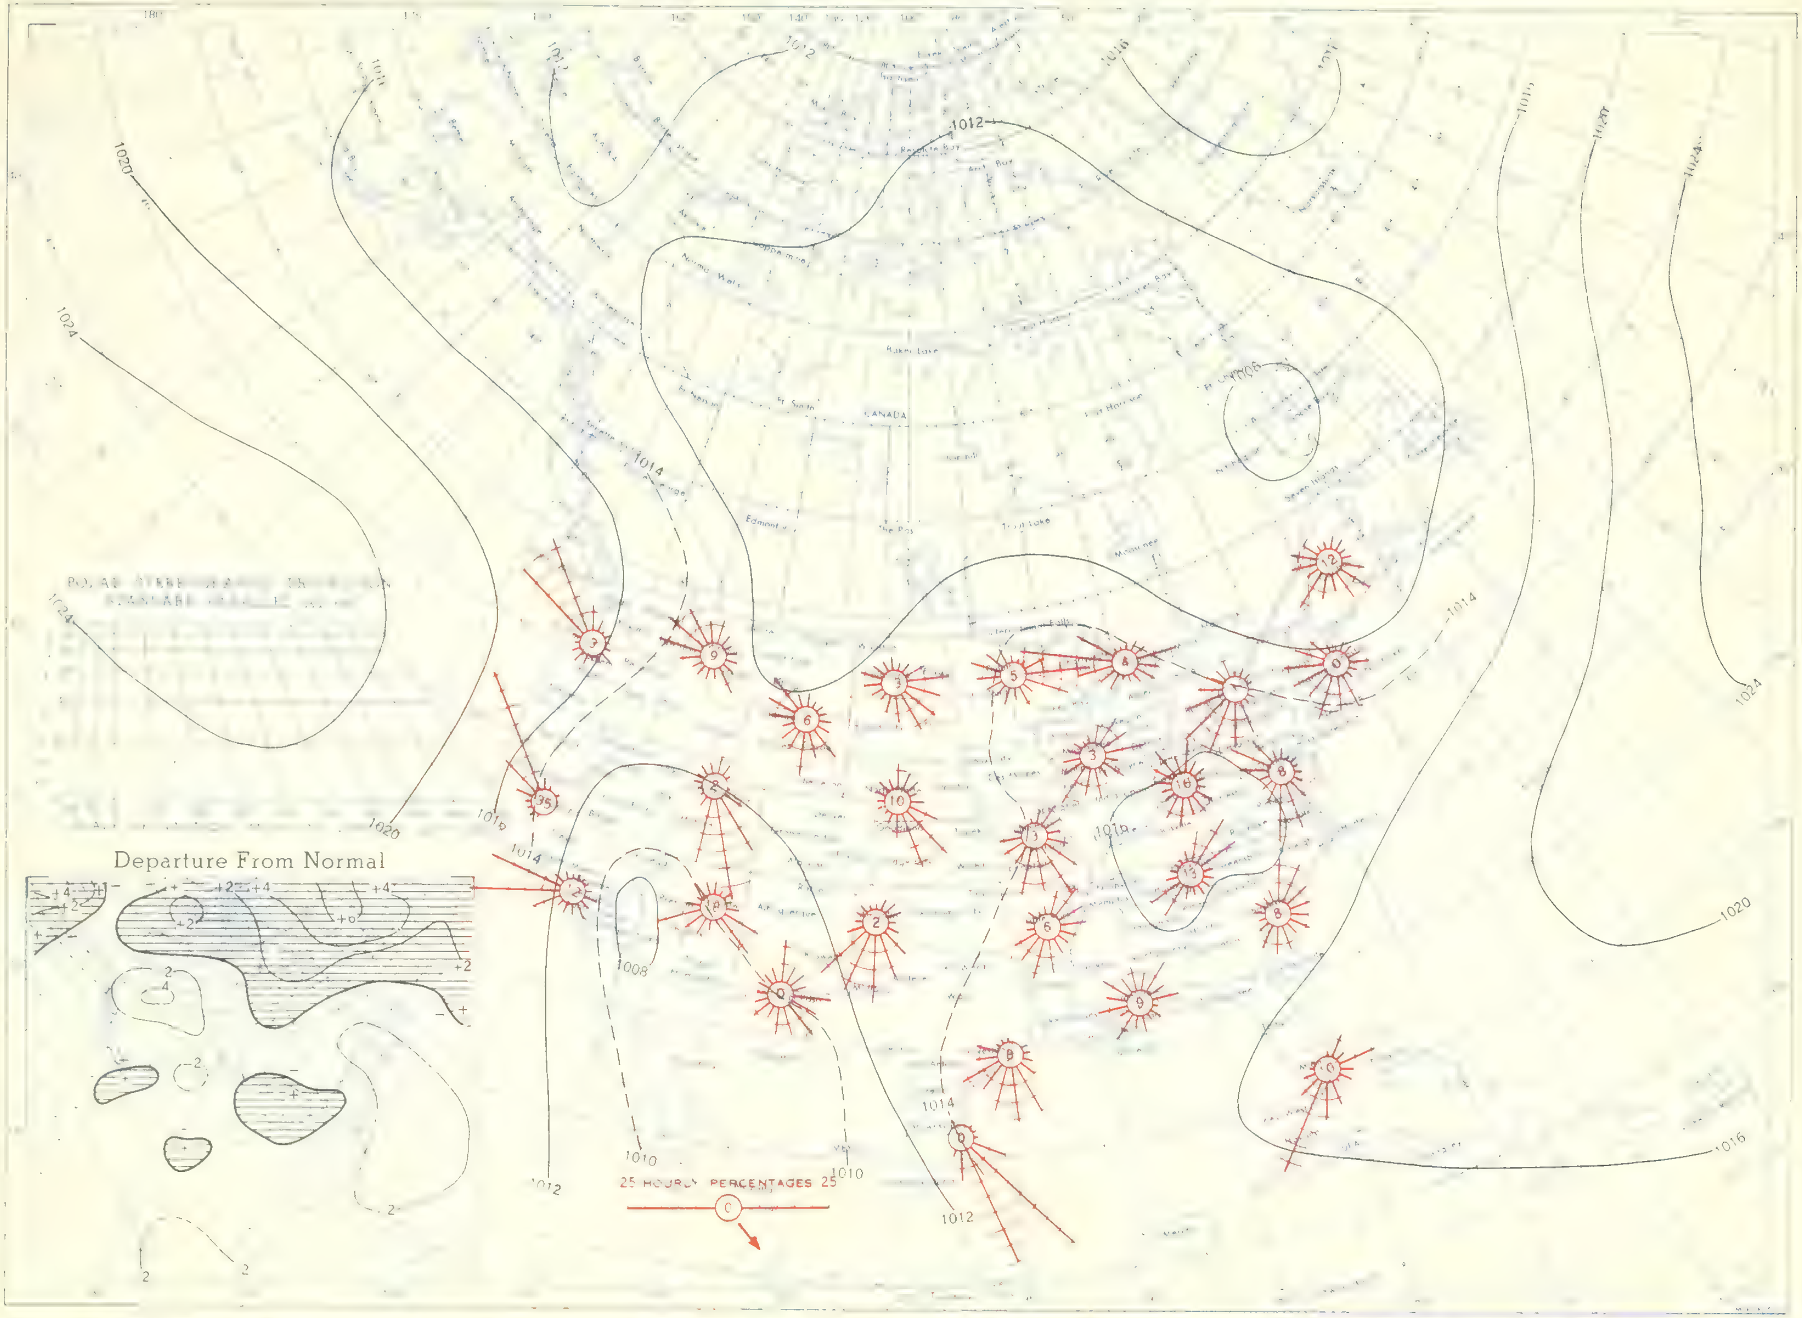
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, July 1957.



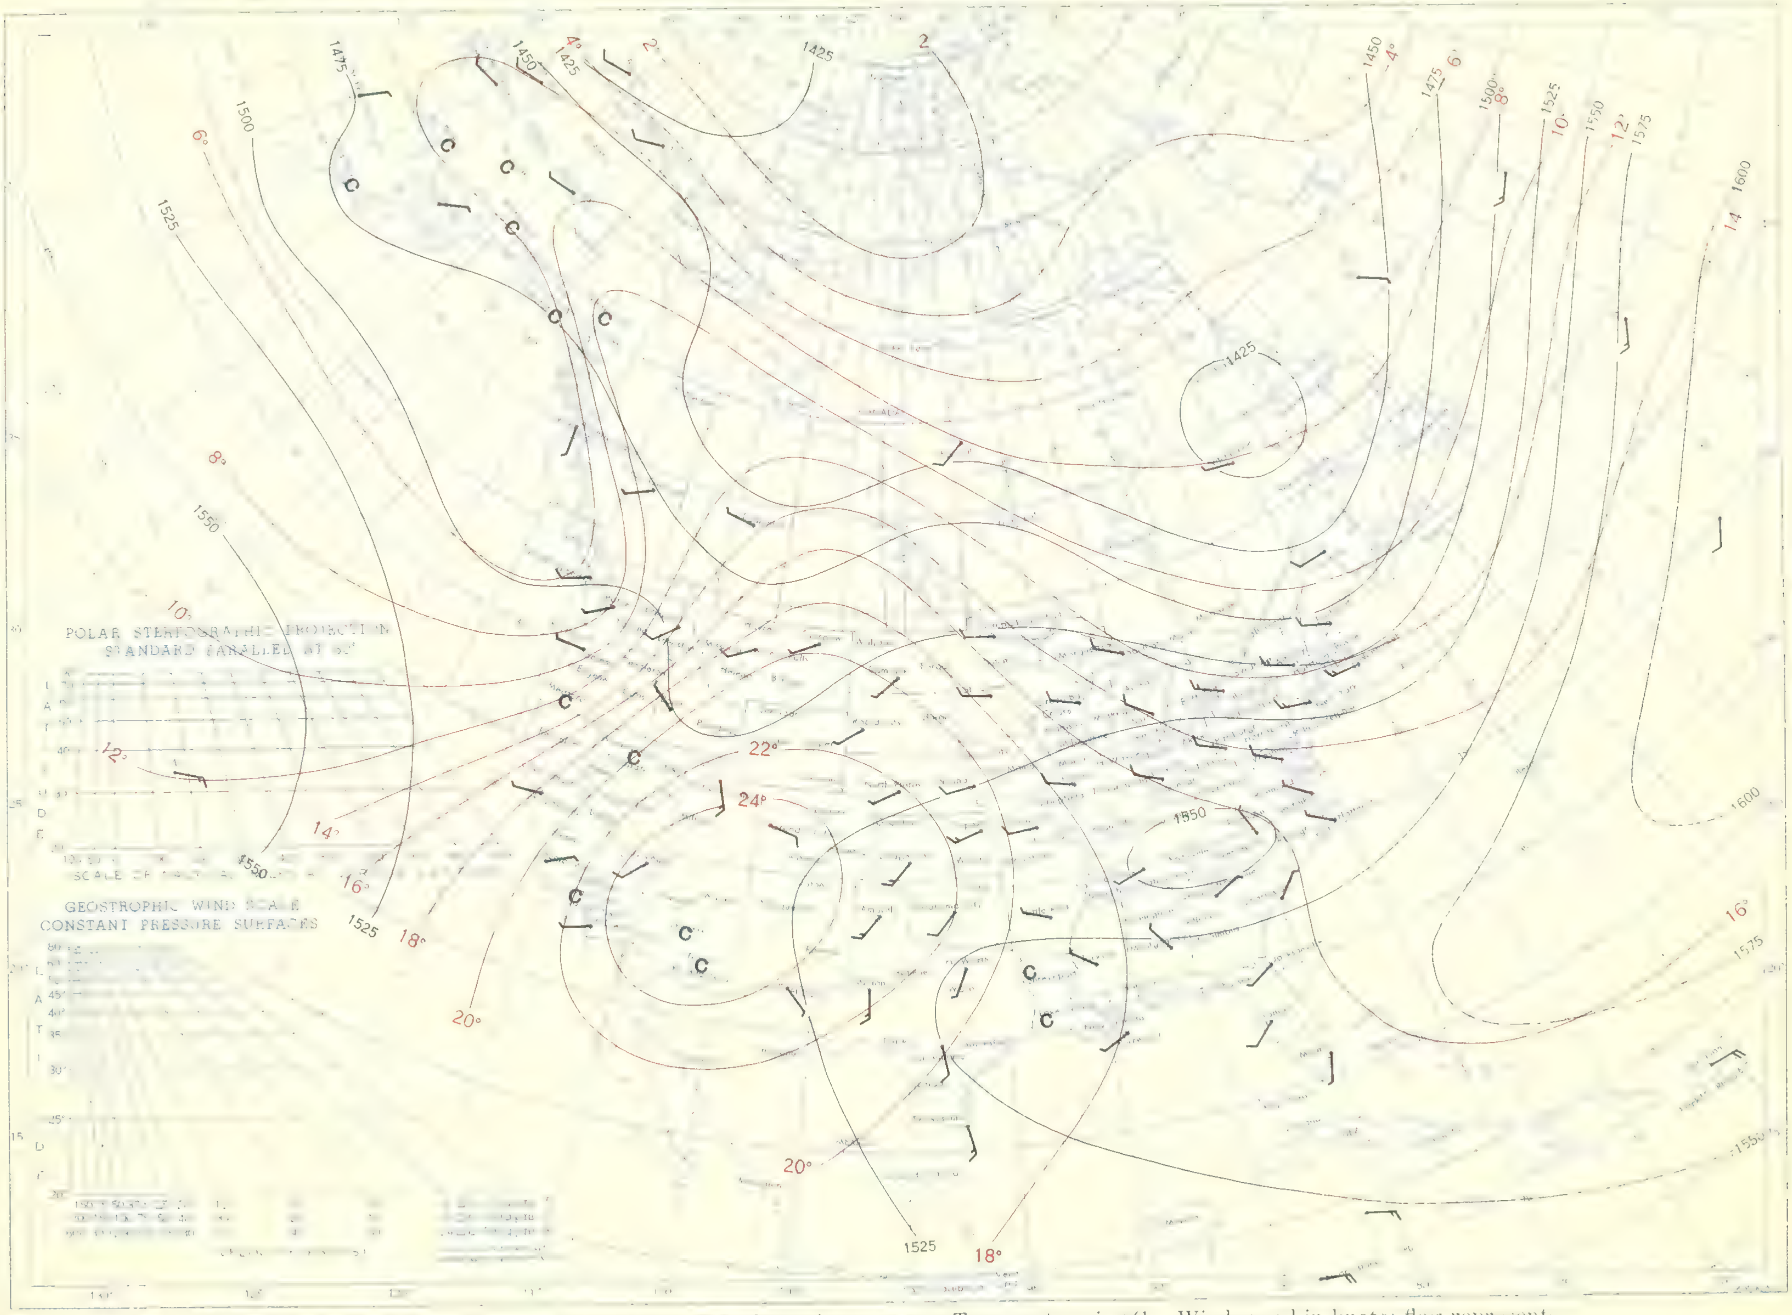
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, July 1957. Inset: Departure of Average Pressure (mb.) from Normal, July 1957.



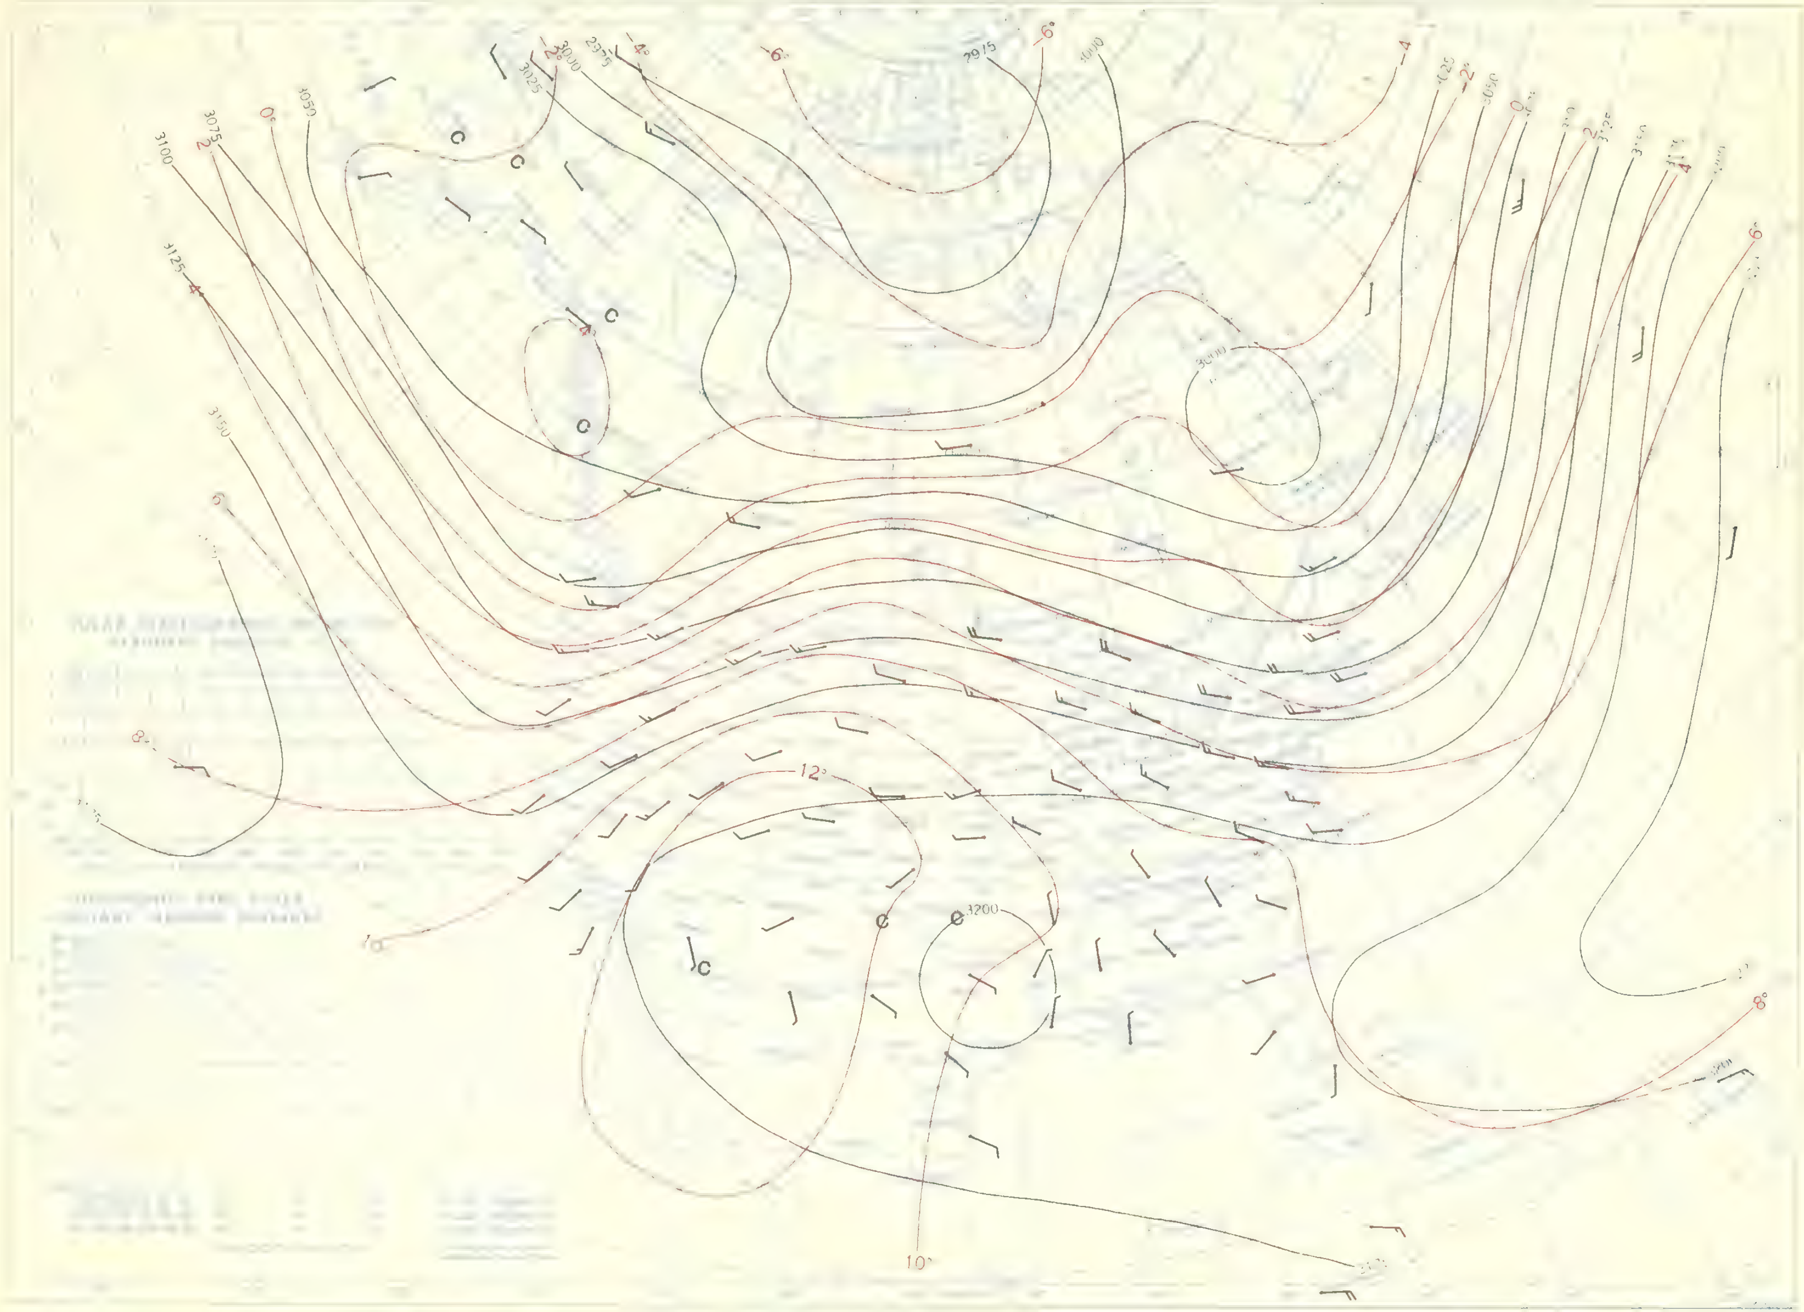
Average sea level pressures are obtained from the averages of the 7:00 a. m. and 7:00 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



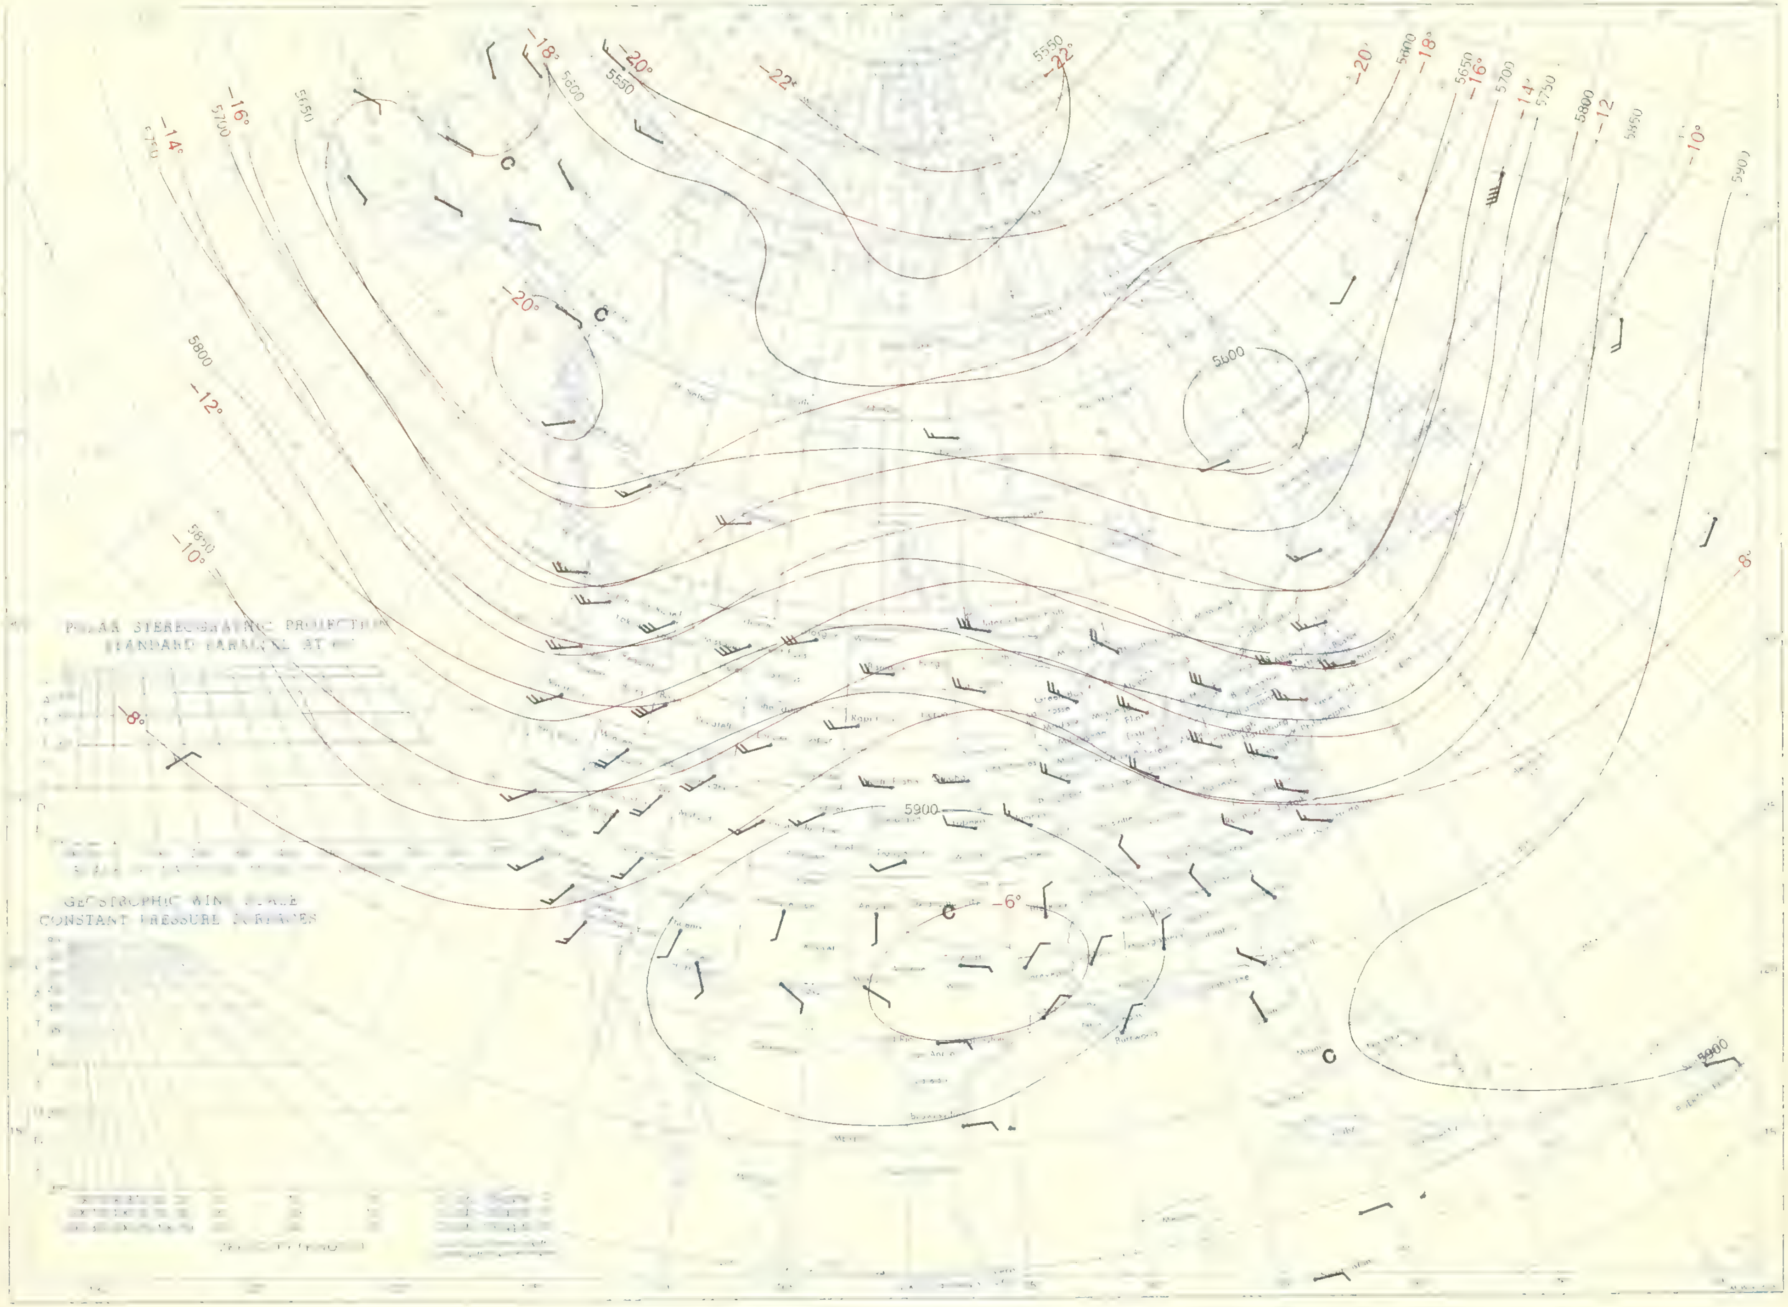
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



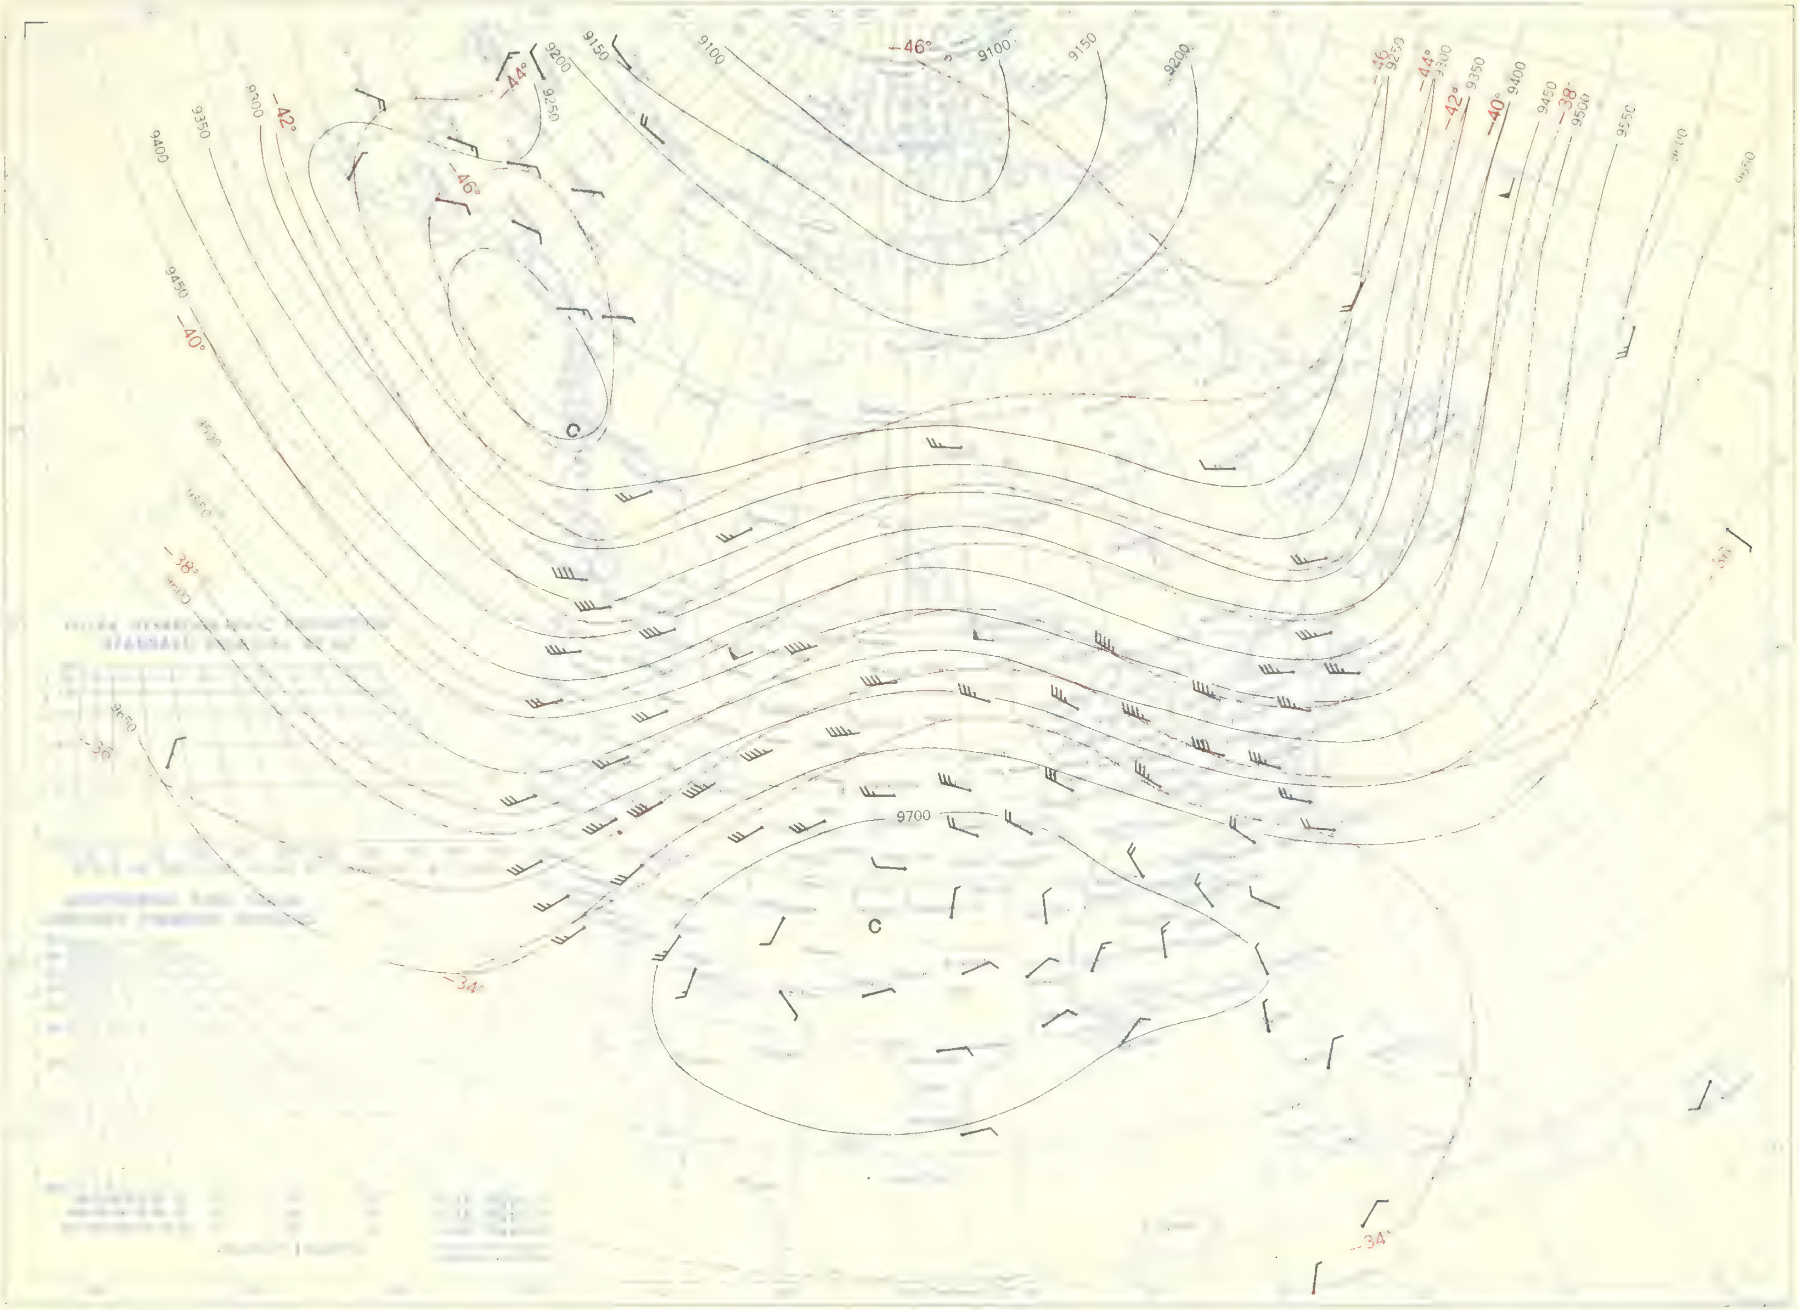
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



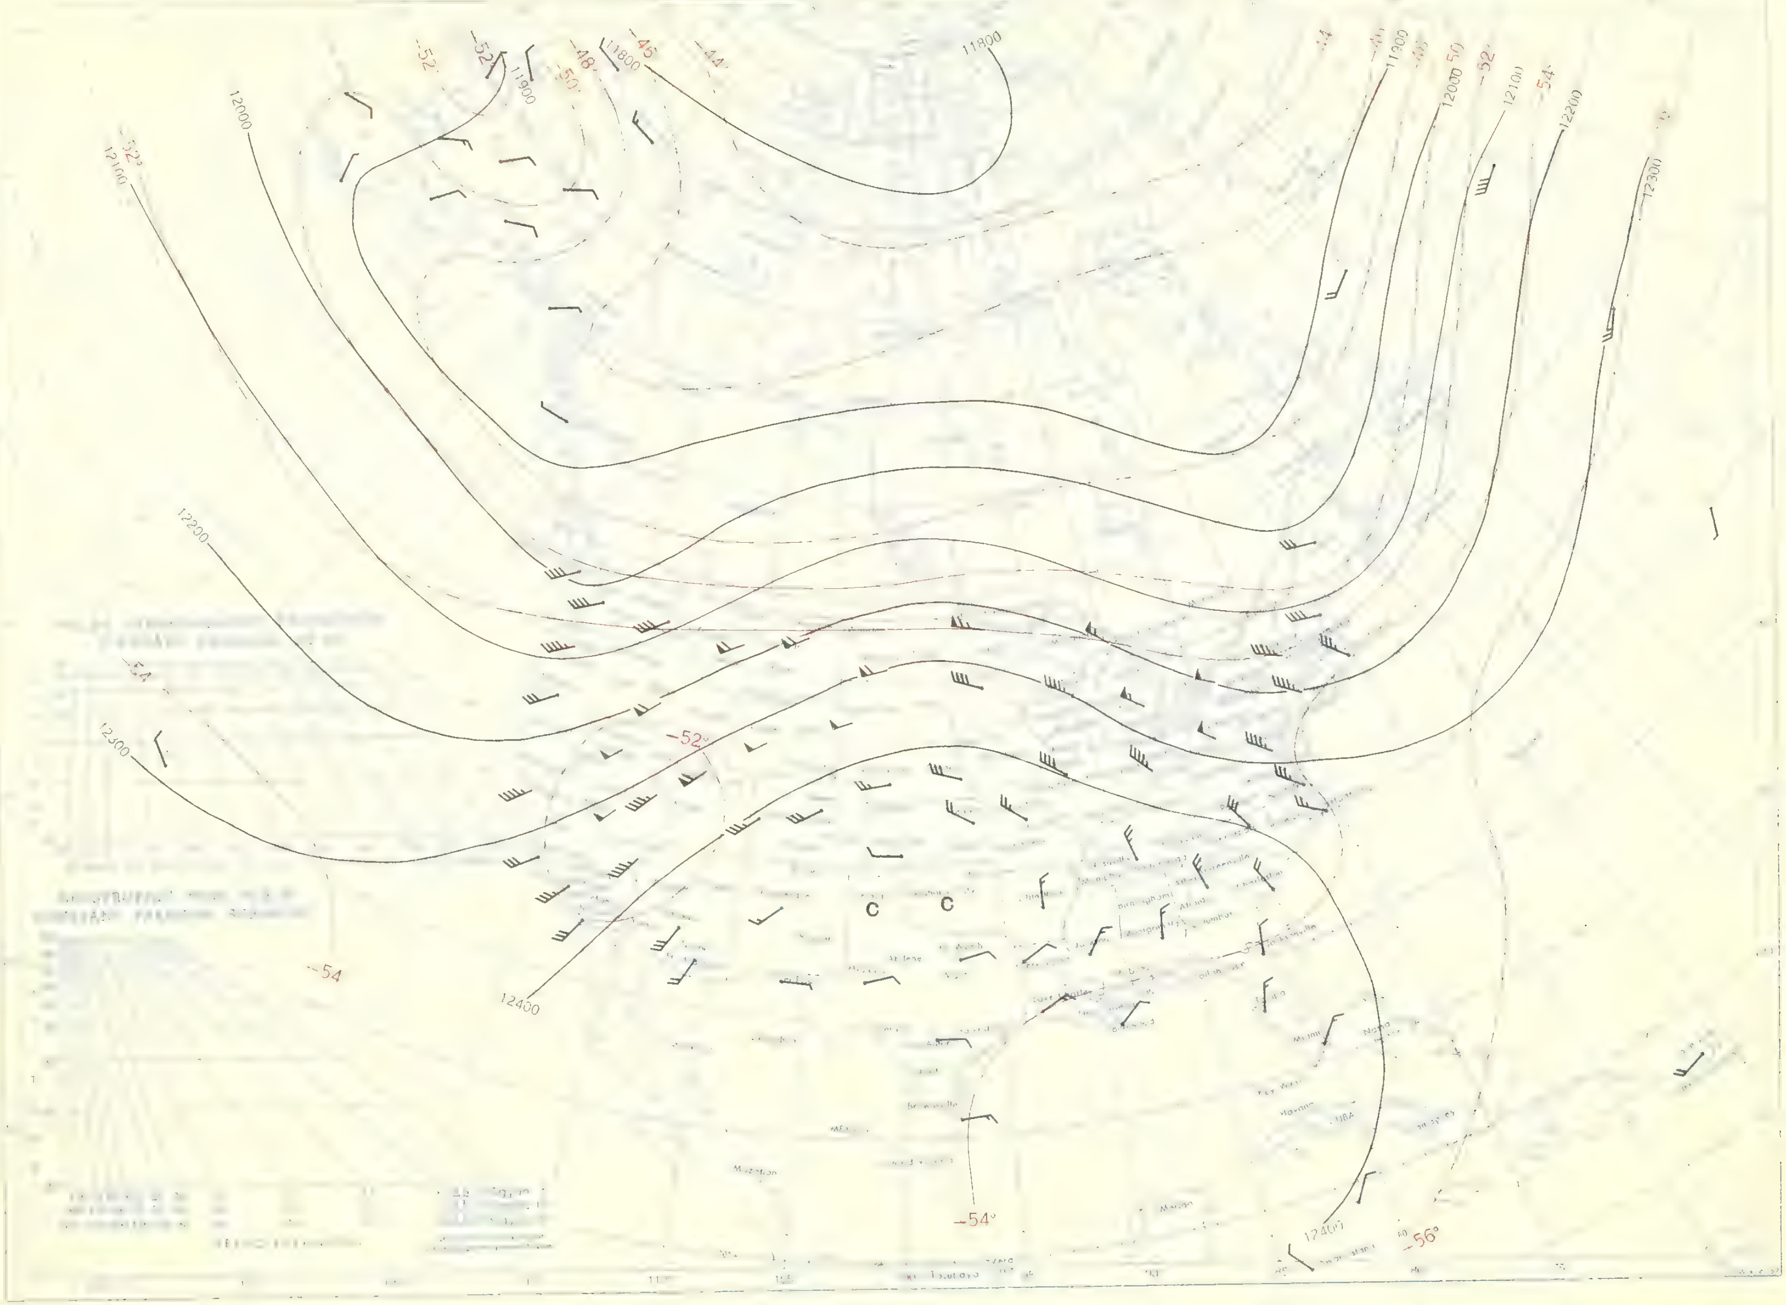
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



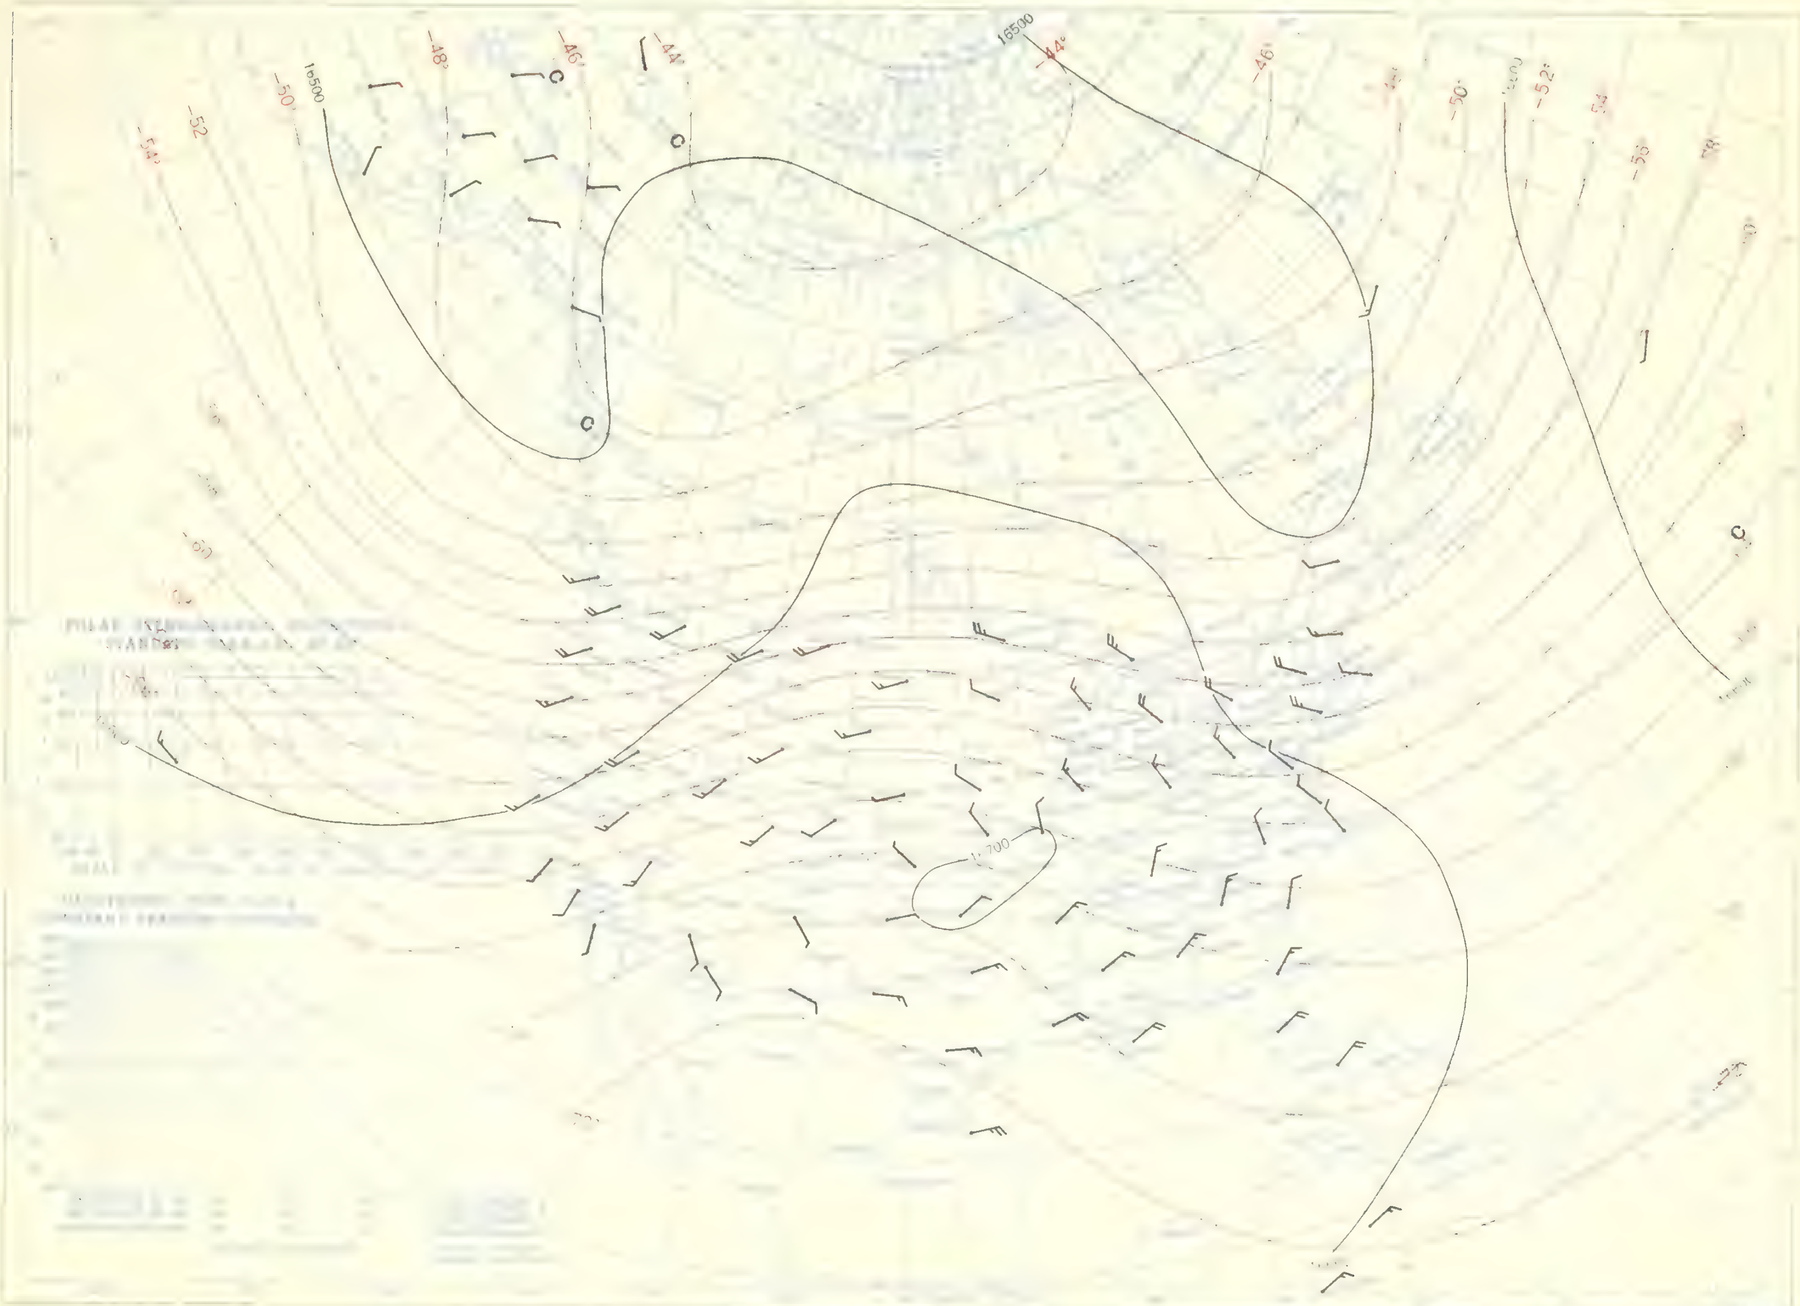
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, July 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

NATIONAL SUMMARY

Volume 8 No. 8

AUGUST 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

Temperatures for August, although rather unseasonably cool in the Northeast and Great Basin of the Far West, were favorable for crops and agricultural activities. Unusually dry weather created a high fire hazard in large areas of the Far West, caused some crop decline in Missouri and the lower Great Plains, parts of Alabama and Georgia, and extended the northeast coastal drought over inland areas including the upper Ohio Valley and lower Appalachian region where crop prospects also declined. Beneficial rains fell along the northeast coast late in the month, particularly on the 25th and 26th, but they were too late to greatly benefit corn and other crops near maturity. Unusually heavy rainfall in the lower Rocky Mountain region where greater than usual summer thunderstorm activity occurred was very beneficial. Severe local storms caused some heavy crop damage in the North Central Interior, but for the country as a whole damaging storms were relatively few and no hurricanes entered the mainland.

TEMPERATURE.--In the Pacific Northwest and central Great Basin, temperatures remained below normal most of the month, and a high of 74° at Las Vegas, Nev., on the 21st was the lowest maximum ever recorded there in August. In these areas unseasonably cool weather in both July and August and about normal temperatures in June resulted in an abnormally cool summer.

In the Northeast, temperatures generally remained below normal after the first few days of the month, with freezing occurring at a few stations on the 6th and 7th and again near the end of the month. Lowest temperatures occurred at most stations from the Mississippi Basin eastward on the 6th, 7th, and 8th when a cool air mass moved southward to the Gulf. A low of 26° was recorded in the Cranmoor cranberry bogs of Wisconsin, and a low of 55° at Augusta, Ga., on the 8th set a record for August there for an 83-year period.

During the remainder of the month temperature fluctuations were about normal. For the week ending the 19th, temperatures of 100° were recorded as far north in the Great Plains as South Dakota on 1 or 2 days, and 110° in Kansas on the 13th was the highest temperature observed in that State during the entire summer. The last week of the month was an unusually hot one in the Ohio and middle Mississippi Valleys although extremes were not unusual. Extreme temperatures for the month ranged from 18° at Boca, Calif., on the 30th to 122° at Cow Creek, Calif., on the 17th.

PRECIPITATION.--Rainfall for August generally was less than 50 percent of normal in the Appalachian region, upper Ohio Valley and Northeast, Missouri and the lower Great Plains, and much of the Far West, and about normal to locally much above elsewhere.

In northeastern coastal districts, the dry weather of June and July continued well beyond the middle of August, further reducing crop prospects. Good rains fell later in the month, particularly on the 25th and 26th, and, although they furnished much-needed moisture for pastures and fall seeding, they were too late to greatly benefit many crops such as corn and soybeans. Rainfall for the month totaled from 2 to 6 inches in much of Virginia, and from 2 to over 4 inches along the immediate coast from southern Maryland to southern New England. In the upper Ohio Valley and most of the Appalachian region, monthly totals generally were less than an inch and in many sections less than 1/2 inch. The month was the driest August on record at a number of stations including Charleston, W. Va., 0.66 inch, and Burlington, Vt., 0.72 inch. The dry weather started later in the summer in these areas than along the coast, and crops suffered less.

In large areas of Oklahoma and Texas, rainfall was less than 50 percent of normal for both July and August, and at the end of August soil moisture was nearly depleted in Oklahoma. August rainfall was less than an inch in parts of Kansas and Missouri, and crop prospects there also declined in some areas.

In the remainder of the country, precipitation generally was adequate for most crops, with monthly totals generally ranging from 2 to 4 inches except that along the Gulf coast from southeastern Louisiana to Florida totals ranged from 6 to over 10 inches.

DESTRUCTIVE STORMS.--Destructive storms were most numerous in northern areas east of the Continental Divide, particularly in north-central areas, and several damaging storms also occurred in the Far Southwest where more than the usual number of thunderstorms occurred.

One of the worst outbreak of storms occurred during the first few days of the month as a mass of cold air overspread virtually the entire area east of the Rockies. On the 1st, hail, rain, and wind in west-central Minnesota were responsible for damage estimated at well over a million dollars. Severe thunderstorms caused several hundred thousand dollars damage in northern and central Illinois on the 2d and 3d and a like amount in New York and New England on the 3d and 4th. Hail alone damaged property to the extent of more than a million dollars in Cheyenne, Wyo., on the 2d.

CONDENSED CLIMATOLOGICAL SUMMARY

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.

* Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.

+ And also on a later date or dates.

a Maximum hourly average † Peak gust ‡ Airport Data

# Number of days maximum 70° or above for Alaskan stations.

Ø Station pressures apply to elevation shown in Table 10b of the annual issue of this publication.

HEATING DEGREE DAYS

(Base 65°F.)

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NORTH CAROLINA Forsyth, Guilford, and Stokes Counties	1	1 p.m.						5	Hail	Several hundred acres of tobacco destroyed in fields by heavy fall of marble-sized hailstones.
VIRGINIA Moorefield area, Patrick County	1	1 p.m.	10	3520			1	4	Hail	Hail literally covered ground; size averaged 1/2 inch, with largest exceeding 1 inch. Tobacco plants were main target, stripping stalks. About 50 farmers affected. Storm moved eastward.
TEXAS Baytown (10 miles east-northeast of), Harris County	1	2 p.m.			0	0			Waterspout	Moved northeastward.
FLORIDA Pierson, Volusia County	1	4 p.m.			1				Electrical	
NORTH DAKOTA Towner, Cavalier, Ward, and Rolette Counties	1	5-7 p.m.			0	0	4	4	Funnel aloft, hail, wind, and rain	Funnel cloud observed at Bisbee. Considerable hail loss occurred and wind demolished some granaries and barns, uprooted trees, and blew away swaths of cut grain. Heavy rain also caused damage, flooding basements in Rolla. Storm moved southeastward.
MINNESOTA West-central portion	1	7 p.m.			0	0	5	6	Hail, rain, and funnels aloft	Severe damage reported in 13 counties. Heaviest in Lac qui Parle County where 4 funnel clouds sighted. Crop damage light to complete loss, with hail as large as 1-1/2 inches in diameter. Many barns downed, also airport hangar at Montevideo. Trees uprooted and utilities interrupted. Storm moved southeastward.
MONTANA Worden, Yellowstone County	1	7 p.m.	10	*3			3	5	Hail	Average diameter of hailstones 3/4 inch, largest stones 2 inches in diameter. Storm moved eastward.
SOUTH DAKOTA Buffalo to Hutchinson Counties	1	7-10 p.m.					4	4	Electrical, wind, and hail	Most hail losses from 5 miles south of Gannvalley to Parkston. Lightning killed livestock on 5 farms. Wind destroyed barn and buildings near Gannvalley. Storm moved southeastward.
	1									Minor storms also reported at Lincoln, Ill.; and near Wilmot, S. Dak.
SOUTH DAKOTA Harding and Perkins Counties	2	1-2 a.m.	100	*4-6					Hail	Storm started near Ralph and moved just north of South Grand River. Crops and grass pounded into ground, giving prairie appearance of having been plowed. Sheep and lambs bruised, crippled, and killed. Hide stripped from backs of cattle and horses. Rabbits and birds strewed about on fields. In Bison, hundreds of windows broken. Sides and roofs of buildings battered. Hens'-egg-sized stones dented cars, broke windshields, and wrecked exposed radiators. Storm moved east-southeastward.
NEBRASKA Tekamah (8 miles northeast of), Burt County	2	6 a.m.	Short	Narrow	0	0	3	1	Tornado (suspected)	Storm moved northeastward.
NEBRASKA Lyons (north of), Burt County	2	A.m.					3	3	Tornado (suspected), hail, and wind	Property damage by wind, crop by hail.
ILLINOIS Waukegan and Chicago, Cook and Lake Counties	2	2:30 p.m.					4		Wind	Local thundersqualls damaged trees and overhead wires in southern portion of Waukegan and parts of Chicago. Wind gusts to 65 m.p.h., on Chicago lake front. Many sailboats upset.
KANSAS Cheyenne County	2	3-4:30 p.m.							Wind and hail	Farmstead northeast of St. Francis suffered minor damages from wind, 2 buildings moved off their foundations, and numerous articles turned over. Neighboring areas unaffected by local wind. Numerous spots of hail caused minor damage over central and eastern parts of County. Storm moved westward.
NEBRASKA Stromsburg (south of), Polk County	2	4 p.m.			0	0	2	3	Funnel aloft, hail, and wind	Tornado funnel observed, but did not touch ground.
INDIANA Edinburg (south of), Bartholomew County	2	4:50 p.m.				5	4	1	Wind and electrical	5 homes damaged and skating rink tent and barn near Camp Atterbury blown down by severe winds of thunderstorm. $12,000 property damage by wind, $2,000 by lightning.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEBRASKA York (1 mile west of), York County	2	5:30 p.m.					4	1	Electrical	Dairy barn struck and burned, with feed and equipment. Cows saved.
NEBRASKA Chapman (east of), Merrick County	2	Late afternoon	20	*15			3	4	Wind	Widespread light damage. Corn blown down Storm moved eastward.
WYOMING Cheyenne, Laramie County	2	8 p.m.	20	*5			6	3	Hail	Most to automobiles and homes, although there was also sizeable loss from broken neon signs and large windows in business district. Reliable reports received of hailstones to at least 3 inches in diameter and these reports were borne out by examples of hail making holes in car roofs and windshields as well as house roofs. Very little crop damage occurred with this storm since it was over almost no crop land. Storm moved southeastward.
	2									Minor storms also reported near Blue Ridge and at Rensselaer, Ind.; near Geneva, Lorenzo, Loup City, Osceola, O'Neill, and Stockville, and at Wakefield and in York County, Nebr.; and at Gage, Okla.
COLORADO Loveland, Larimer County	2-3	Before midnight							Hail, Rain, and wind	Flash thunderstorm, lasting about 20 minutes, did much damage to crops, especially sugar beets, cherries, and grain. 2 to 4 inches of hail fell. Storm accompanied by winds up to 75 m.p.h. Many trees blown down, hitting homes and cars. Power out and many roofs and windows damaged. Storm moved southwestward
ILLINOIS Extreme northern portion	3	10:30 a.m.				1	6		Wind, rain, and electrical	Southward moving cold front caused heavy showers and lightning and wind damage in narrow band extending from Morrison eastward through Rochelle, and Aurora to Chicago. Heavy damage to county fair tents at Aurora; 3.50 inches of rain in 15 minutes at Morrison; basements and underpasses flooded at Chicago.
KANSAS Fort Scott area, Bourbon County	3	12:25 p.m.							Electrical	Lightning struck tree and house in southeastern Ft. Scott. Limb fell on back porch and wiring and appliances in house damaged.
INDIANA Elkhart and St. Joseph Counties	3	1-5 p.m.					3	1	Wind, electrical, and rain	Lightning damaged home in Roseland and basement of home near South Bend. Wind blew over concrete-block wall in Elkhart, also numerous trees and antennas. At South Bend Airport, wind reached 70 m.p.h., in gusts at 2:25 p.m. Rainfall 1.81 inches in 150 minutes; 1.55 inches fell in 30 minutes. $2,500 property damage by wind, $500 by lightning.
INDIANA Cedar Lake, Lake County	3	1:30 p.m.			2	2	1	1	Electrical	2 golfers killed and 2 injured as they sought shelter under tree during thunderstorm.
MICHIGAN Lower south-central portion	3	3-5 p.m.					4	4	Wind, electrical, and hail	High winds caused scattered damage lightning-set fires destroyed 2 barns. Hail damaged crops in a few areas. Affected area extended from Kalamazoo and St. Joseph Counties eastward through Jackson and Hillsdale Counties.
FLORIDA Miami Springs, Dade County	3	Afternoon							Wind and electrical	Winds estimated at 70 m.p.h. blew down trees, toppled TV antennas, and caused other minor damages.
INDIANA Whiting, Lake County	3	4 p.m.					5	1	Wind	High winds blew down at least 50 trees, damaged 4 garages and 3 automobiles. Residents without electricity or water for 3 hours after gusts hit and had to boil water because of danger of pollution.
MISSOURI Pleasant Hill, Cass County	3	4:30-5:30 p.m.							Rain and wind	4.40 inches of rain fell in less than 1 hour. Local flooding. Trees and barns blown down on 1 farm.
COLORADO Eastern portion	3	Afternoon-evening							Hail and rain	Series of thunderstorms from Weld County to Pueblo County, caused heavy damage to crops, roads, and bridges. Area east of Colorado Springs received from 3 to 4 inches of rain, causing floods which washed away bridges and damaged roads. In Weld County, hail battered crops. At Brighton and vicinity and west of Colorado Springs, hailstones 3/4 to 1 inch fell. $100,000 crop damage in Weld County.

See footnotes at end of table

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ILLINOIS South-central portion	3	Afternoon -evening				4	5		Wind, rain, and electrical	During afternoon and early evening, numerous thunderstorms caused scattered wind damage, heavy local showers, and lightning damage at scattered locations from Danville-Lincoln-LaHarpe line southward to Flora and Marissa. County fair grounds damaged at Jacksonville. Storms especially active in St. Clair County.
INDIANA Columbus, Bartholomew County	3	7 p.m.			0	0			Funnel aloft	Funnel cloud reported east of Columbus and moving eastward.
VERMONT Southern portion, and MASSACHUSETTS, Northwestern portion	3	9 p.m. - midnight					4	3	Wind	In area from Rutland, Vt., to Greenfield, Mass., most severe in Windham County, Vt., winds toppled trees, blocking roads and breaking power- and phone lines. Falling trees damaged house at West Dummerston, flattened barn at Stratton, and caused 2 automobile crashes at Rutland, Vt. Twisting and rotary motion observed in trees in Brattleboro, Vt., vicinity. No rain fell. Several woodsfires set by fallen wires were fanned by winds.
MISSOURI St. Louis	3	Evening			1				Electrical and rain	Golfer killed when hit by lightning.
MISSOURI Cape Girardeau, Cape Girardeau County	3	Evening				2			Wind and rain	Large tent badly damaged and several large trees blown over.
MISSOURI Dexter, Stoddard County	3	Night					5		Electrical and rain	Lightning set grain elevator on fire.
PENNSYLVANIA Northwestern counties	3	Night				1	4	1	Electrical and wind	Several homes and barns partially destroyed by fire, resulting from lightning strikes and trees downed by accompanying high winds. Storm moved southeastward.
ALABAMA Abernant, Tuscaloosa County	3					3	3	1	Electrical	Lightning hit room in which 5 children were playing. 2 children burned considerably and hospitalized, with 1 knocked unconscious. Another home in area hit, and woman suffered facial burns.
ALABAMA Mobile, Mobile County	3					1	1	1	Electrical	At Mobile Yacht Club, man knocked from sailboat by lightning. Hair singed from arms and chest, but otherwise unhurt.
MISSOURI Hannibal area, Marion County	3								Rain	3.00 inches of rain in 2 hours along Bear Creek caused flooding in and near Hannibal. Many homes and businesses damaged.
TEXAS Lipscomb County	3				0	0			Funnel aloft	Observed moving north-northeastward.
	3									Minor storms also reported at Charleston, Ark.; near Marion, Kans.; at Centralia, Lanes Prairie, Mapaville, and St. James, Mo.; near Springview, Nebr.; and at Buena Vista, Tex.
NEW YORK Central and eastern portions	3-4	Afternoon 3d - morning 4th			2				Wind, rain, electrical, and hail	Series of violent thunderstorms, with heavy rains swept through area as cold front and squall lines moved eastward. Up to 7 inches of rain near Syracuse caused flash flooding which resulted in 2 deaths (1 man swept over dam and boy swept into overflowing creek). 2 lightning strikes on power stations disrupted electric power over 14-county area from western Catskills to eastern southern tier of counties northward to Utica area. Damage estimated at $300,000 in Oneida and Madison Counties alone, with equal damage in several other counties. Lightning strike on lumberyard at Rotterdam (near Schenectady) caused fire with $1/2 million estimated damage. Many trees downed and unoccupied house blown apart. Some areas of hail reported. In Richford-Center Lisle area, considerable wind damage - Binghamton WBAS investigated possibility of tornadic activity which was not confirmed. Usual crop damage from winds, but no estimate of money value available.
MICHIGAN South Haven (7 miles north of), Allegan County	4	9:25 a.m.			0	0			Waterspout	Waterspout in Lake Michigan dissipated upon reaching land.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

AUGUST 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MICHIGAN Saginaw (15 miles northeast of), Bay County	4	10:50 a.m.			0	0			Waterspout	Waterspout in Saginaw Bay dissipated upon reaching land.
RHODE ISLAND Newport County	4	Late a.m. - p.m.					3	1	Electrical and rain	Moderately heavy rain and lightning damage centered in southeastern part of State. Pump houses at 2 Newport reservoirs struck by lightning in late morning. Switch boards and large pump motor badly damaged. 2 houses struck in late afternoon in Middletown area, with minor structural damage resulting. Rainfall up to 1.50 inches caused some street washouts and miring of 2 automobiles, but was very beneficial to parched farms in vicinity.
NORTH CAROLINA Cabarrus, Rowan, and Iredell Counties	4	2 p.m.					4		Wind and electrical	Trees blown down and several buildings destroyed or damaged by wind; power and telephone facilities knocked out by lightning. Most damage in vicinity of Kannapolis and Statesville.
SOUTH CAROLINA Central and eastern portions	4	Afternoon			1		5	1	Wind and electrical	Scattered severe local thunderstorm accompanied passage of squall line across central and east. Scattered damage included: Richland Co., Columbia, -$55,000 lightning damage; Lexington County, Lexington - 1 fatality from lightning; Lancaster County, Lancaster, - minor wind damage; York County, Rock Hill, - minor lightning damage. Storm moved southeastward.
FLORIDA Miami, Dade County	4	3-4 p.m.				1			Wind, electrical, and hail	Strong, gusty winds caused considerable minor damage in Miami area; lightning injured 1 person. Strong winds along waterfront damaged numerous small boats. Some hail reported in area.
INDIANA Evansville (southwest of), Vanderburgh County	4	3:25 p.m.			0	0			Funnel aloft	Funnel cloud not reaching ground reported.
ARIZONA Sentinel, Maricopa County	4	6 p.m.	12		0	0	3	1	Tornado (suspected)	Tornado moving westward passed 1/2 mile south of Sentinel, damaging service station.
GEORGIA Alma, Bacon County	4	9 p.m.			0	0	3	1	Wind, rain, electrical, and funnel aloft (suspected)	Trees uprooted and utility lines downed by winds with gusts estimated to 75 m.p.h. Lightning struck several buildings. Possible that tornado passed overhead as weird roaring sound heard by many citizens at height of storm.
MASSACHUSETTS Cape Cod area	4	P.m.					4	1	Electrical, rain, and wind	Lightning damaged several homes and knocked out powerlines in area and set afire store at Falmouth. Some trees felled by wind. Some phone cables damaged by rain.
NEW MEXICO Las Vegas and vicinity, San Miguel County	4				2				Rain	Heavy rains in nearby mountains washed out 3 small dams, damaged highway bridges, and flooded some low lands. 2 persons drowned while crossing flooded arroyo.
TEXAS Olton (near), Hale County	4				0	0			Funnel aloft	
	4									Minor storms also reported at Fairhope, and Mobile, Ala.; at Morrilton, Ark.; at Hugo, Colo.; at Dublin, Ind.; at Bowling Green, Mo.; at Okmulgee and Wagoner, Okla.; and near Ralls and Tulia, Tex.
ARIZONA Winslow (30 miles west-southwest of), Coconino County	5	11:05 a.m.			0	0			Funnel aloft	Pilot reported funnel cloud aloft.
MONTANA Dillon, Beaverhead County	5	Early morning						3	Wind and electrical	Wind speed reported at 75 m.p.h. Power- and telephone lines damaged, tree limbs broken, and TV antennas blown over.
ALABAMA Ashford, Houston County	5	1 p.m.			1		2	1	Electrical and rain	Man fishing in pond killed when he took refuge from rain under oak tree. Large hog also killed under same tree.
UTAH Emery, Duchesne, and Grand Counties	5	Afternoon					4	3	Rain and electrical	Heavy rain and resulting run-off caused damage to homes, roads, farms, and crops at Orangeville and in Hanna-Tabiona area; TV cable knocked out by lightning. Torrential rains in Moab area caused destruction of water lines crossing Mill Creek and other minor damage.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

AUGUST 1957

Place	Date	Time	Length of path, miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MONTANA Warmsprings, Deer Lodge County	5	3 p.m.			1		1	1	Electrical	Lightning strike killed patient on grounds of State Hospital.
COLORADO El Paso and Crowley Counties	5	4-7:30 p.m.			0	0			Tornado, wind, and electrical	Near Palmer Lake, "twister" took part of roof off lumber company building and blew stacked lumber about. In Colorado Springs 2 homes struck by lightning, but no serious damage reported. At Ordway, valuable quarter horse and a calf killed by lightning. $3,000 damage at lumberyard.
MONTANA Harlem (12 miles south of), Blaine County	5	7 p.m.					3	4	Thunder, wind, and hail	Property damage from wind.
TEXAS Houston, Harris County	5	7 p.m.			1				Electrical	Young girl struck and killed by lightning.
TEXAS Jefferson County Airport (30 miles southwest of)	5	7 p.m.			0	0			Waterspout	Over Trinity Bay; moved northeastward.
MONTANA Saco (north and east of), Phillips County and Valley County	5	7:30 p.m.	8	*7			1		Hail	Crops complete loss in some sections. Storm moved eastward into western Valley County.
ARKANSAS Des Arc, Prairie County	5	8:45 p.m.				1			Electrical, wind, and rain	1 person injured and several electrical appliances damaged by lightning. Trees and TV antennas blown down. Fields flooded.
MONTANA Hinsdale (north of), Valley County	5	9 p.m.	10	*5			1	5	Hail	Greatest damage in Cache Creek community. Hailstones as big as walnuts. Crop damage 25 to 100 percent.
MONTANA Baylor-Wildrose area, Valley County	5	9 p.m.	10	440			1	4	Hail	Storm moved eastward.
SOUTH DAKOTA Woonsocket (west of), Jerauld County	5					1			Wind	Worker had both feet injured when wind snapped wires on building under construction.
	5									Minor storms also reported in Mesa County, Colo.; at Brady and near Opheim, Mont.; at Taylor, Utah; and in Pierce County, Wash.
MONTANA Northern Lewis and Clark and eastern Teton Counties	5-6	9 p.m.	30-40	*2-10			3	5	Hail	Hailstones up to 1 inch in diameter. Storm moved northeastward.
UTAH Helper-Castle Gate area, Carbon County	6	12:30 p.m.							Rain	About 2 inches of rain in 1/2 hour washed rocks, huge boulders, and mud across US Highway 50-6, 10 miles north of Castle Gate.
FLORIDA West Palm Beach, Palm Beach County	6	3 p.m.			0	0			Waterspout	
NEBRASKA Chadron (8 miles southeast of), Dawes County	6	Late afternoon			1		1	1	Electrical	Farmer in field struck and killed.
NORTH DAKOTA Ward, Renville, and Bottineau Counties	6	Evening	30				5	5	Wind and hail	Elevator damaged at Lansford. Many smaller buildings on farms wrecked or moved and many trees uprooted. Storm moved eastward.
PENNSYLVANIA Meshoppen area, Wyoming County	6	Night					4	1	Electrical	Barn fired by lightning and all contents completely destroyed. 11 cows electrocuted in field.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

AUGUST 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	6									Minor storm also reported at Lordsburg, N. Mex.
RHODE ISLAND Rumford, Providence County	7	3 p.m.			0	0	1	1	Dust devil	Small but strong dust devil ripped shingles and tore awning at 1 house in Rumford, east of Providence. Disturbance moved to nearby house where wind gusts swept through window and knocked over lamp 15 feet inside bedroom. Blind blown down from garage window.
PENNSYLVANIA Allentown (near), Lehigh County	7	Afternoon	** 600	5	0	0	3	1	Tornado	Large carnival tent ripped when baby twister cut path almost right through middle of it. No other damage reported.
UTAH Weber, Davis, Sanpete, and Carbon Counties	7	Afternoon -evening							Wind and rain	Several homes and small buildings damaged. Heavy rain in Carbon County washed over roads and farms and caused rock slide over railroad tracks; section of U.S. Highway 50-6 washed out in Price Canyon. Small bridge washed away at Spring Glen.
INDIANA Brownstown, Jackson County	7	4 p.m.					4	1	Wind and electrical	High winds blew down smoke stacks of packing company. Large barn and shed struck by lightning and burned to ground east of Brownstown. $40,000 property damage by wind, $10,000 by lightning.
FLORIDA Jacksonville area, Duval County	7	5-6 p.m.			0	0			Funnels aloft and waterspouts	Several funnel clouds sighted near Mayport and several waterspouts also reported.
UTAH Salina area, Sevier County	7	5:30 p.m.	1-1/2	50	0	0	4		Tornado	Small tornado moving northward hit western edge of Salina, blowing roofs off turkey processing plant and service station; automobile damaged and small shed demolished.
NEBRASKA Callaway (near), Custer County	7	Evening				1	3	1	Electrical	Many spots struck; fuse boxes and other electrical equipment destroyed. 1 person burned.
NEW MEXICO Escondida	7								Rain	Flash flood in arroyo damaged 2 homes, crops, and gardens.
	7									Minor storms also reported in Montrose and Ouray Counties, Colo.; and at Redmond, Utah.
MONTANA Hogeland, Blaine County	8	5 p.m.		*5			3	5	Hail and wind	Most all damage from hail.
SOUTH DAKOTA Grenville, Day County	8	6-7 p.m.					4		Electrical	60-year old three-story school burned, following lightning strike.
	8									Minor storms also reported at Jewell, Kans.; and near Arnold and Greeley, Nebr.
LOUISIANA Coastal parishes	8-9				2		3	1	Hurricane Bertha	Weak extra-tropical low entered Gulf of Mexico on August 6 and drifted slowly southwest for next 2 days. On 8th, it developed into tropical storm about 100 miles south of mouth of Mississippi River. Storm moved in general northwest direction and crossed coast near Cameron late on 9th. It weakened after moving inland and turned northward through east Texas. Lowest pressure reported 29.46 inches at oil rig at Latitude 28.7 north, Longitude 91.4 west. Several reports of estimated winds of 50 to 70 m.p.h. received from ships at sea and from land stations. Highest tide reported 4.7 feet at Schooner Bayou control structure at west end of Vermilion Bay. Damages from storm small and rainfall so beneficial that it offset any losses. Fishing vessel which radioed for help off southwest pass was never located, so 2 possible deaths listed.
LOUISIANA Quarantine (west of), Plaquemines Parish	9	12:45 p.m.			0	0			Funnel aloft	Observed briefly to west of station.
MASSACHUSETTS Saxonville, Middlesex County	9	2:20 p.m.			0	0	1	1	Dust devil	Sent people scurrying to cover, but no serious damage done.
KANSAS Stevens County	9	Afternoon							Hail	Growing crops damaged across southern part of County by local falls of hail, some fields suffered more than 50 percent loss.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

AUGUST 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WASHINGTON Entire State	9								Electrical	Lightning from scattered thunderstorms over State started several small forest fires and damaged some residences in eastern Washington.
	9									Minor storm also reported at Wakefield, Nebr.
MONTANA Cut Bank, Glacier County	10	3:42 p.m.	10	1320			1	4	Hail	Hailstones as large as 1-1/4 to 3 inches reported. Storm moved northeastward.
MONTANA Toole County (northern half)	10	Afternoon -evening					3	5	Hail	At least 3 different storms struck County in afternoon and evening, widespread. Storms moved northeastward.
MONTANA Liberty County (northern half)	10	5 p.m.	100	*3			4	5	Hail	Hail drifts up to 8 inches by buildings. Hailstones up to 1-1/4 inches in diameter. Storm moved northeastward.
MISSISSIPPI Waveland (15 miles north-northeast of), Harrison County	10	5:23 p.m.			0	0	3	1	Tornado	Touched ground briefly then dissipated; occurred in thinly settled, wooded area; some damage to timber.
MONTANA Hogeland and Turner to Canadian Border, Blaine County	10	8:30 p.m.	50	*20			4	5	Hail and wind	Hailstones up to 2 inches in diameter. Wind estimated at 65 m.p.h., at Turner and 100 m.p.h., at Canadian Border.
RHODE ISLAND Central portion	10	P.m.							Electrical and rain	Lightning struck high voltage line at Narragansett shortly after noon. Power disrupted to several thousand users in many towns of Washington County. Most storm damage occurred in Providence. Lightning damage confined to downed tree limbs and utility poles and streets temporarily flooded. Precipitation of 0.68 inch between 6:20 and 6:50 p.m., observed at WBAS Providence.
MONTANA Hinsdale (north of), Valley County	10	Night						3	Hail	Hailstones as large as hens' eggs fell in Cache Creek community. Crops nearly all harvested, resulting in little damage. Considerable property damage.
	10									Minor storm also reported at Nashua, N. H.
NORTH DAKOTA Sheridan County	11	1 a.m.					4	4	Hail and wind	Much standing grain damaged or completely hailed out. Hail and wind damaged buildings and cars.
CALIFORNIA Palm Springs, Indian Wells, Palm Desert, and Cathedral City areas, Riverside County	11	11 a.m. - 6 p.m.							Rain	Severe thunderstorm with accompanying flash flood knocked out powerlines from Palm Springs to Palm Desert, and partially closed State Highway 111. Storm concentrated near Rancho Mirage, 9 miles east of Palm Springs, where 5 power poles toppled and water sluiced across highway.
MONTANA Geyser, Judith Basin County	11	5:30 p.m.	12	*3					Hail	Hailstones size of golf balls. Airplane 60 miles southeast of Great Falls at 5:25 p.m. (near Geyser area) reported golf-ball size hailstones knocked out astra dome at 10,000 feet M.S.L. Storm moved northeastward.
PENNSYLVANIA Washington, Washington County	11	6-9 p.m.					4	1	Electrical	2 barns and a house fired by lightning, destroying all 3 structures.
MONTANA Winifred, Fergus County	11	6:30 p.m.	40	*3-4			3	4	Hail and wind	Windows and roofs on west damaged by wind-driven hail. Some TV antennas blown over. Storm moved eastward.
	11									Minor storms also reported at Buchanan, Ga.; in northern Henry County; in Campbell County, Ky.; at Bristol, Tenn.; and at Gatesville, Tex.
ARKANSAS Blytheville, Mississippi County	12	1:48 a.m.			0	0	2		Funnel aloft and wind	Funnel sighted by several persons, -- remained about 200 feet in air. Damage due to wind. Storm moved northeastward.
MASSACHUSETTS Hubbardston and Sterling areas, Worcester County	12	4:45 a.m.			0	0			Hail and tornado (suspected)	Oblong and unusual-shaped hail up to 1-3/4 inches at Hubbardston, with some damage to crops. Narrow path 1/5 mile long 1/4 mile north of Sterling with wind damage to trees and utility poles suspected by local resident to be from small tornado.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI Sikeston, Scott County	12	2-3 p.m.				3			Electrical and rain	Lightning damaged 5 homes and business buildings.
MARYLAND Baltimore City and Baltimore County	12	2:30-3:30 p.m.							Wind, electrical, and hail	Strong winds downed trees and some powerlines in scattered districts of metropolitan Baltimore. Lightning damaged dwelling in Dundalk. Hail, size of chesnuts, reported in some sections of Dundalk and nearby Fort Holabird.
NORTH DAKOTA Hettinger and Grant Counties	12	Afternoon					4	4	Wind and hail	2 large barns wrecked and other buildings damaged. Much grain damaged. Storm moved northwestward.
GEORGIA Calhoun, Gordon County	12	3:30 p.m.				1	4	1	Wind	Trailer overturned injuring 1 person. Roofs damaged and many trees uprooted and utility lines downed. 9 cars badly damaged by falling trees.
INDIANA Evansville, Vanderburgh County	12	3:35-5:15 p.m.				1		1	Wind, rain, and electrical	Heavy rain-wind-lightning storm damaged powerlines and flooded streets. 1 person waded into water in street to investigate smoke. He was electrocuted as he approached a "live" wire.
TEXAS Seymour (15 miles southwest of), Baylor and Throckmorton Counties	12	3:50 p.m.	** 700	Narrow	0	0	4		Tornado	Smashed hay barn, unroofed oat barn, and knocked down phone poles and wires; moved northeastward.
GEORGIA Americus (near), Sumter County	12	4 p.m.				1	4	1	Wind, rain, and electrical	Winds toppled 11 telephone poles along highway, 1 falling on moving automobile causing it to wreck and slightly injure driver. Other minor damage to roofs in area.
NORTH CAROLINA Forsyth, Surry and Yadkin Counties	12	4 p.m.						4	Hail	Light damage to 200 acres of tobacco, heavier damage to small area.
OKLAHOMA Oklahoma City, Oklahoma County	12	4 p.m.	20	*4		4		3	Wind, rain, hail, and electrical	Strong winds and golf-ball-sized hail stripped trees of small limbs and leaves, snapped off several utility poles, and damaged utility lines, etc. Automobile accidents caused 2 injuries and 2 resulted from walking into side of automobile during heavy rain. Storm moved southward.
MARYLAND Ocean City, Worcester County	12	Late afternoon							Rain and hail	Severe rainstorm reported preceded by heavy fall of hail.
MARYLAND Easton, Talbot County	12	5 p.m.							Hail	Severe hailstorm lasted about 20 minutes. Hailstones ranged in size from peas to as large as chicken eggs. Some farmers reported heavy crop damage.
COLORADO Costilla County	12	5 p.m.							Rain and hail	Official estimate of 2-1/4 inches of rainfall in 45 minutes flooded Culebra River, which inundated 5,000 acres of rich farm land and flooded many homes in San Luis. Hail accompanied rain and knee-deep drifts observed. Estimated that 50 percent of crops in 5000-acre area completely ruined.
TEXAS Lake Fort Phantom Hill, Jones County	12	5:30-6 p.m.		7	0	0	3		Tornado	Ripped porch off lake cabin, tore off roof and water cooler on roof.
OKLAHOMA Lawton, Comanche County	12	5:45 p.m.					4	1	Wind, rain, and electrical	Winds up to 82 m.p.h., damaged hangars and several planes at airport. 300-foot section of concrete block fence blown over. Minor damage resulted to electric lines. Storm moved east-northeastward.
TEXAS Denison and vicinity, Grayson County	12	6 p.m.					5		Wind	Heavy damage to trees and TV antennas in Denison. Boats and boat houses smashed at Lake Texoma resort. Storm moved northeastward.
SOUTH CAROLINA Florence, Florence County	12	6:22 p.m.	5	*3-1/2			5		Wind and hail	Combination of wind and hail stripped many trees. Considerable wind damage in and around city. Wind damage $140,000, hail damage $10,000. Storm moved southward.
OKLAHOMA Walters area, Cotton County	12	6:30 p.m.						3	Wind, rain, hail, and electrical	Strong winds damaged buildings at several farmsteads, also trees and utilities in area east and north of Walters. Heavy hail fell in spots.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
SOUTH CAROLINA Timmonsville adjoining rural areas, Florence County	12	7:05 p.m.	7	*2			5	5	wind and hail	Several tobacco warehouses damaged, also lesser wind damage in area. (Hail damage to buildings $18,000, to crops $60,000; wind damage $207,000). Storm moved southward.
NORTH DAKOTA Central and eastern portions	12	7:25 p.m.							Rain and wind	Heavy rains, several inches in an hour in some places, caused considerable damage to crops. Deluges washed away swathed grain, floated bales of hay from fields, and flooded some roads. Heaviest damage in Pierce, Grand Forks, Wells, and Stutsman Counties. Basements flooded in Grand Forks, Fessenden, and Carrington. Barn and elevator destroyed near Jamestown. Electricity out at Jamestown and Fargo for short period. Storm moved eastward.

MASSACHUSETTS Rockland, Plymouth County	20	2 p.m.			0	0	1	1	Dust devil	Funnel moving southeastward picked up small trailer and ripped clothes from line.
ARIZONA Prescott (40 miles northwest of), Yavapai County	20	Afternoon			0	0			Tornado	Pilot reported funnel cloud touching ground. No damage reported.
MISSOURI Nodaway County (eastern half)	20	7-9 p.m.							Wind, rain, and electrical	Wind at Maryville Airport estimated 65-70 m.p.h. Many powerlines, telephone lines and trees downed. Storm moved southeastward.
MISSOURI St. Joseph, Buchanan County	20	7:45-8:17 p.m.							Wind	Gusts to 53 kts. at St. Joseph Airport at 8:17 p.m. Many powerlines downed; tree limbs blocked streets.
NEBRASKA Wauneta (near), Chase County	20							3	Hail	Hailstones size of marbles; accumulated on highway to stall traffic; ground covered to depth of 3 inches in spots. Main crop (wheat) had been harvested. Moderate property damage.
	20									Minor storms also reported in Lyon County, Iowa; and at Avoca and Holdredge and near Lyons, Nebr.
OREGON Scattered areas over much of State	20-21	Afternoons - evenings					4	3	Electrical	Widely distributed thunderstorms started a number of range fires and a few small forest fires. 1,200 acres of grassland in Malheur County, 200 acres of grassland on outskirts of John Day, and 4 acres of range land in Silver Lake area burned over.
COLORADO Mesa County	21	10-11:30 a.m.							Rain	Nearly 3 inches of rain came down in 1-1/2 hours, causing flash flood in vicinity of Gateway. Water up to 6 inches deep in homes and business places. 1 bridge washed away and roads washed and covered with dirt, mud, and rocks.
NEVADA Las Vegas, Clark County	21	A.m.					4		Rain	Violent thundershowers washed out highways and caused damage to city streets.
PENNSYLVANIA Harrisburg (near), Dauphin County	21	2:30 p.m.			0	0	2	1	Tornado	Baby twister lifted small pavilion about 20 feet into air and carried it some 30 feet. Impact of it hitting ground completely destroyed it.
COLORADO Jefferson, Denver, and Arapahoe Counties	21	Afternoon				1			Rain and electrical	Heavy rain in mountains caused flash floods in Mt. Vernon and Bear Creek Canyons. Bridge washed out at Idledale on Bear Creek, temporarily stranding several families. Bear and Vernon Creeks crested at Morrison at same time, flooding business section. Considerable damage to homes and cabins along flooded streams and some private bridges to homes across creek washed out. 1 resident of Kittredge estimated damage of $5,000 to his home. Some flooding of South Platte River in southwestern Denver and heavy rains flooded streets and caused some damage to homes in Golden, Lakewood, Edgewater, and Arvada. 10-year old boy hospitalized after being struck by lightning in Aurora.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

AUGUST 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MASSACHUSETTS Pittsfield, Berkshire County	21	5 p.m.					5	1	Rain and wind	Gullywashing cloudburst, said to be worst in memory of residents, flooded basements and streets when 3 inches of rain fell in little over 1 hour. Wind damage slight, but some trees or branches fell on powerlines. Most utility outages due to floods. 6 families evacuated from their homes.
IDAHO Butte and Custer Counties	21								Rain, hail, and wind	Serious damage to crops near Arco, Moore, Darlington, Leslie, and Mackay. Hailstones as large as marbles, ground white. Storm moved eastward.
CONNECTICUT Central portion	21-22	5 p.m. 21st - 2 a.m. 22d					3	2	Electrical, rain, and hail	Unusual electrical storm, occurring under dominant anticyclonic circulation at surface, produced heavy rains, principally in New Haven County and Storrs area of Tolland County. Official measurements of 1.50 to 2.50 inches in affected areas, although unofficial observer at Storrs measured 4.50 inches. Extensive street flooding, with reports of basement and store flooding in Meriden but latter damage minor. Flash flooding of small stream at Storrs resulted in drowning of 2 cows for $500 loss. Numerous lightning strikes in Wallingford-Hamden-Waterbury areas resulted in some structural damages. Extensive power and telephone disruptions. Marble-sized hail at Cheshire caused minor crop damage. Rainfall greatly replenished depleted reservoirs, but runoff too heavy to greatly benefit drought-stricken crops. Storm moved southeastward.
UTAH Kanab area, Kane County	22	Afternoon							Rain	Heavy rain washed out several culverts and roads in Kanab area.
COLORADO Merino and Atwood, Logan County	22	5-6 p.m.	8	*5				5	Hail	Hail mostly 3/4 inches in diameter, with some of 1 inch. Storm moved eastward.
SOUTH DAKOTA Spencer, McCook County	22	9:20 p.m.			0	0			Funnel aloft	Public report.
SOUTH DAKOTA Minnehaha County	22	10:38 p.m.			0	0			Funnel aloft	Pilot report.
SOUTH DAKOTA Statewide	22					2	2		Electrical	At Burke, lightning cracked full length of a chimney. At Roubaix Lake in Black Hills, 2 National Guardsmen stunned when stroke apparently hit a field phone wire. At Sioux Falls, dirt showered on nearby houses when lightning dug hole 1 foot deep and 2 feet across.
	22									Minor storms also reported at Tucson, Ariz.; and at Howe, Idaho.
FLORIDA Pass-a-Grille, Pinellas County	23	5 p.m.			0	0			Funnel aloft and waterspout	Several funnel clouds sighted, 1 believed to have been waterspout.
FLORIDA Clearwater, Pinellas County	23	Evening			2				Wind	High winds in Gulf of Mexico off Clearwater contributed to sinking of shrimp boat, 2 fishermen missing and presumed lost.
	23									Minor storm also reported in O'Brien County, Iowa.
FLORIDA Tavernier, Monroe County	24	10:30 a.m.			0	0			Waterspout	
FLORIDA Orlando, Orange County	24	Afternoon							Wind and electrical	Strong winds, with gusts to 60 m.p.h., downed Highway Patrol radio tower and numerous trees and disrupted power services generally.
NORTH DAKOTA Dunn Center (near), Dunn County	24				0	0			Funnel aloft	Zigzag path, mostly southwestward.
ARIZONA Prescott, Yavapai County	25	Afternoon			1	1	1	1	Electrical	Lightning killed girl and injured her companion.
UTAH Kanab, Kane County	25	3:15 p.m.					3	3	Hail	Hail 2 inches deep accumulated during 10-minute hailstorm; gardens flattened; several roofs damaged, and when hail melted some flooding occurred.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
PENNSYLVANIA York area, York County	25	5-8 p.m.					4	1	Electrical	Lightning struck and set fire to barn, completely destroying structure and contents. Storm moved northeastward.
MARYLAND Hills Point, Dorchester County	25	Night		1000					Wind and rain	Sudden windstorm like an immature twister swept 1,000 yard path through Hills Point area, ripping roofs from small buildings and uprooting trees. About one-half the dwellings in this community suffered minor damage. Windlash came during severe rainstorm.
NEW MEXICO Winston, Sierra County	25								Rain	Flash flooding caused by rains up to estimated 5 inches; damaged several homes.
NEW MEXICO Socorro (near), Socorro County	25				2				Rain	Child drowned as car overturned in flooded arroyo.
	25									Minor storm also reported at Jewell, Iowa.
CONNECTICUT Fairfield County	25-26	A.m. 25th - p.m. 26th							Electrical and rain	As storm of more or less gentle rain covered State, thunderstorm activity erupted on evening of 25th in Stamford-Bridgeport areas. Lightning bolt knocked out feeder line on electrified railroad in Norwalk. Trains between New Haven and New York stalled or delayed for several hours. House in Stamford struck by lightning, with some damage resulting from fire. Telephone and power failures to 700 users.
MASSACHUSETTS Cape Cod and Martha's Vineyard areas	25-26	Near midnight					3	1	Rain, wind, and electrical	Rains and high tide undermined 2 cottages at Dennisport and washing rains collapsed foundation wall of new building at Edgartown. Some road washouts occurred. Minor damage from lightning. Wind felled some trees and interrupted utility service.
IOWA Central portion	26	Early a.m.					4	1	Electrical	Some farm buildings burned and others damaged.
IDAHO Inkom, Bannock County	26	1 p.m.							Rain and hail	Heavy damage to wheat crops, loss estimated to 50 percent of crop on 1 farm. Water roared down Rapid Creek through Inkom about 5:30 p.m., in second flash flood in 11 days. At least $1,000 road damage.
NORTH CAROLINA Carteret, Craven, Edgecombe, Franklin, Lenoir, Nash, and Vance Counties	26	4-6 p.m.					4	5	Hail, wind, rain, and electrical	Widespread thunderstorms in east caused hail damage to tobacco crop, structural damage due to wind and lightning fires, and some local overflow of storm-drainage facilities.
NEBRASKA Martin Keith County	26	5:05 p.m.					4	1	Electrical	Depot struck and burned, furniture also lost.
COLORADO Rifle (near), Garfield County	26	6:30 p.m.			1				Electrical	15-year old boy killed by lightning while working in hay field.
KANSAS Comanche County	26	8 p.m.			1				Electrical	Man struck by lightning and killed while plowing with tractor, 14 miles south and 3 west of Coldwater. Prairie fire started by lightning about same time nearby.
TEXAS Perryton and vicinity, Ochiltree County	26					3	3		Wind and electrical	2 persons injured when trailer overturned; child injured when shed blew down. Carports blown off, roofs damaged, fences shattered, windows broken, tree limbs knocked down and 1 home struck by lightning.
	26									Minor storms also reported at Scottsdale and Tempe, Ariz.; in Mesa County, Colo.; and at Etna, Wyo.
KANSAS Toronto (10 miles east of), Woodson County	27	4 a.m.							Electrical	Large barn and 3500 bales of hay burned when struck by lightning.
KANSAS Stafford County	27	Early morning							Electrical	7-room farm home about 1 mile north of Pratt-Stafford County line struck by lightning. No one was at home at the time. Passing motorist discovered the blaze at 3:10 a.m., but too late to save anything.

See footnotes at end of table.

9 $500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

AUGUST 1957

There was no major flooding during August. Considerable damage resulted from the flash floods, the most damaging one being the flash flood on the Little Red River at Heber Springs, Ark.

ATLANTIC SLOPE DRAINAGE

The light flooding on the Cape Fear River at Elizabethtown, N. C., on the 27th was due to rainfall averaging 2.3 inches during the 4-day period from the 23d through the 26th. No damage was reported.

MISSISSIPPI SYSTEM

Missouri Basin.--Heavy rains in the mountains west of Denver, Colo., caused flash floods in Mt. Vernon and Bear Creeks Canyons during the afternoon of the 21st. A wall of water, 6 to 8 feet high, came down Bryan Gulch into Bear Creek near Idledale, Colo., washing out a bridge and temporarily stranding several families. Swollen Bear and Vernon Creeks crested at Morrison, Colo., at the same time and overflowed into the business district, pushing heavy logs and debris into streets and blocking traffic. There was considerable damage to homes and cabins along the flooded streams, and some private bridges to homes across the creek were washed out. Four to 5 feet of water overflowed from Bear Creek in the Sheridan area near Denver, Colo., where a boy was rescued from a sand bar when he was trapped by flood waters. The rush of water temporarily swelled the South Platte River, and debris carried by the water threatened damage to several southwest Denver bridges. There was some damage to homes in Golden, Lakewood, Edgewater, and Arvada, Colo.

Minor overflows occurred along the Little Blue River in Nebraska and Kansas on the 16th to the 18th with negligible damage.

White Basin.--Excessively heavy rains (more than 8 inches) over a large area of north-central Arkansas during the afternoon and evening of August 12 and the morning of the 13th caused flash flooding with unusually high water being reported on several creeks. Streets and buildings were flooded in the cities of Mansfield, Clarksville, Russellville, and Clinton. Heavy rains in northeastern Arkansas on the 13th and 14th caused flash flooding in eastern Green County. There was considerable damage to roads and bridges in the area. A Missouri Pacific freight train was derailed when it ran into a section of flooded track. Several fields in the area were flooded.

A flash rise on the Little Red River at Heber Springs, Ark., on the 14th sent the stream to a crest of 44.2 feet, 20.2 feet above flood stage. The rise further downstream was considerably less and crested at a stage of 36.5 feet, 6.5 feet above flood stage at Judsonia, Ark., on the 16th. High flow from the Little Red River caused a rise to slightly above flood stage on the White River at Georgetown, Ark., and downstream. Extensive damage occurred from the flash floods. Two persons lost their lives in Conway County, Ark., when Cypress Creek overflowed its banks.

Arkansas Basin.--Heavy thundershowers on the 3d, east of Pueblo, Colo., caused some damage near Baxter Arroyo for the second time within a week. About 15 to 20 acres of cropland were flooded. A rural bridge across the Arroyo in this area was also washed out. A flash flood occurred during the evening of the 27th on the St. Charles River above Beulah, Colo., due to heavy thundershowers. A bridge was washed out on the Burnt Mill Road.

Slight flooding occurred on the Petit Jean River at Danville, Ark., on the 13th, 14th, and 16th.

WEST GULF OF MEXICO DRAINAGE

The light flooding in the Trinity River at Liberty, Tex., from the 11th to the 17th, was due to excessive rains from tropical storm "Bertha" on the 10th. The rainfall amounts for the 48-hour period ending at 7 a.m. on the 11th ranged from 2 to 11 inches with the heaviest amounts around Long Lake.

Flood stage was exceeded slightly on the Rio Grande at Albuquerque, New Mex., several times due to moderate to locally heavy rains in the basin above that point. Streamflow was contained well within the levees and no damage resulted.

Tropical Storm BERTHA, August 8-11, 1957

Compiled by
HOWARD C. SUMNER
U. S. Weather Bureau, Washington, D. C.

Tropical storm BERTHA developed over the northern Gulf of Mexico in an area of disturbed conditions that prevailed about 100 miles south of the mouth of the Mississippi River on August 8, 1957. At this stage of development the storm was accompanied by winds of 30 to 40 m.p.h. in scattered squalls, with winds slightly higher in some of the heavier squalls. From this region the storm, moving in a northwesterly direction, crossed the coastline near Cameron, La., during the late afternoon of the 9th of August and at 7 p.m. (c.s.t.) was centered about 20 miles south of Lake Charles, La. After moving inland the storm weakened and turned northward, passing through east Texas and reaching southeastern Oklahoma during the morning of the 11th of August. In this area the center could no longer be distinguished on a surface map, although a circulation aloft was accompanied by locally heavy rains for about 3 days as the storm area turned eastward and moved across northern Arkansas.

The lowest pressure reported along the coast was 1001 millibars (29.56 inches) from the Weather Bureau Airport Station at Jefferson County Airport, Beaumont, Tex. A slightly lower pressure 997.6 millibars (29.46 inches) was reported from an oil rig located at latitude 28.7°N., longitude 91.4°W.

Estimates of winds between 50 and 70 m.p.h. came from a number of ships and land stations. The Weather Bureau Airport Station at Beaumont, Tex., recorded a fastest mile of 44 m.p.h. from the north with gusts to 52 m.p.h.

Excessive rainfall of 12.8 inches was reported from a location 14 miles north of Palestine, Tex., during passage of the storm. At Livingston, Tex., rainfall associated with BERTHA was reported as 10.73 inches. Locally heavy rains sent the Trinity River past flood stage and spread its waters 6 miles wide at a point near Liberty, Tex. There was some flooding of homes and business places in Trinity and nearby Livingston, but no heavy damage or casualties were reported in this area. A report of a highest tide of 4.7 feet came from the Schooner Bayou control structure at the west end of Vermilion Bay.

As a result of the severe threat that BERTHA posed to the Louisiana and Texas coasts, thousands of persons were evacuated from low-lying areas. Only the sheriff and 12 men remained in Cameron, which less than 3 months before had been devastated by AUDREY, the first hurricane of the season. Some 1,350 workers were removed from oil drilling platforms in the Gulf of Mexico, two of whom were rescued by a helicopter from the oil rig tender MURMANILL No. 1 shortly before she sank stern first in choppy seas about 3 miles south of Tambalier Bay.

The remnants of Tropical Storm BERTHA caused excessive heavy rains over a large area of west-central and north-central Arkansas during the afternoon and evening of August 12 and the morning of the 13th. The rains caused considerable flash flooding over a large area with unusually high waters reported on several creeks. A flash flood on the Little Red River reached a crest of 44.2 feet (20.2 feet above flood stage) at Heber Springs at 7:00 a.m., of the 14th and 36.5 feet (6.5 feet above flood stage) at Judsonia at 4:30 a.m., of the 16th. Streets and buildings were flooded in the towns of Mansfield, Clarksville, and Clinton.

Damage from this flash flooding was spread over a large area comprising portions of 14 counties. Since much of the damage was of a local nature, accurate estimates of the monetary losses involved are very difficult to obtain. Heaviest reported damage was $113,000 in Conway County, $100,000 of which was to roads and bridges. Faulkner County reported $102,850 damage, $35,000 of which was to roads and bridges. Scott County reported $11,800 damage, $1,500 of which was to roads and bridges. Two persons drowned in Conway County when Cypress Creek overflowed and washed away their home.

A continuation of the storm moved into the northeastern portion of the state on the 13th and 14th, with unofficial precipitation amounts of as much as 12 inches reported. This rain caused flash floods over eastern Greene and southern Clay Counties. Clay County authorities estimate the damage from the flash floods at $710,000, of which $500,000 was to crops in flooded fields and $100,000 to roads and bridges. A Missouri Pacific freight train was derailed when it ran onto a flooded section of track near Knobel in southern Clay County.

TRACK OF TROPICAL STORM BERTHA
August 8-11, 1957

Open circles on track indicate locations of center at 7 a.m., E.S.T., of date entered nearby; solid circles on track indicate locations of center at 7 p.m., E.S.T.

15	21	28,959	-40.7		85	25.5

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 7 obs., 31,638 m., -37.8°C.
2/ 10 mb., 10 obs., 31,636 m., -37.0°C.
3/ 10 mb., 9 obs., 31,739 m., -38.5°C.
4/ 10 mb., 18 obs., 31,859 m., -36.7°C.
5/ 10 mb., 15 obs., 31,678 m., -41.1°C.
6/ 10 mb., 10 obs., 31,714 m., -38.8°C.
7/ 10 mb., 12 obs., 31,679 m., -38.0°C.
8/ 10 mb., 7 obs., 31,519 m., -40.7°C.
9/ 10 mb., 12 obs., 31,735 m., -37.5°C.

15	16	29,011	-39.2		94	16.2

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb , 13 obs., 31,731 m., -35.7°C.
2/ 10 mb., 7 obs., 31,727 m., -36.6°C.
3/ 10 mb., 16 obs., 31,465 m., -42.0°C.
4/ 10 mb., 7 obs., 31,873 m., -35.7°C.

20	20	26,791	-46.9		88	43.3
15	11	28,708	-44.2			

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 22 obs., 31,776 m., -38.7°C, 92 dir., 6.3 speed
7 mb., 16 obs., 34,212 m., -35.9°C, 102 dir., 3 9 speed

15	12	29,044	-39.7			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 6 obs., 31,663 m., -39.6°C.
2/ 10 mb., 6 obs., 31,529 m., -41.4°C.
3/ 10 mb., 13 obs., 31,712 m., -39.1°C.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 15 obs., 31,729 m., -39.4°C.
2/ 10 mb., 9 obs., 31,431 m., -41.6°C.
3/ 10 mb., 5 obs., 31,361 m., -38.7°C.
4/ 10 mb., 9 obs., 31,708 m., -38.0 C
5/ 10 mb., 7 obs., 31,648 m., -38.1°C.
6/ 10 mb., 14 obs., 31,580 m., -37.0°C.
7/ 10 mb., 21 obs., 31,630 m., -40.3°C., 123 dir., 8.9 speed
7 mb., 18 obs., 34,067 m., -37.5°C., 106 dir., 5.8 speed
5 mb., 6 obs., 36,296 m., -37.5°C.
8/ 10 mb., 15 obs., 31,258 m., -40.9°C.
7 mb., 10 obs., 33,666 m., -39.1°C.
† 10 mb., 8 obs., 31,675 m., -37.3°C.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 13 obs., 31,647 m., -38.7°C.
2/ 10 mb., 13 obs., 31,764 m., -36.6°C.

Note Langley is the unit used to denote one gram calorie per square centimeter

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

AUGUST 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	*254	334	377	*164	409	399	351	315	356	290	341	322	244	*289	*144	340	*234	*66	*16	282	313	337	240	*156	*62	*296	305	267	261	306	312	270

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys. AUGUST 1957

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

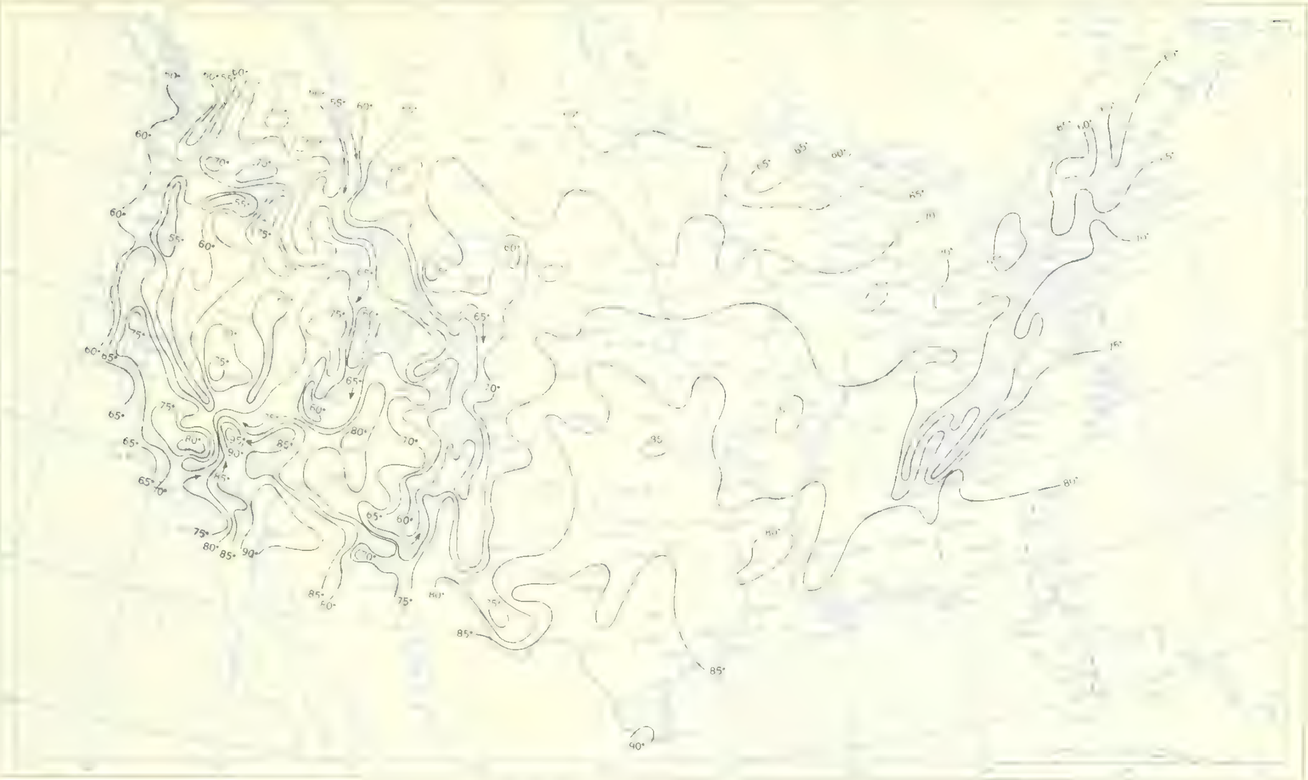
CHANGE IN CLIMATOLOGICAL CHARTS

Beginning on June 1, 1957, a change was made in surface observation times. This has had the following effect on the charts listed below. Charts not listed are not affected.

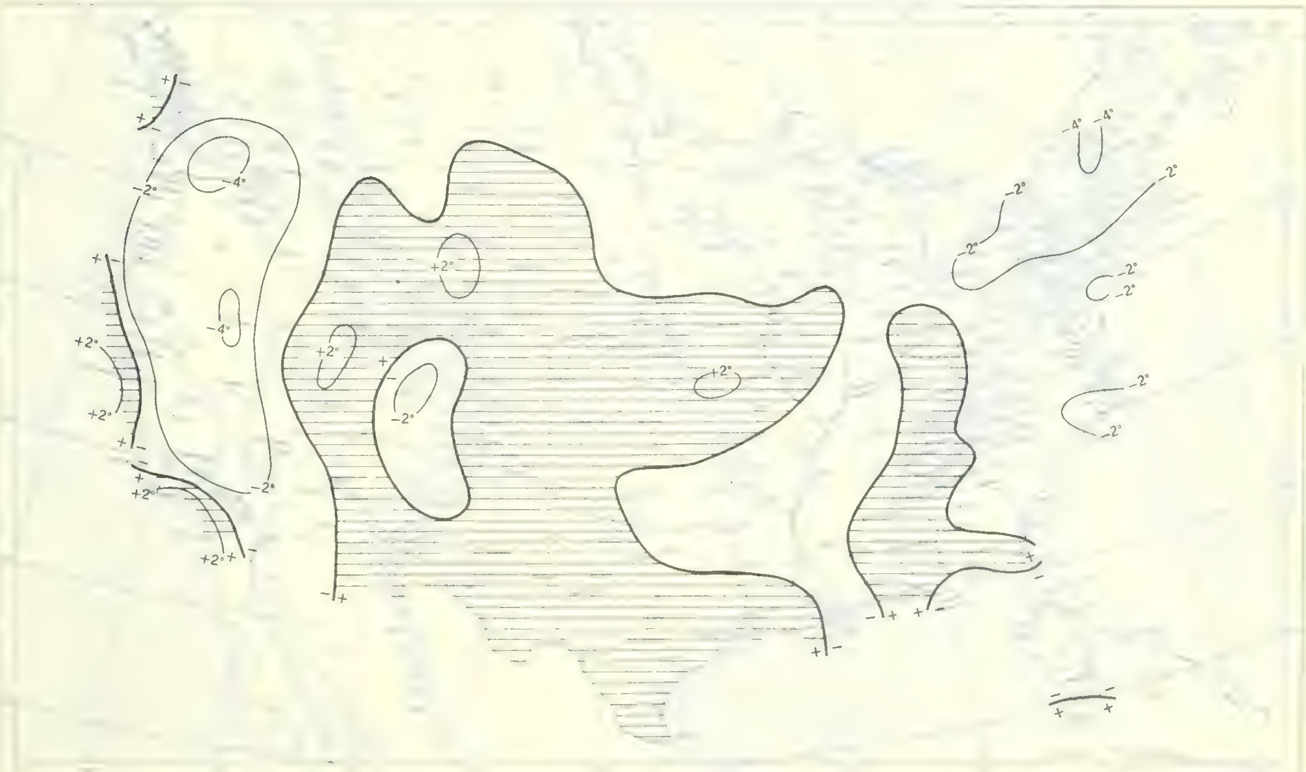
Chart V-B. Snow depth is now measured at 7 a.m. EST instead of 7:30.
Charts IX and X. Circle indicates cyclone and anticyclone positions at 7 a.m. EST instead of 7:30.
Chart XI. Average sea-level pressure is computed from the 7 a.m. and p.m. EST readings instead of 7:30 a.m. and p.m.
Charts XII-XVII. All the upper-air charts are now for 1200 GMT instead of 0300 GMT. All winds are based on rawinsonde observations. Use of pibal data has been discontinued in these charts.

NWRC, Asheville, N. C. --- 11/13/57 --- 1850

Chart I. A. Average Temperature (°F.) at Surface, August 1957.

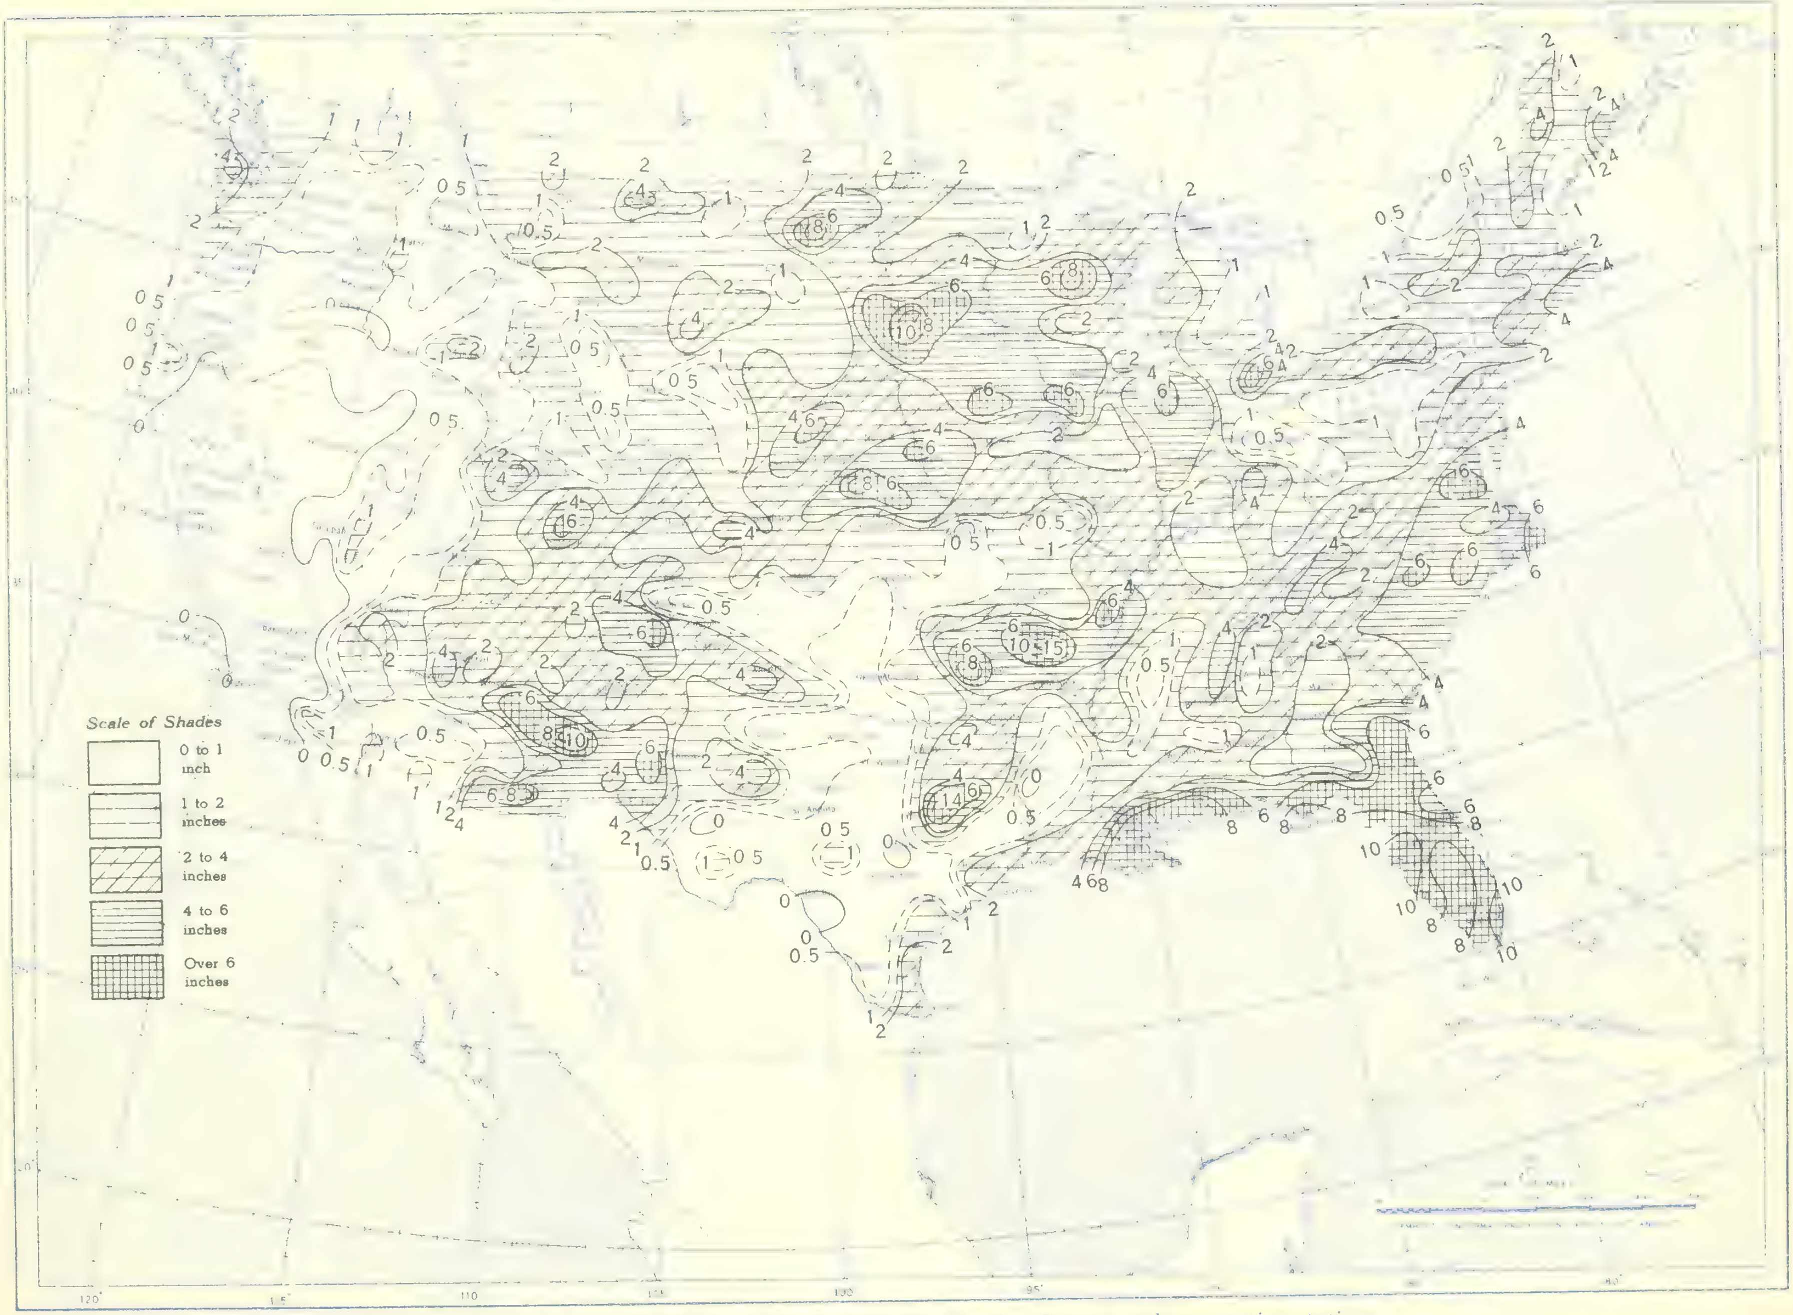


B. Departure of Average Temperature from Normal (°F.), August 1957.



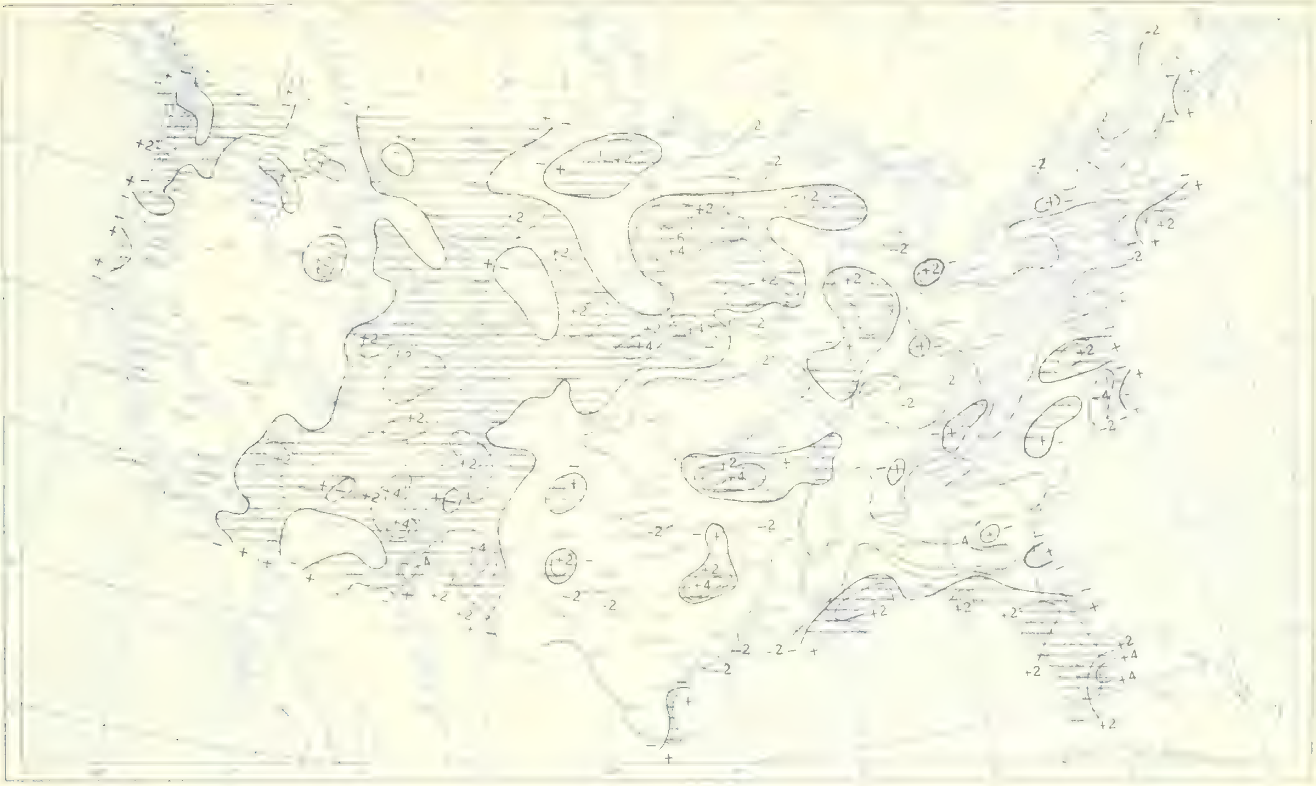
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), August 1957.

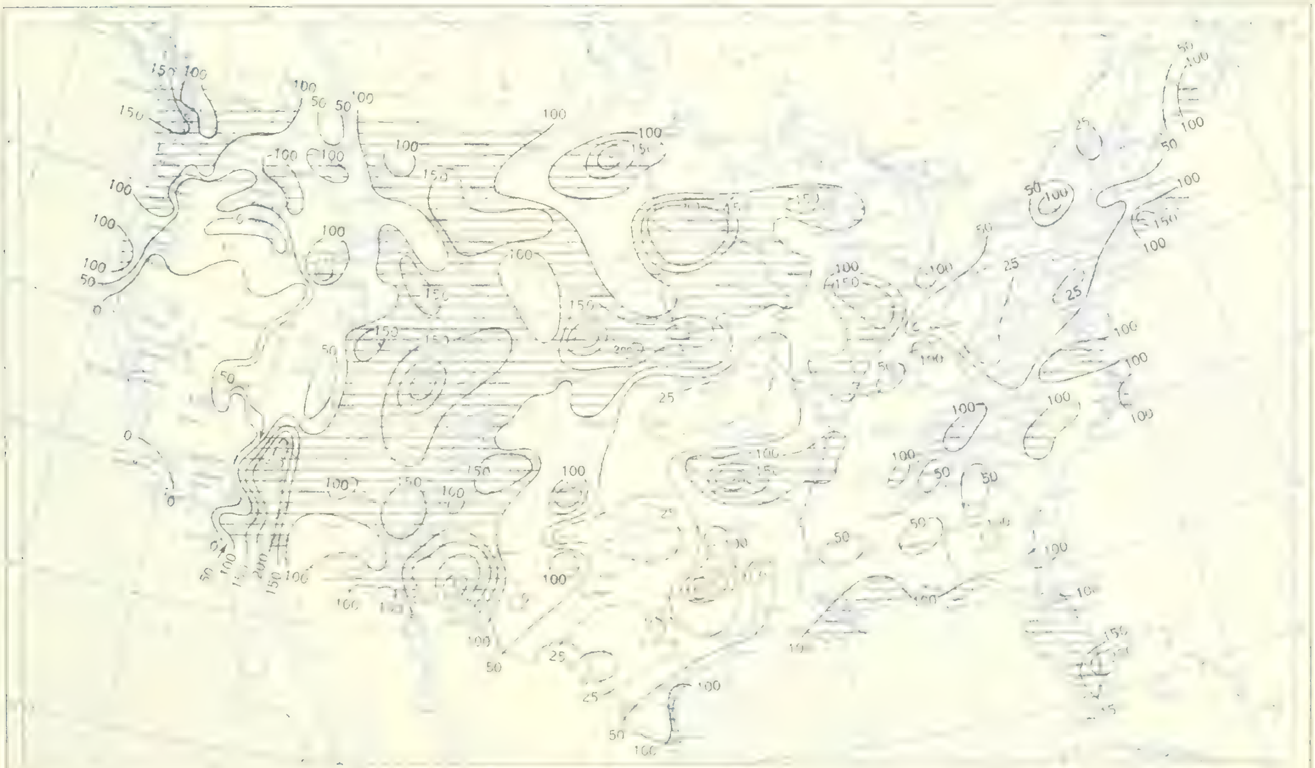


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), August 1957.

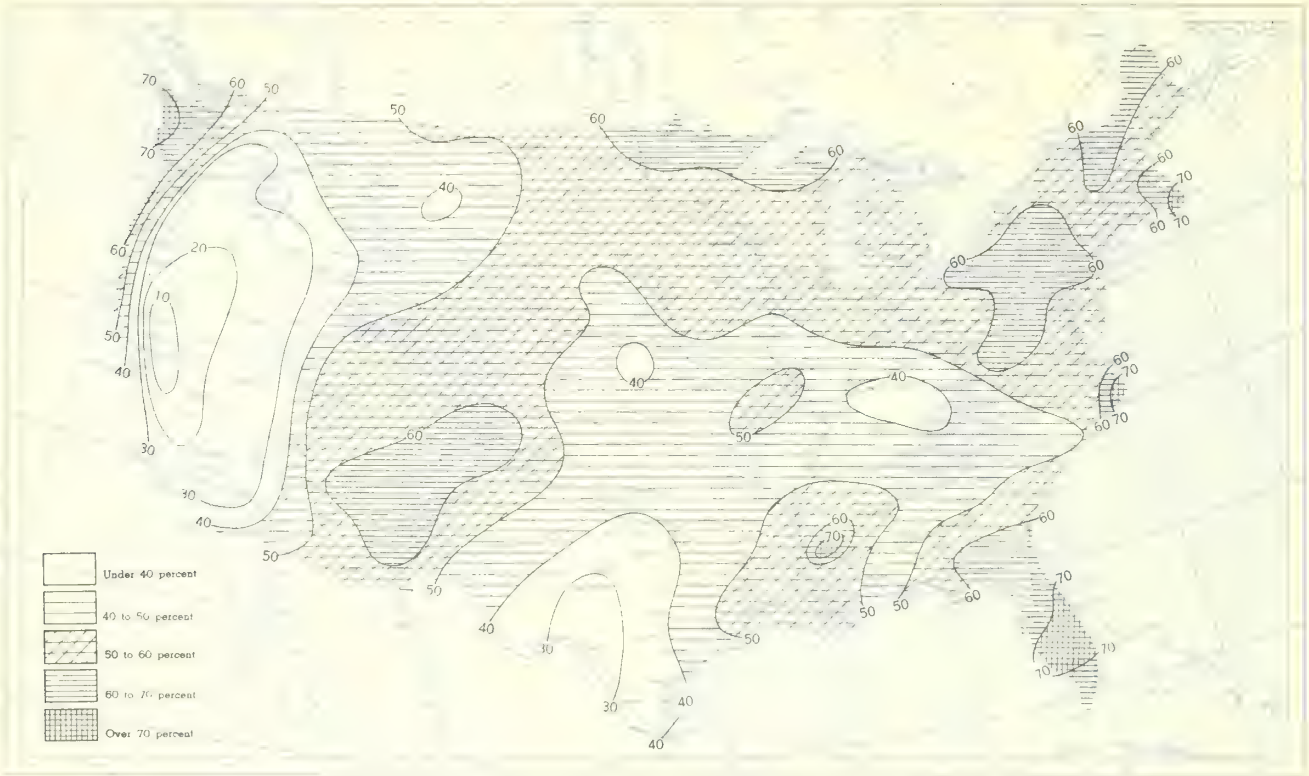


B. Percentage of Normal Precipitation, August 1957.

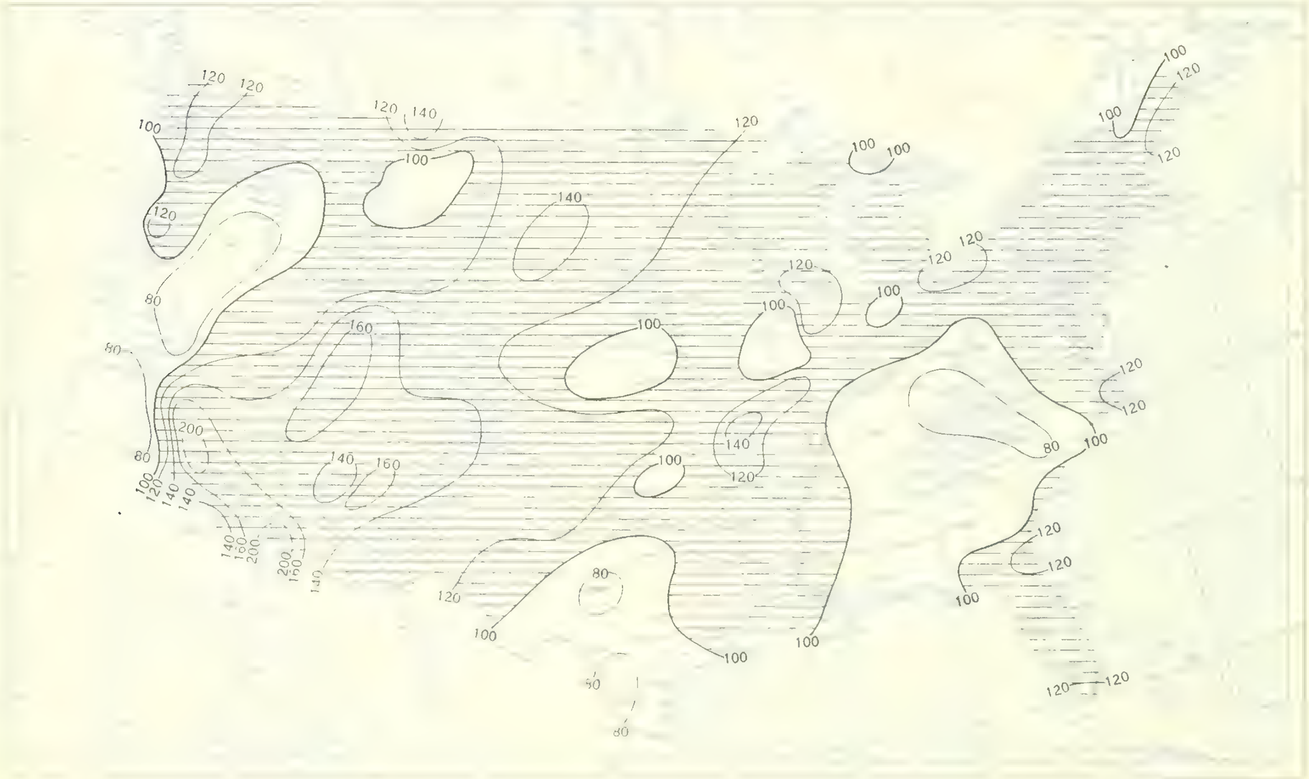


Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, August 1957.

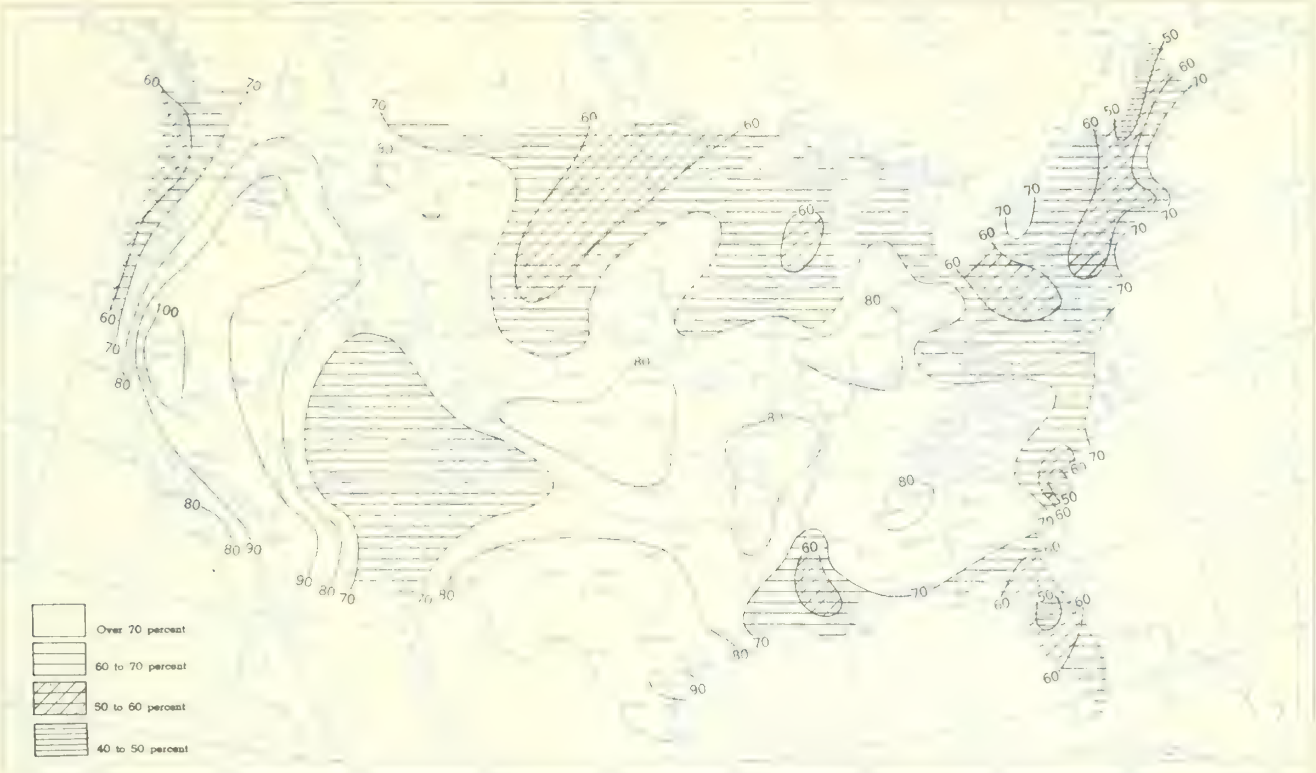


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, August 1957.

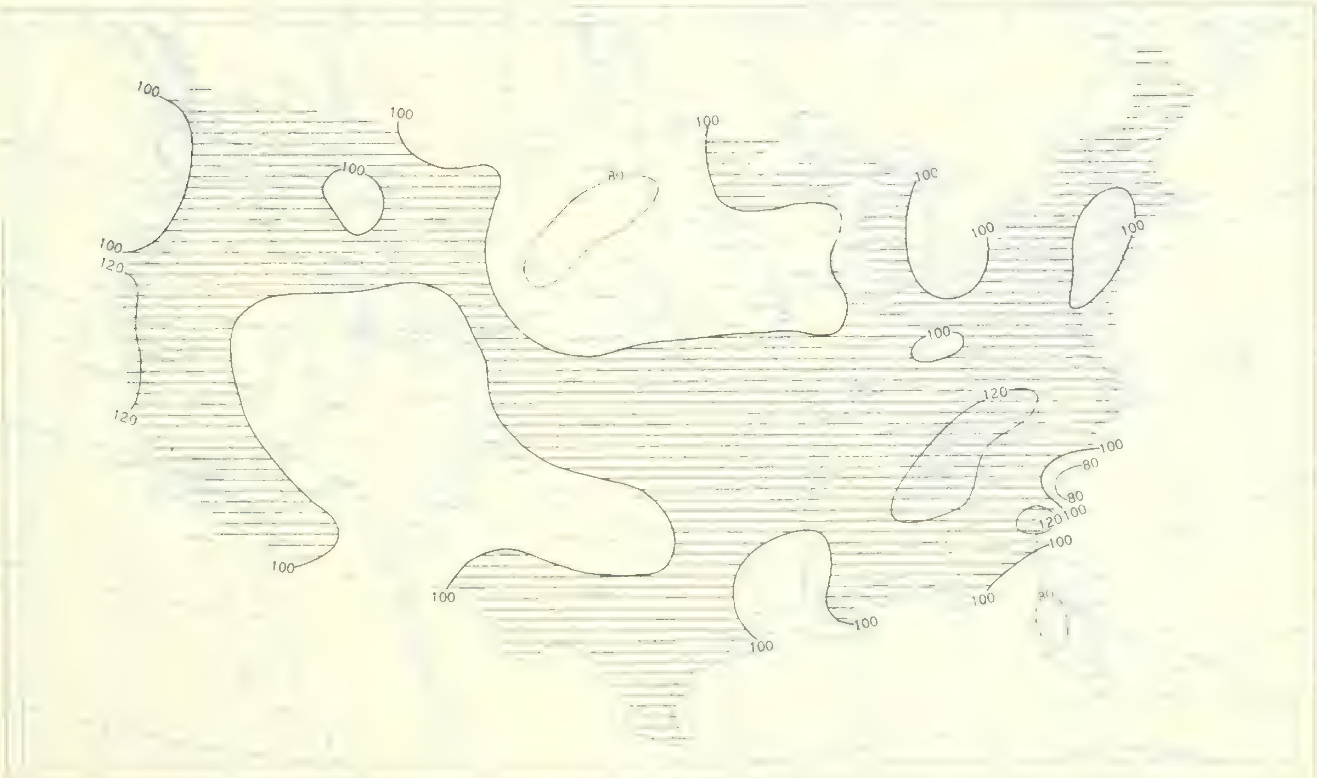


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, August 1957.



B. Percentage of Normal Sunshine, August 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, August 1957. Inset: Percentage of Mean Daily Solar Radiation, August 1957. (Mean based on period 1951-55.)

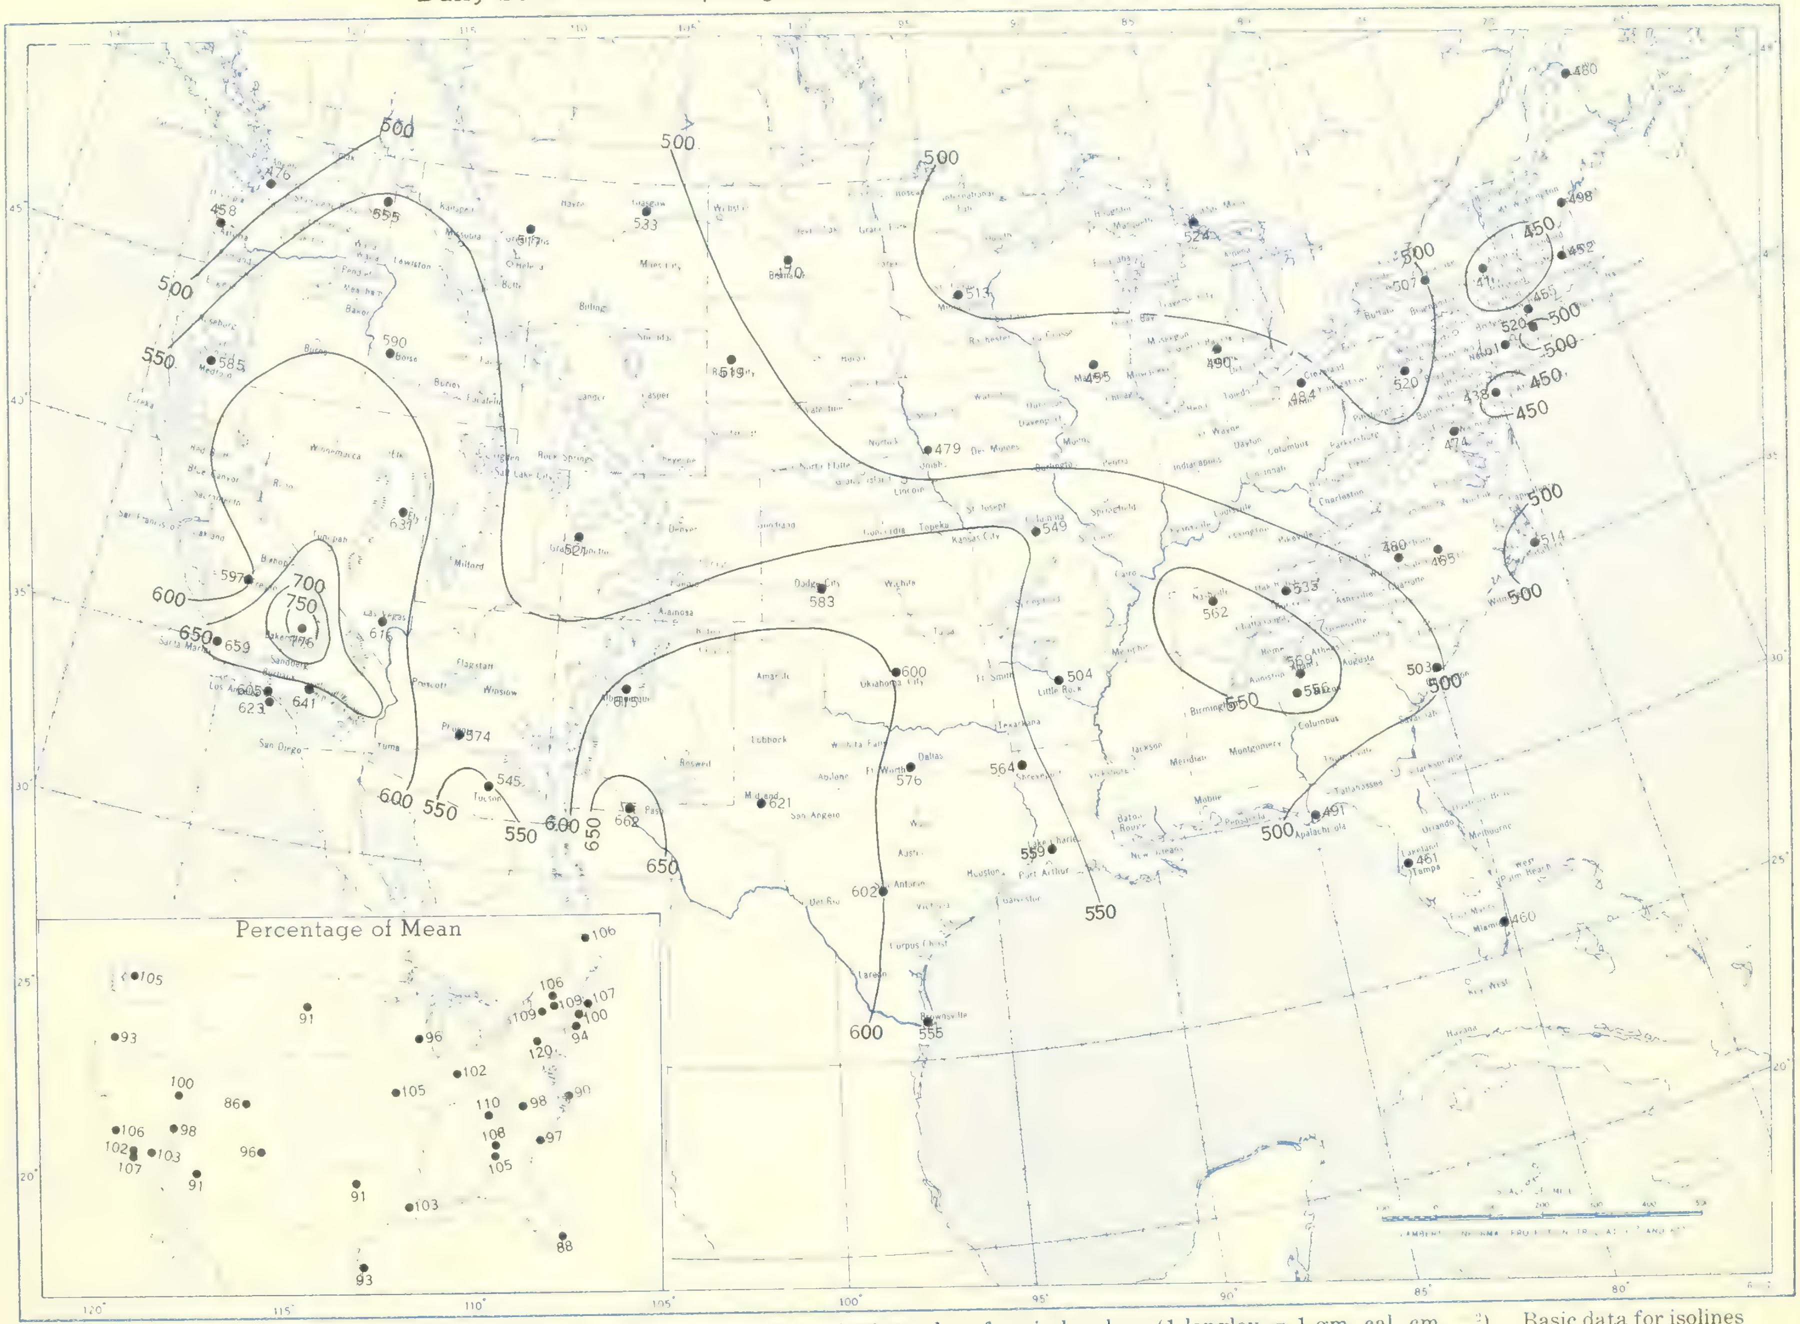


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

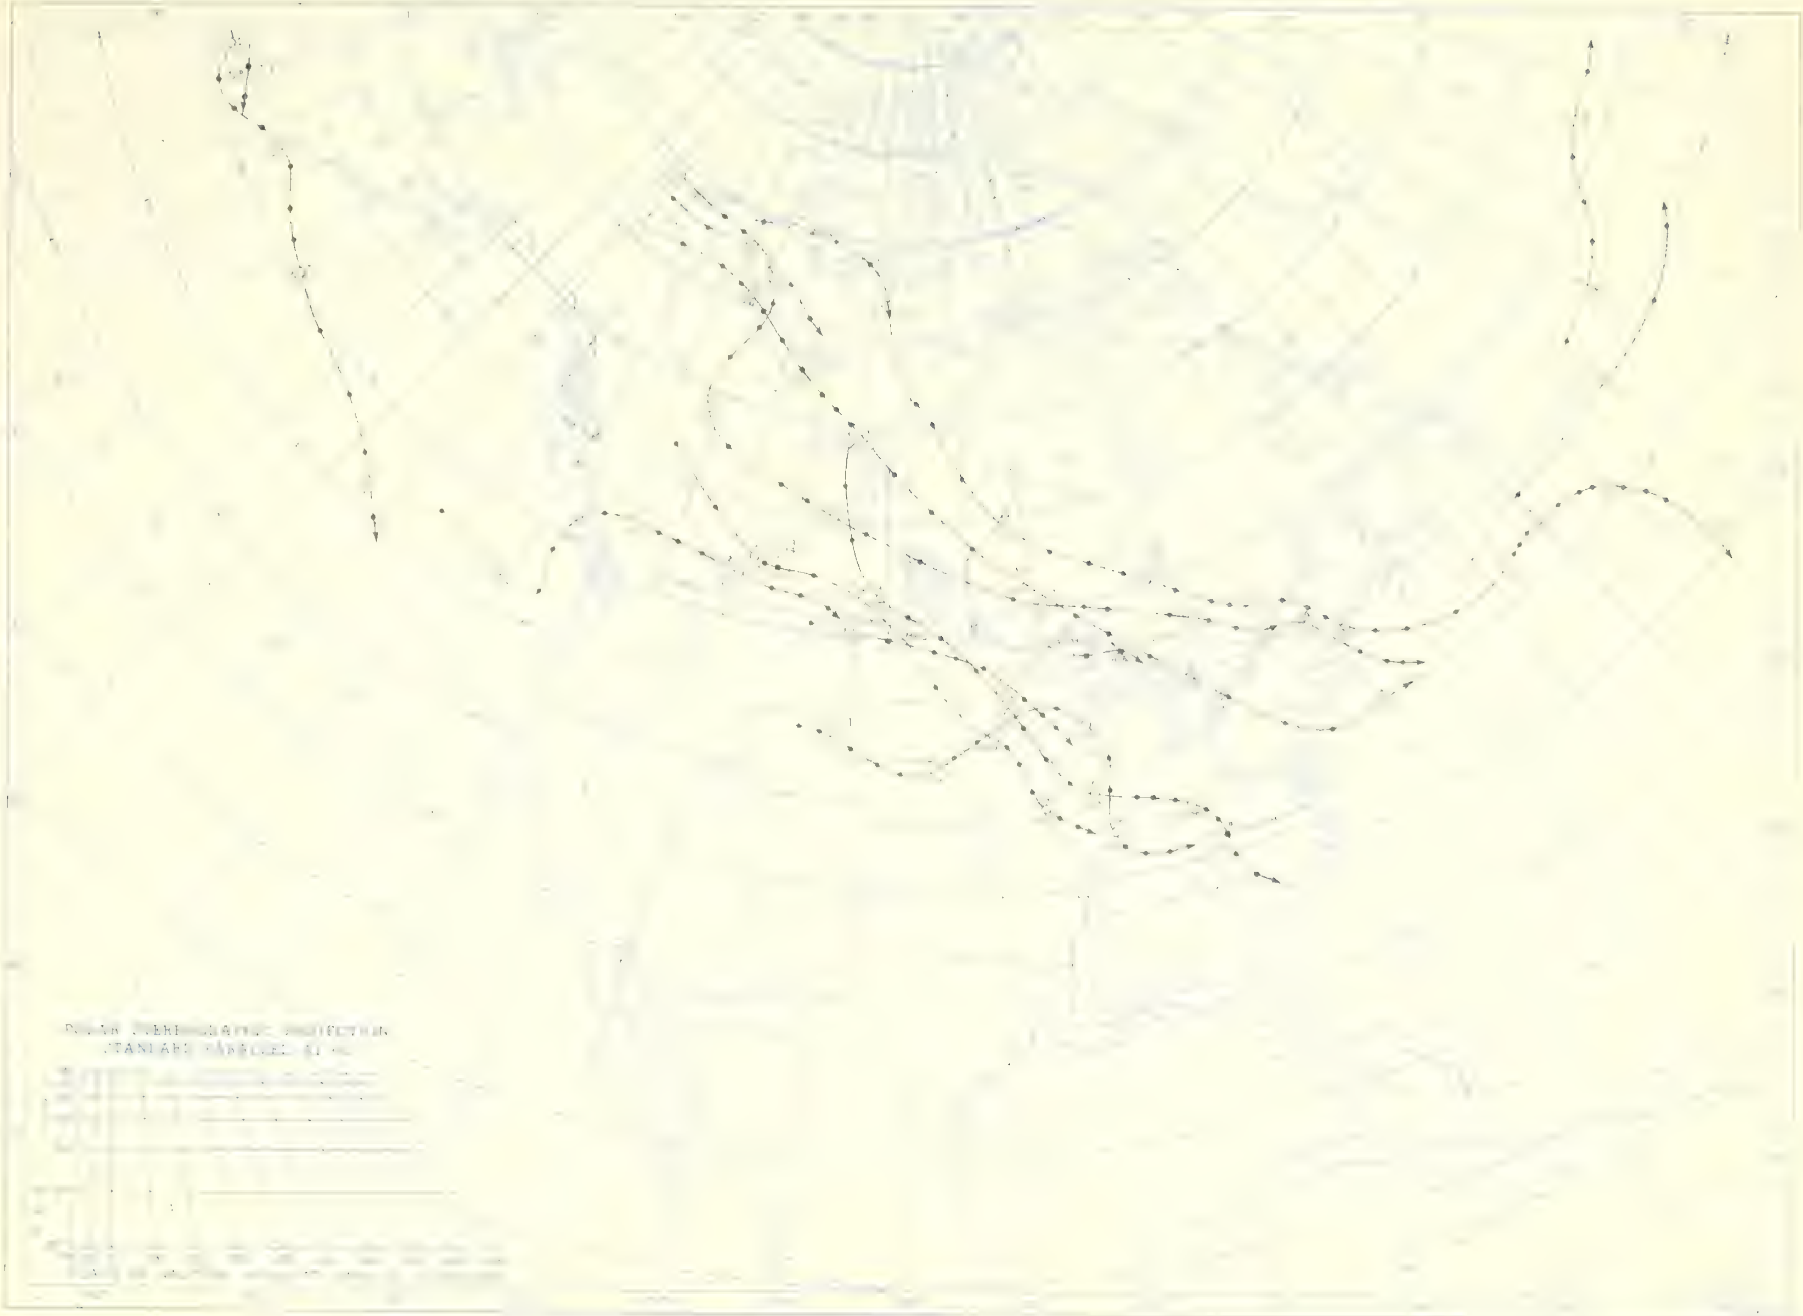
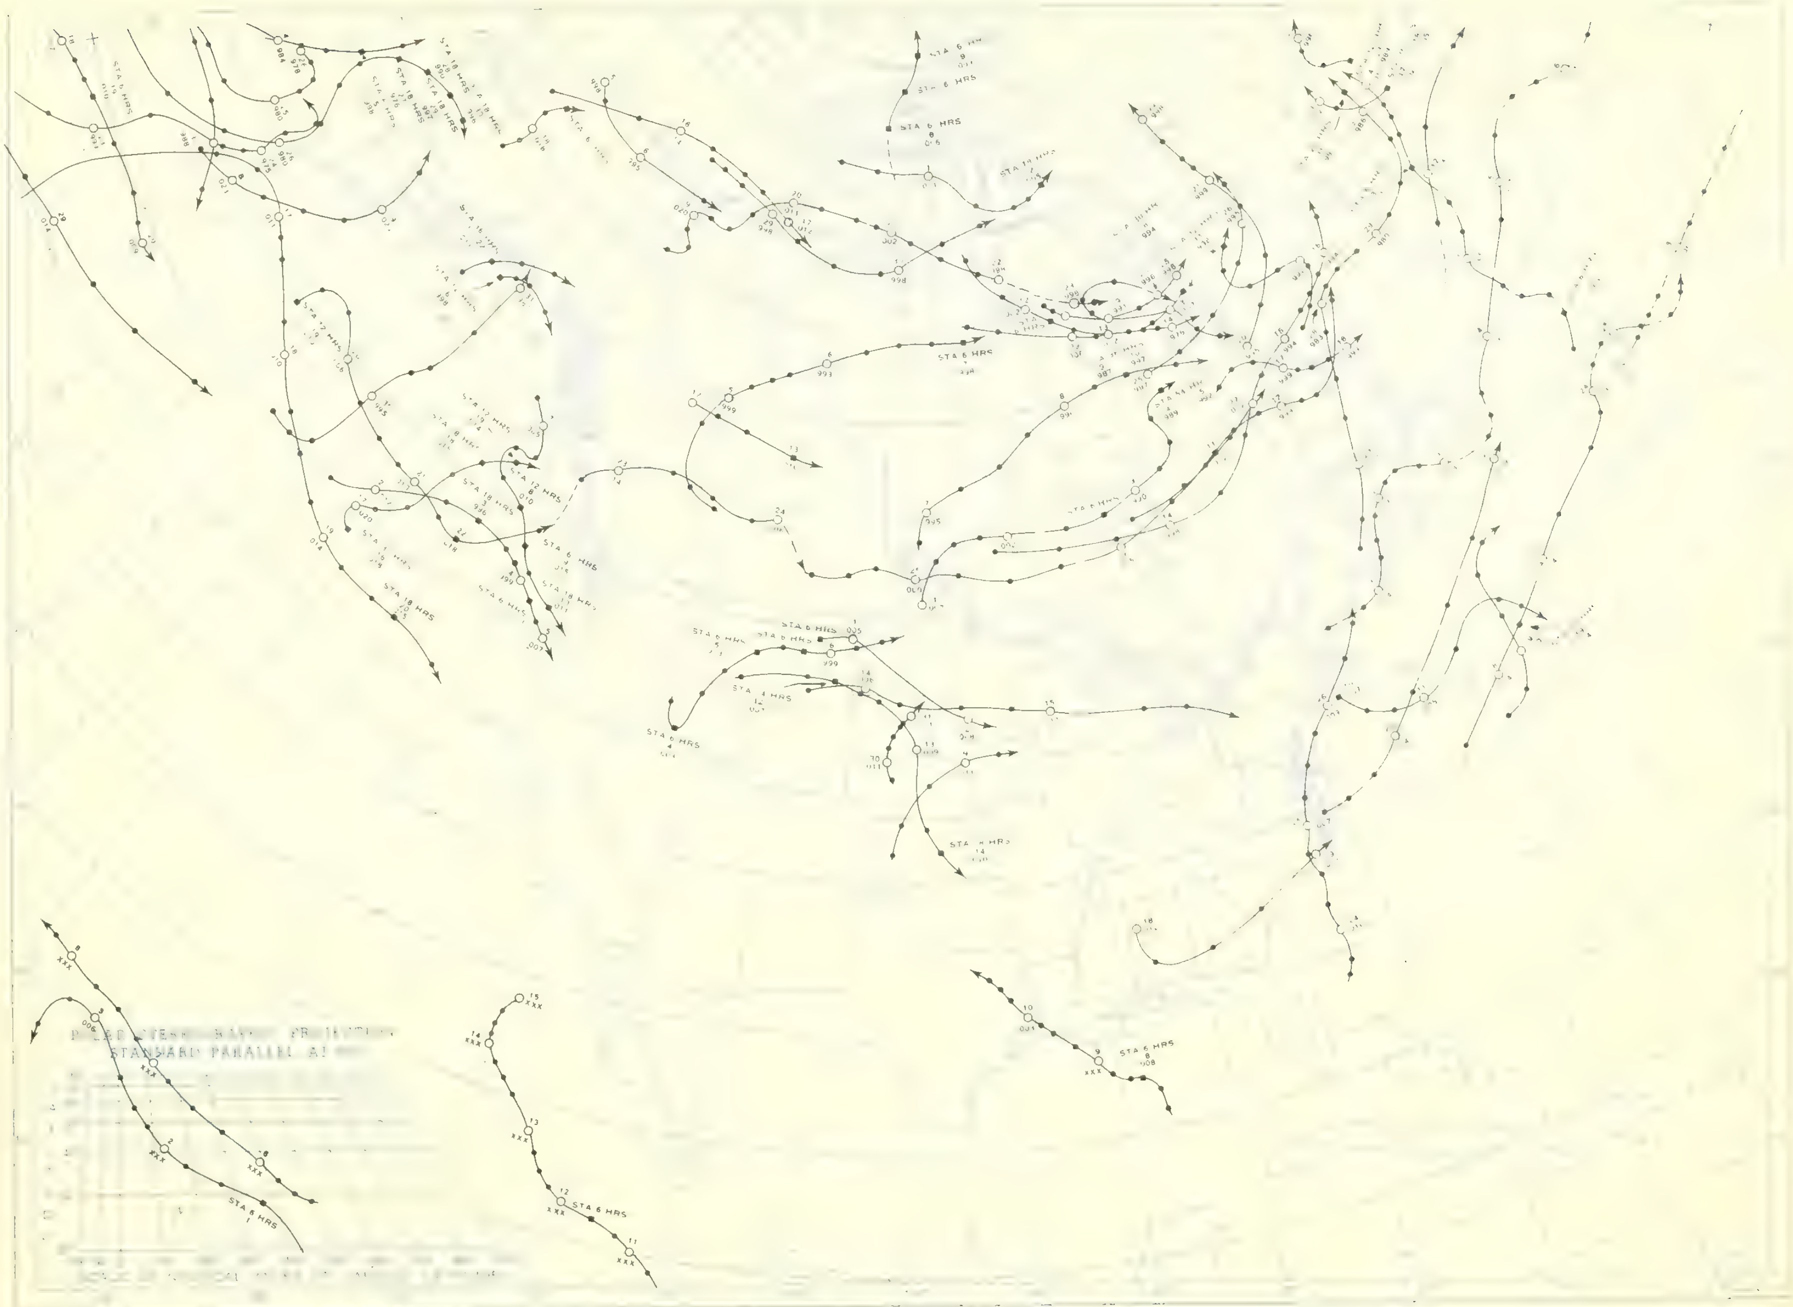
Chart IX. Tracks of Centers of Anticyclones at Sea Level, August 1957.



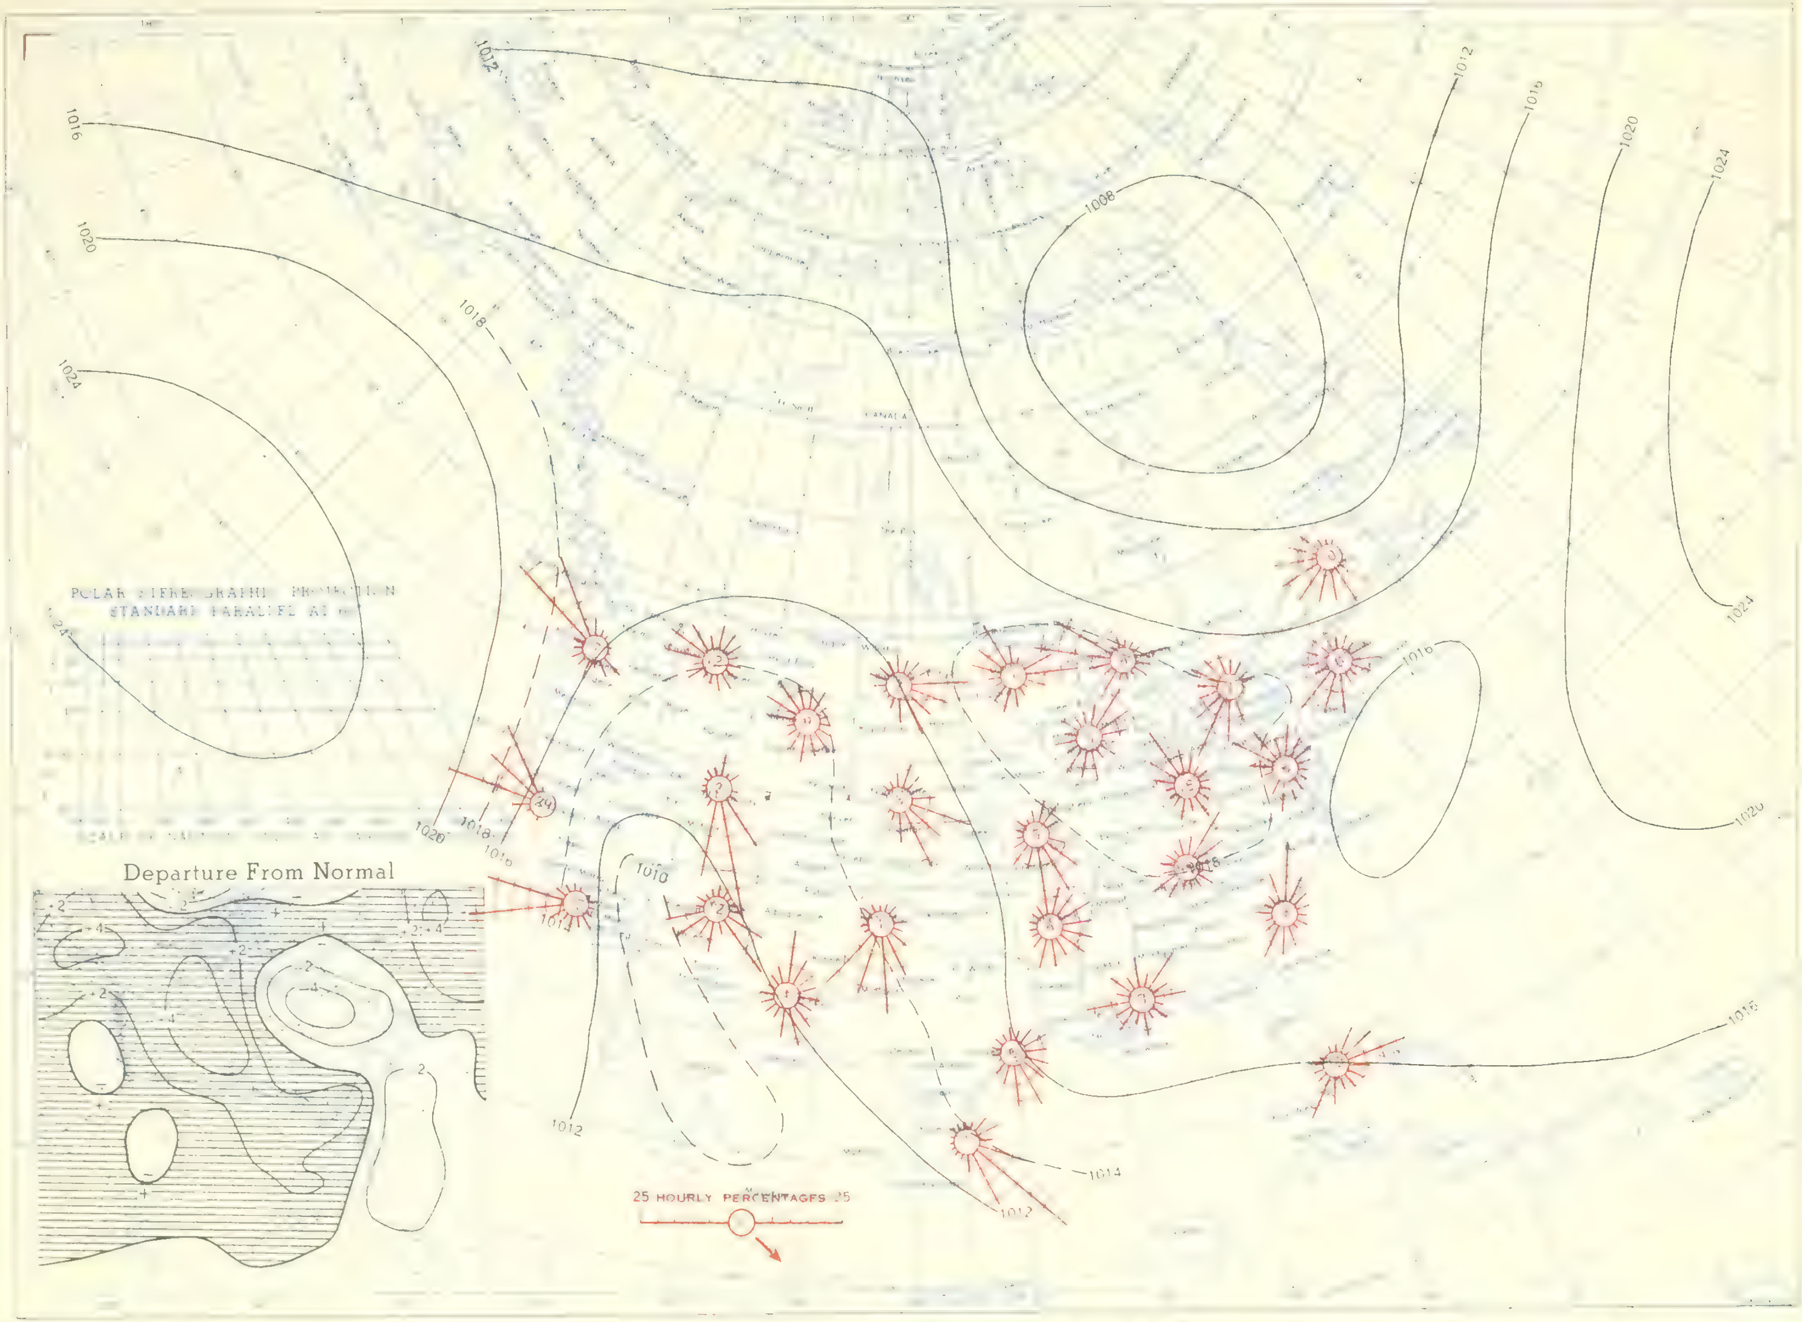
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, August 1957.



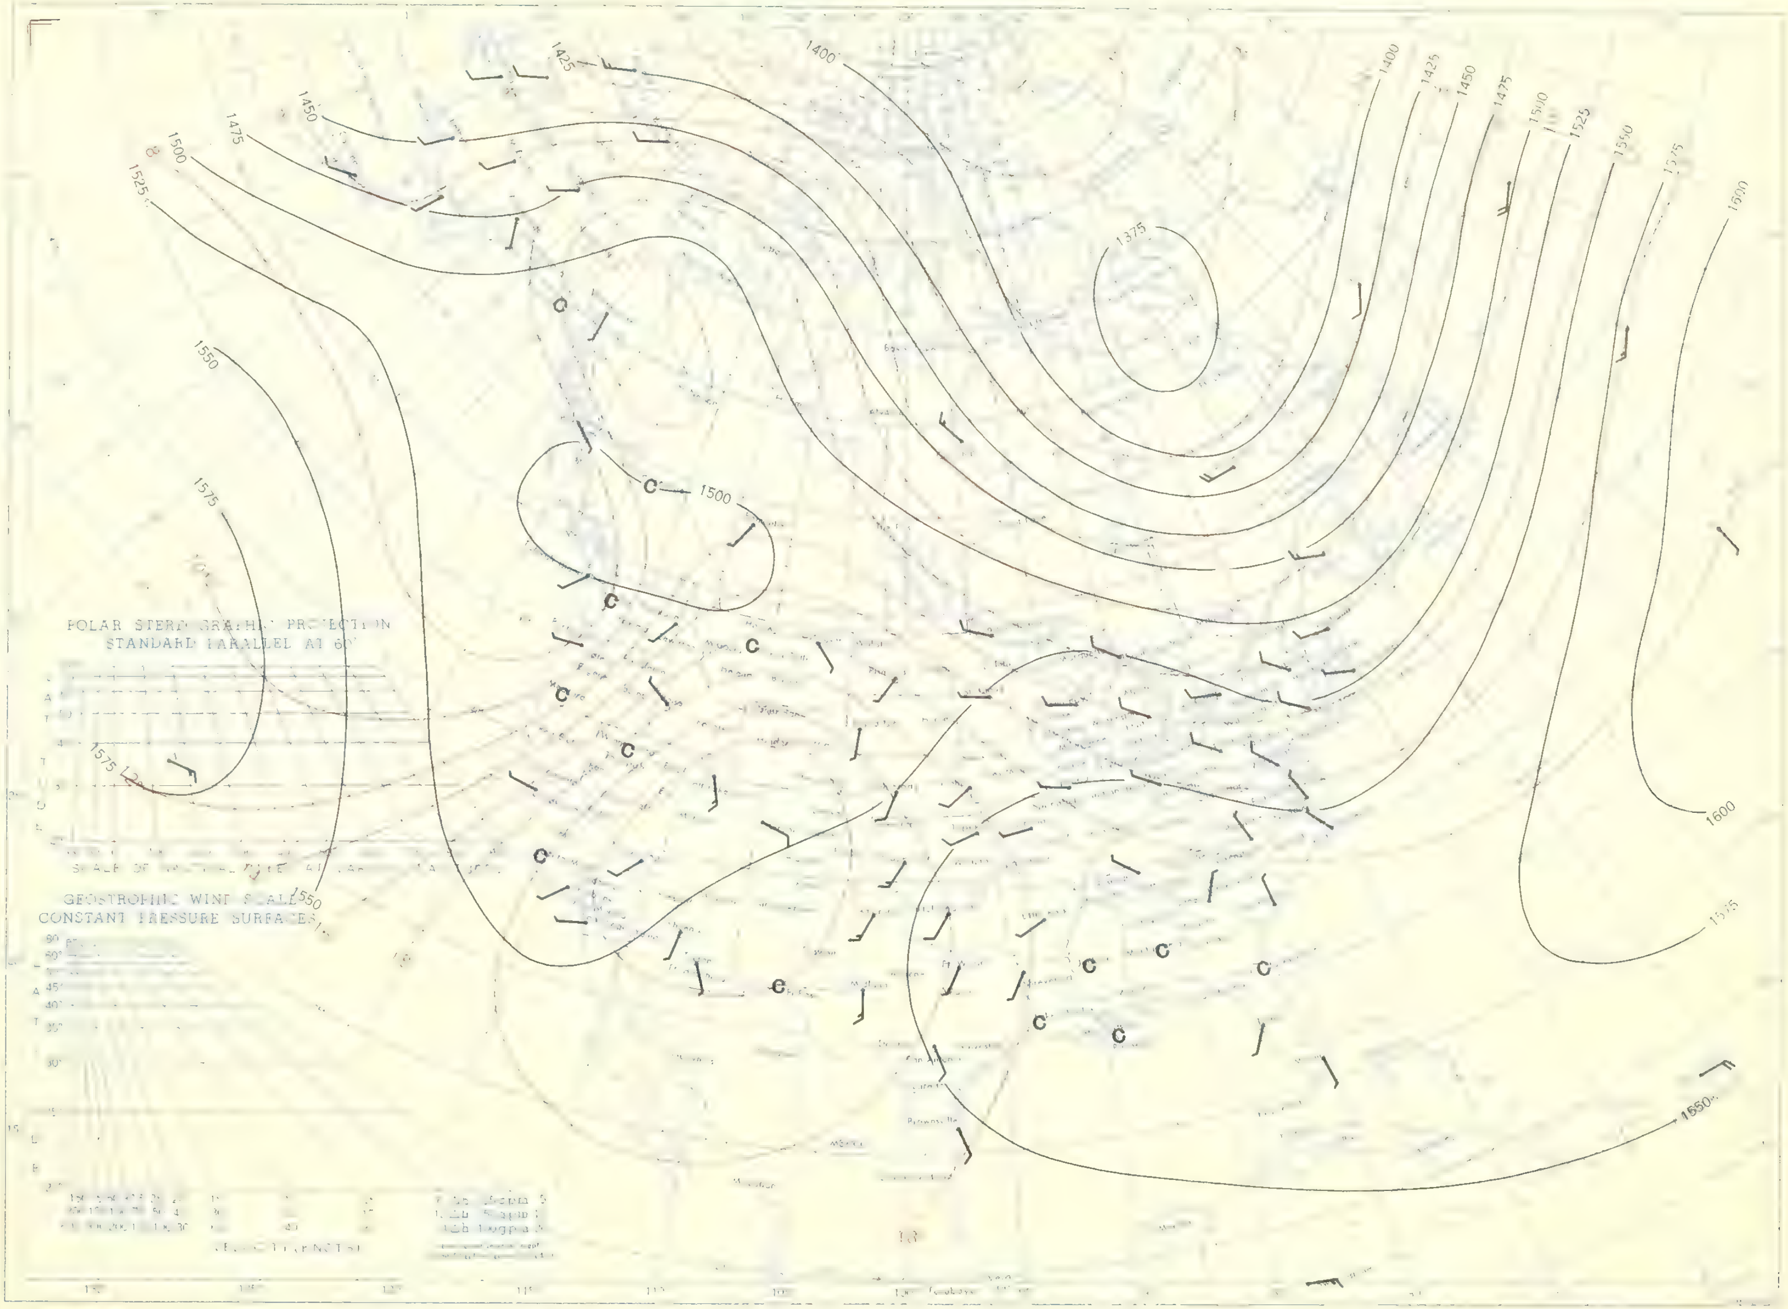
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, August 1957. Inset: Departure of Average Pressure (mb.) from Normal, August 1957.



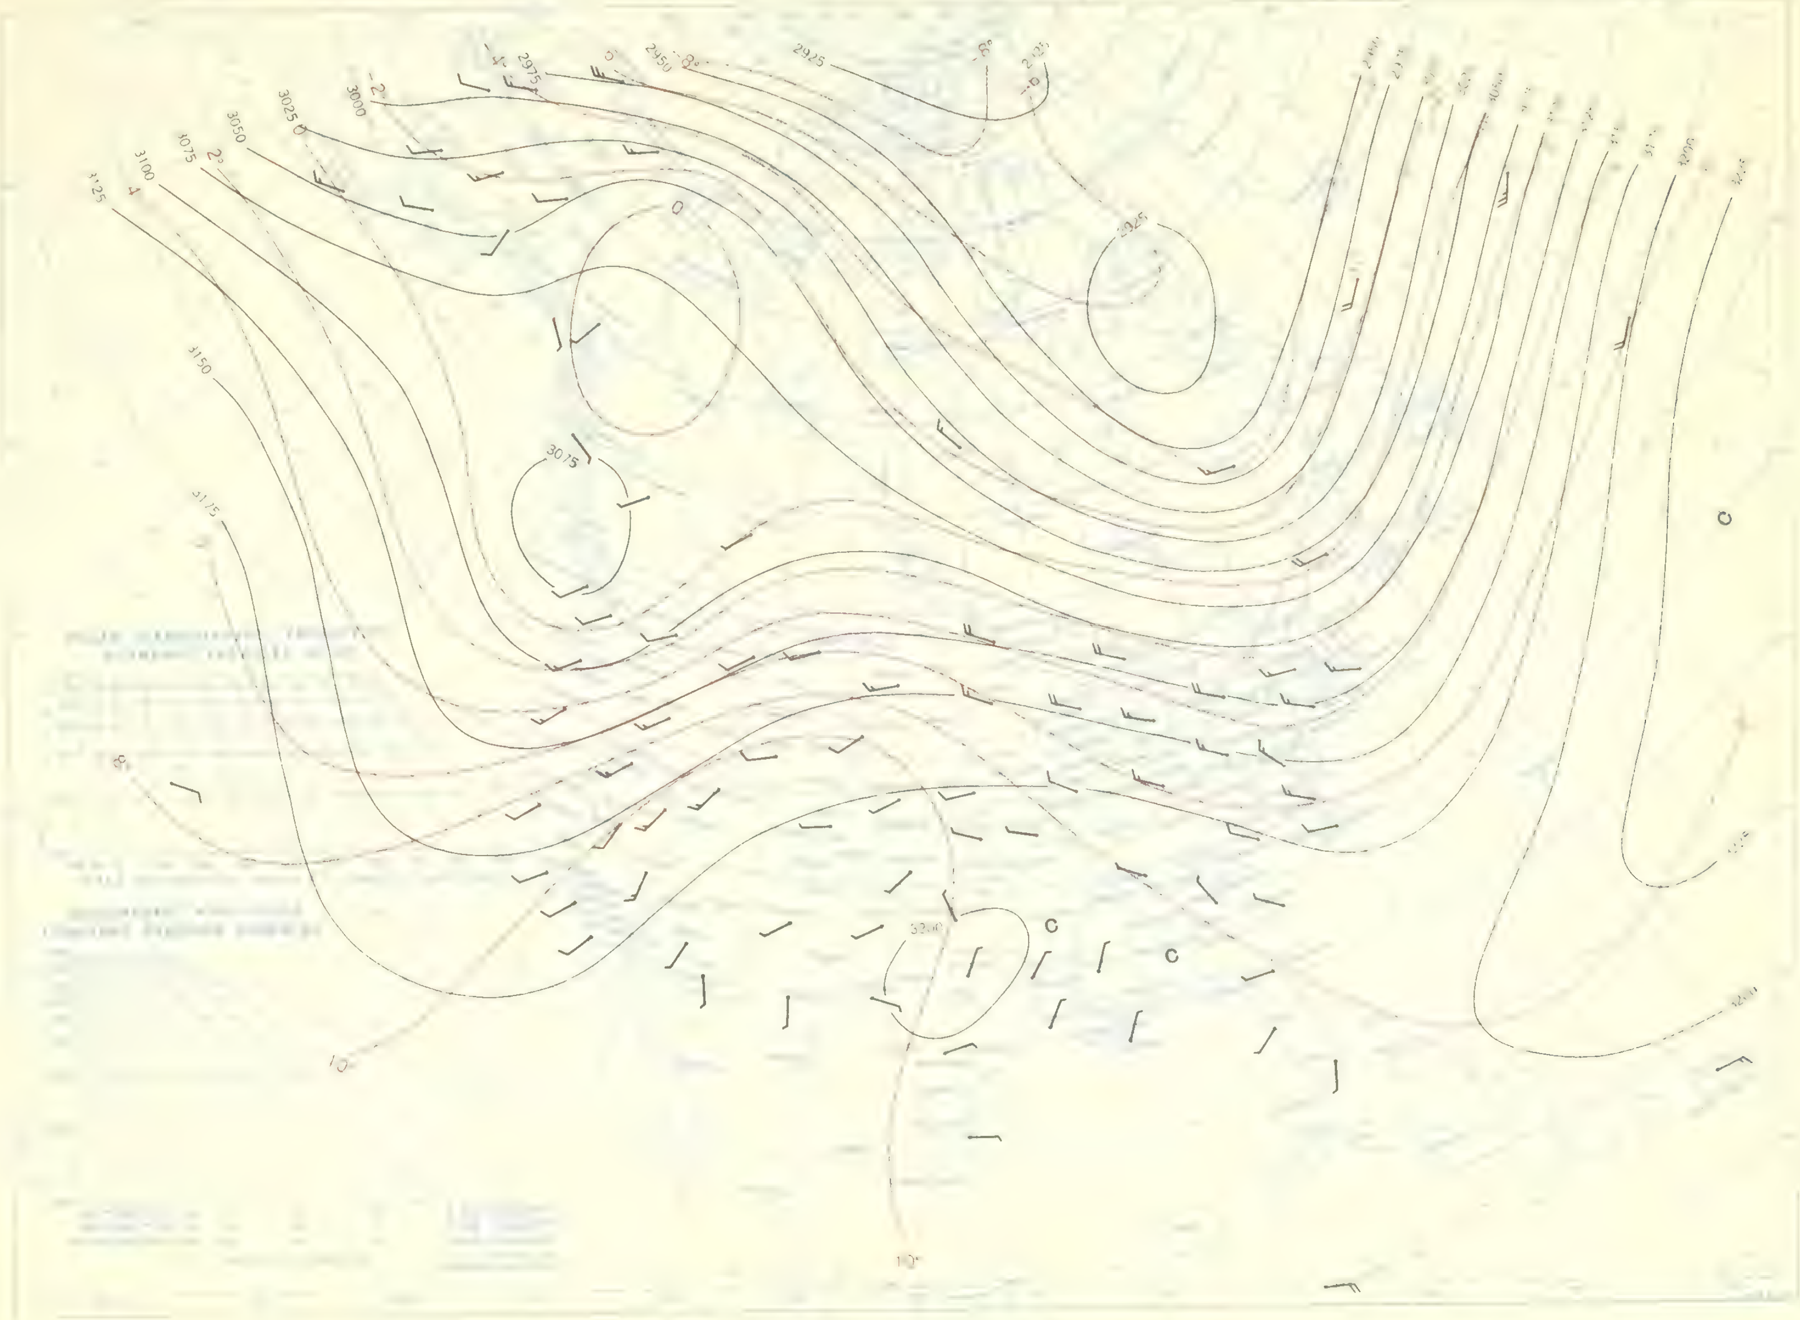
Average sea level pressures are obtained from the averages of the 7:00 a. m. and 7:00 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



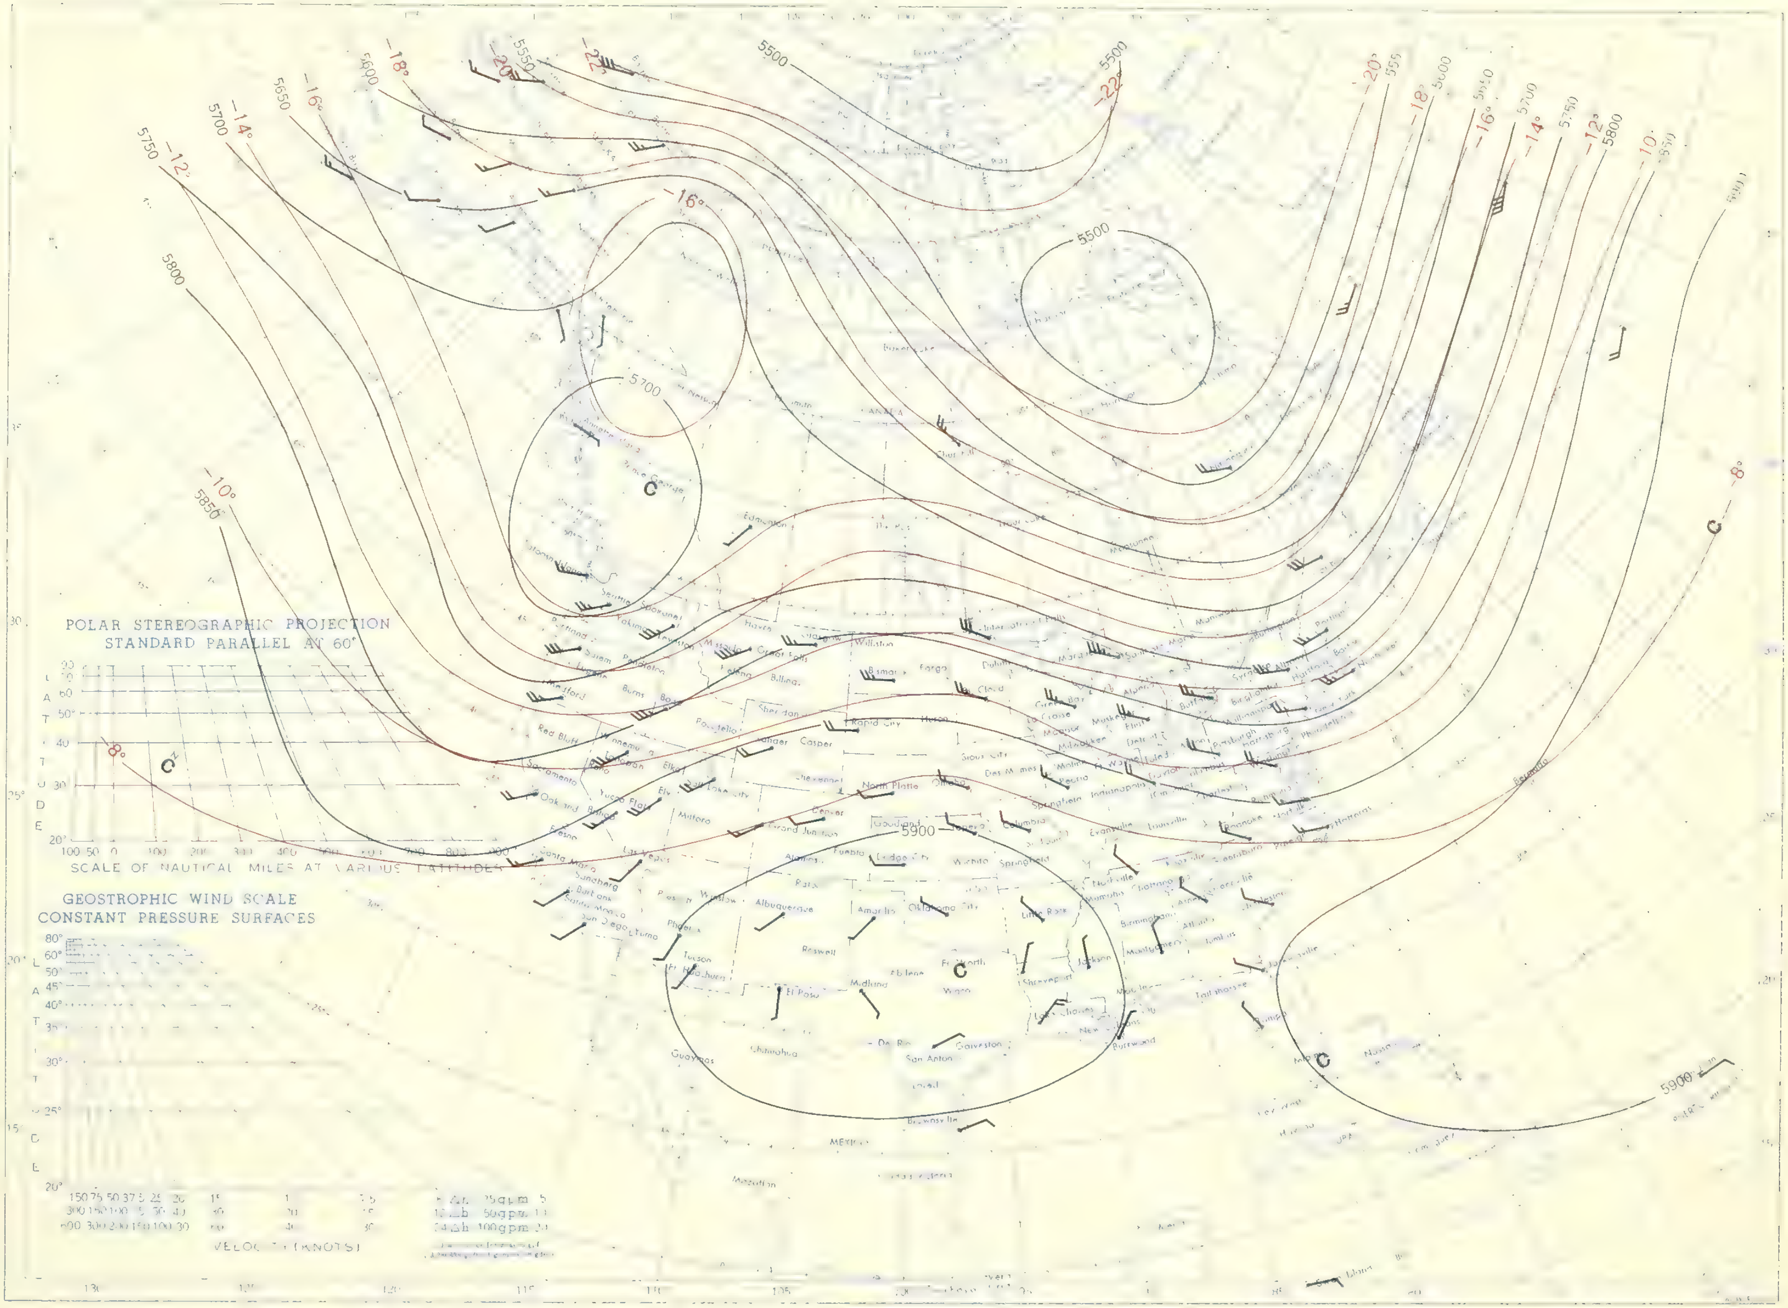
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



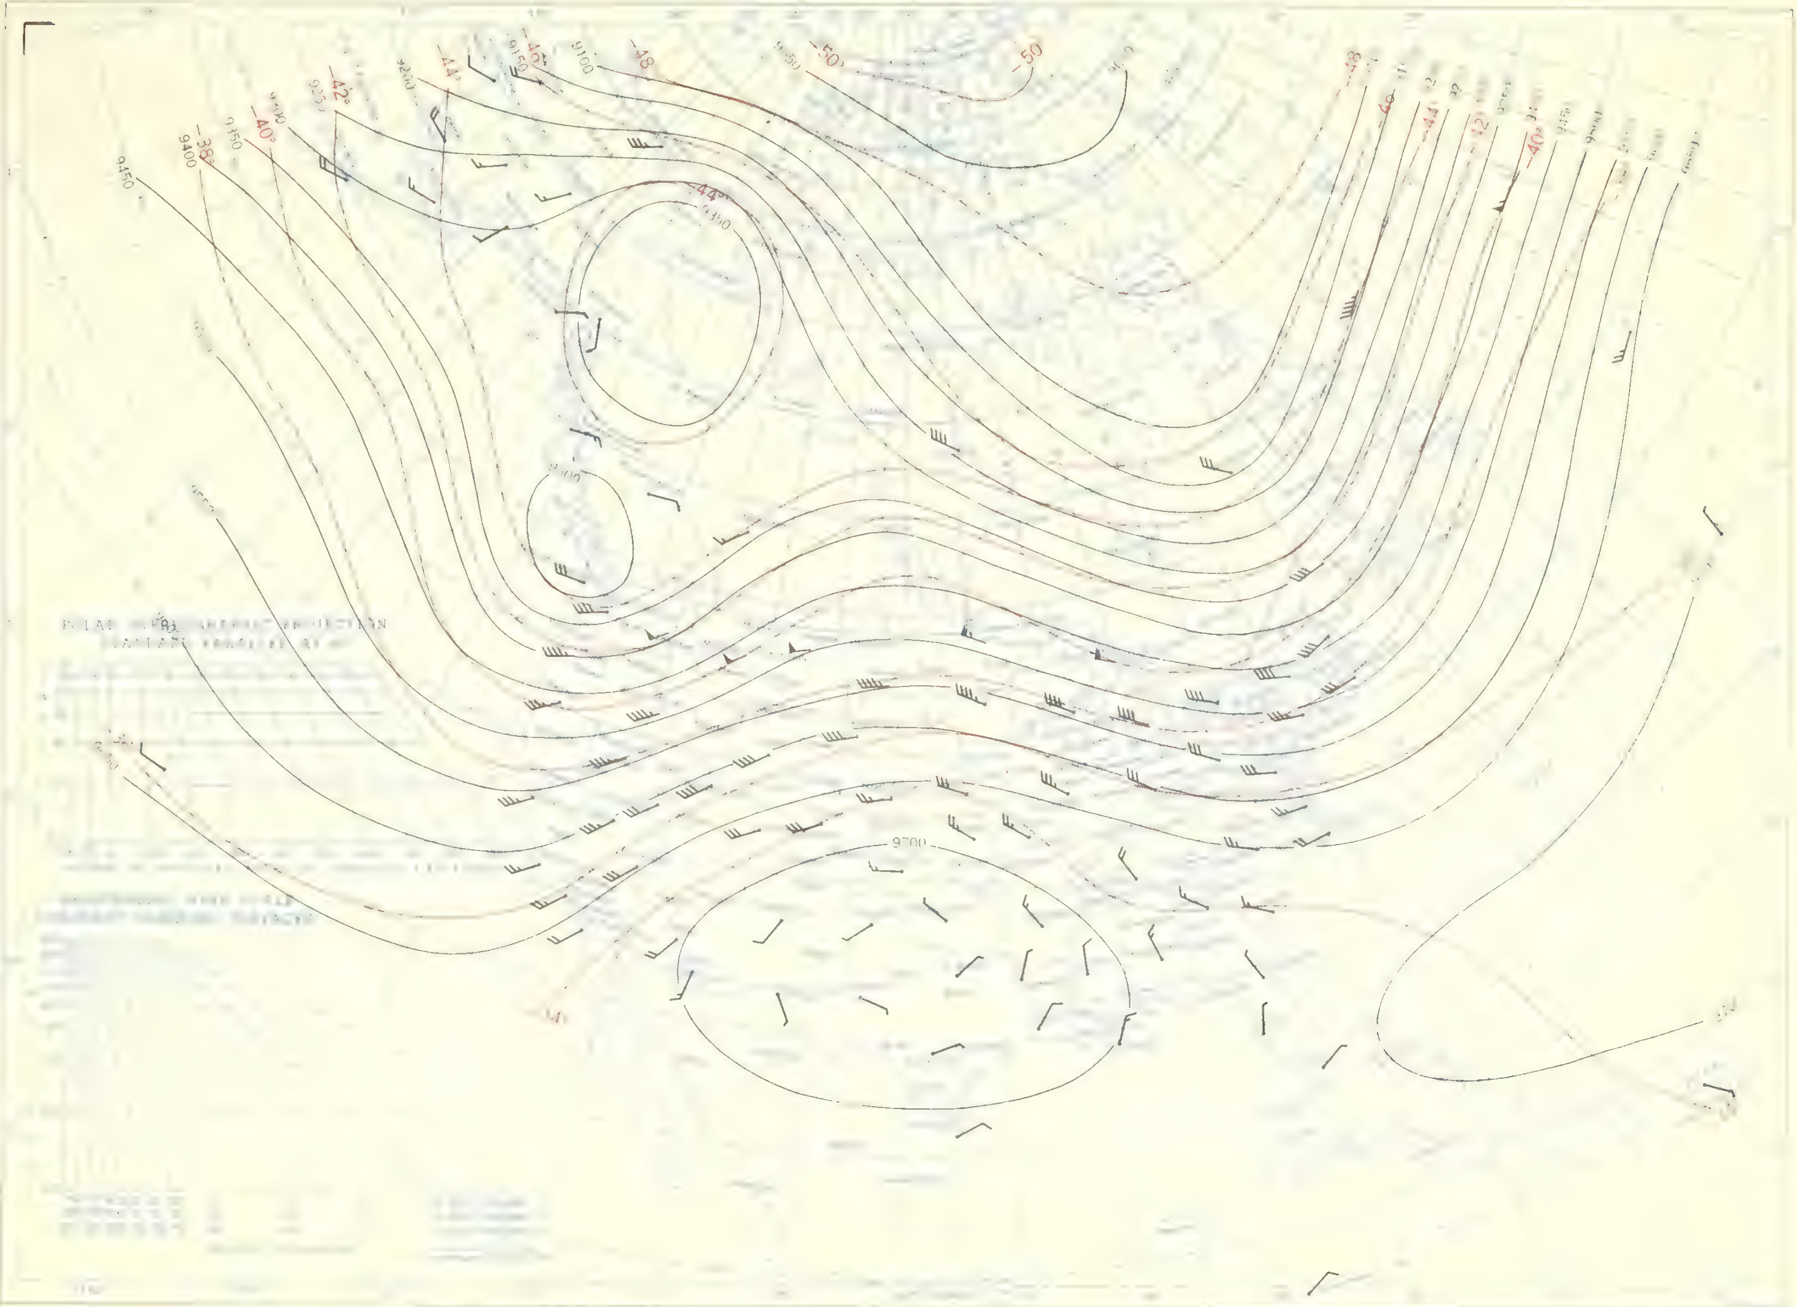
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



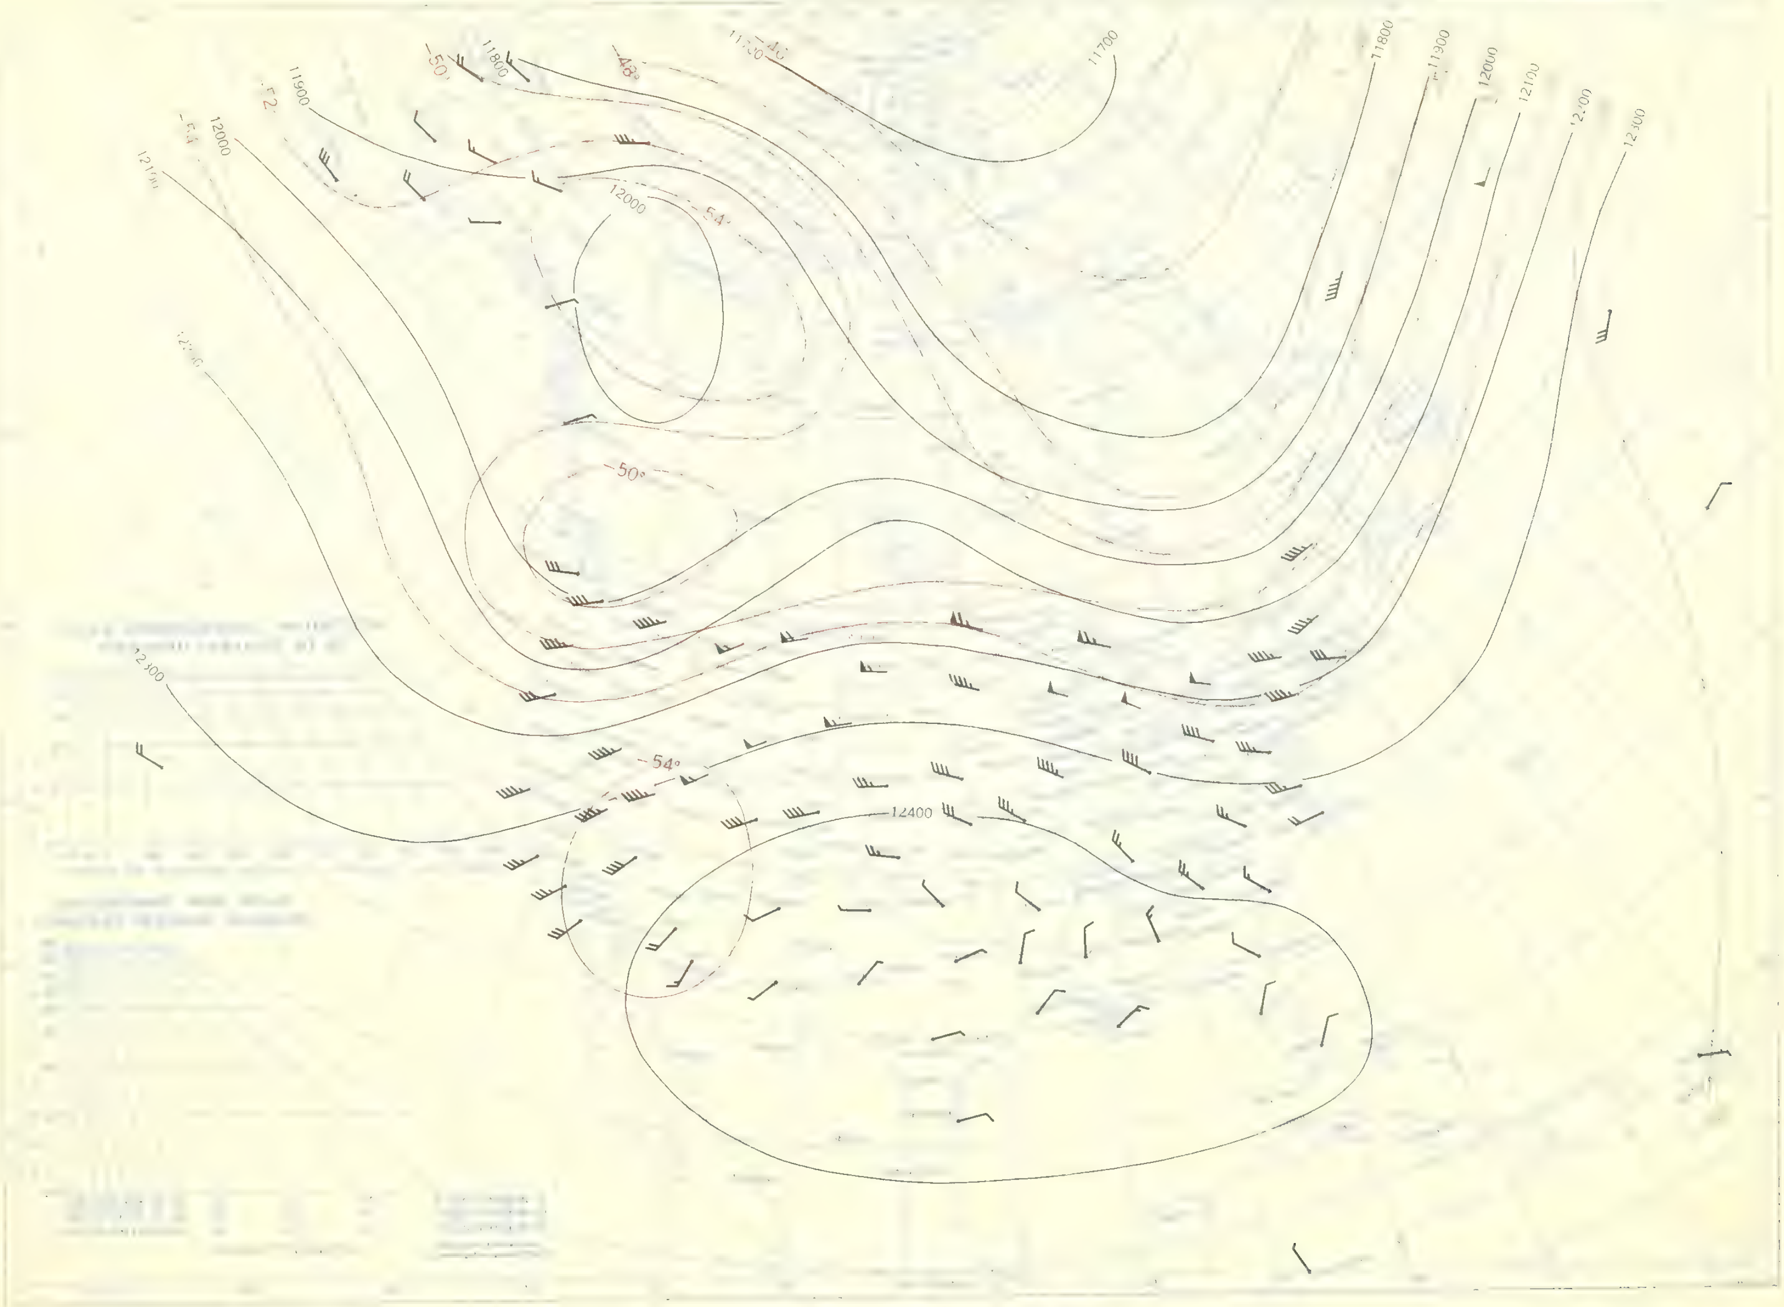
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



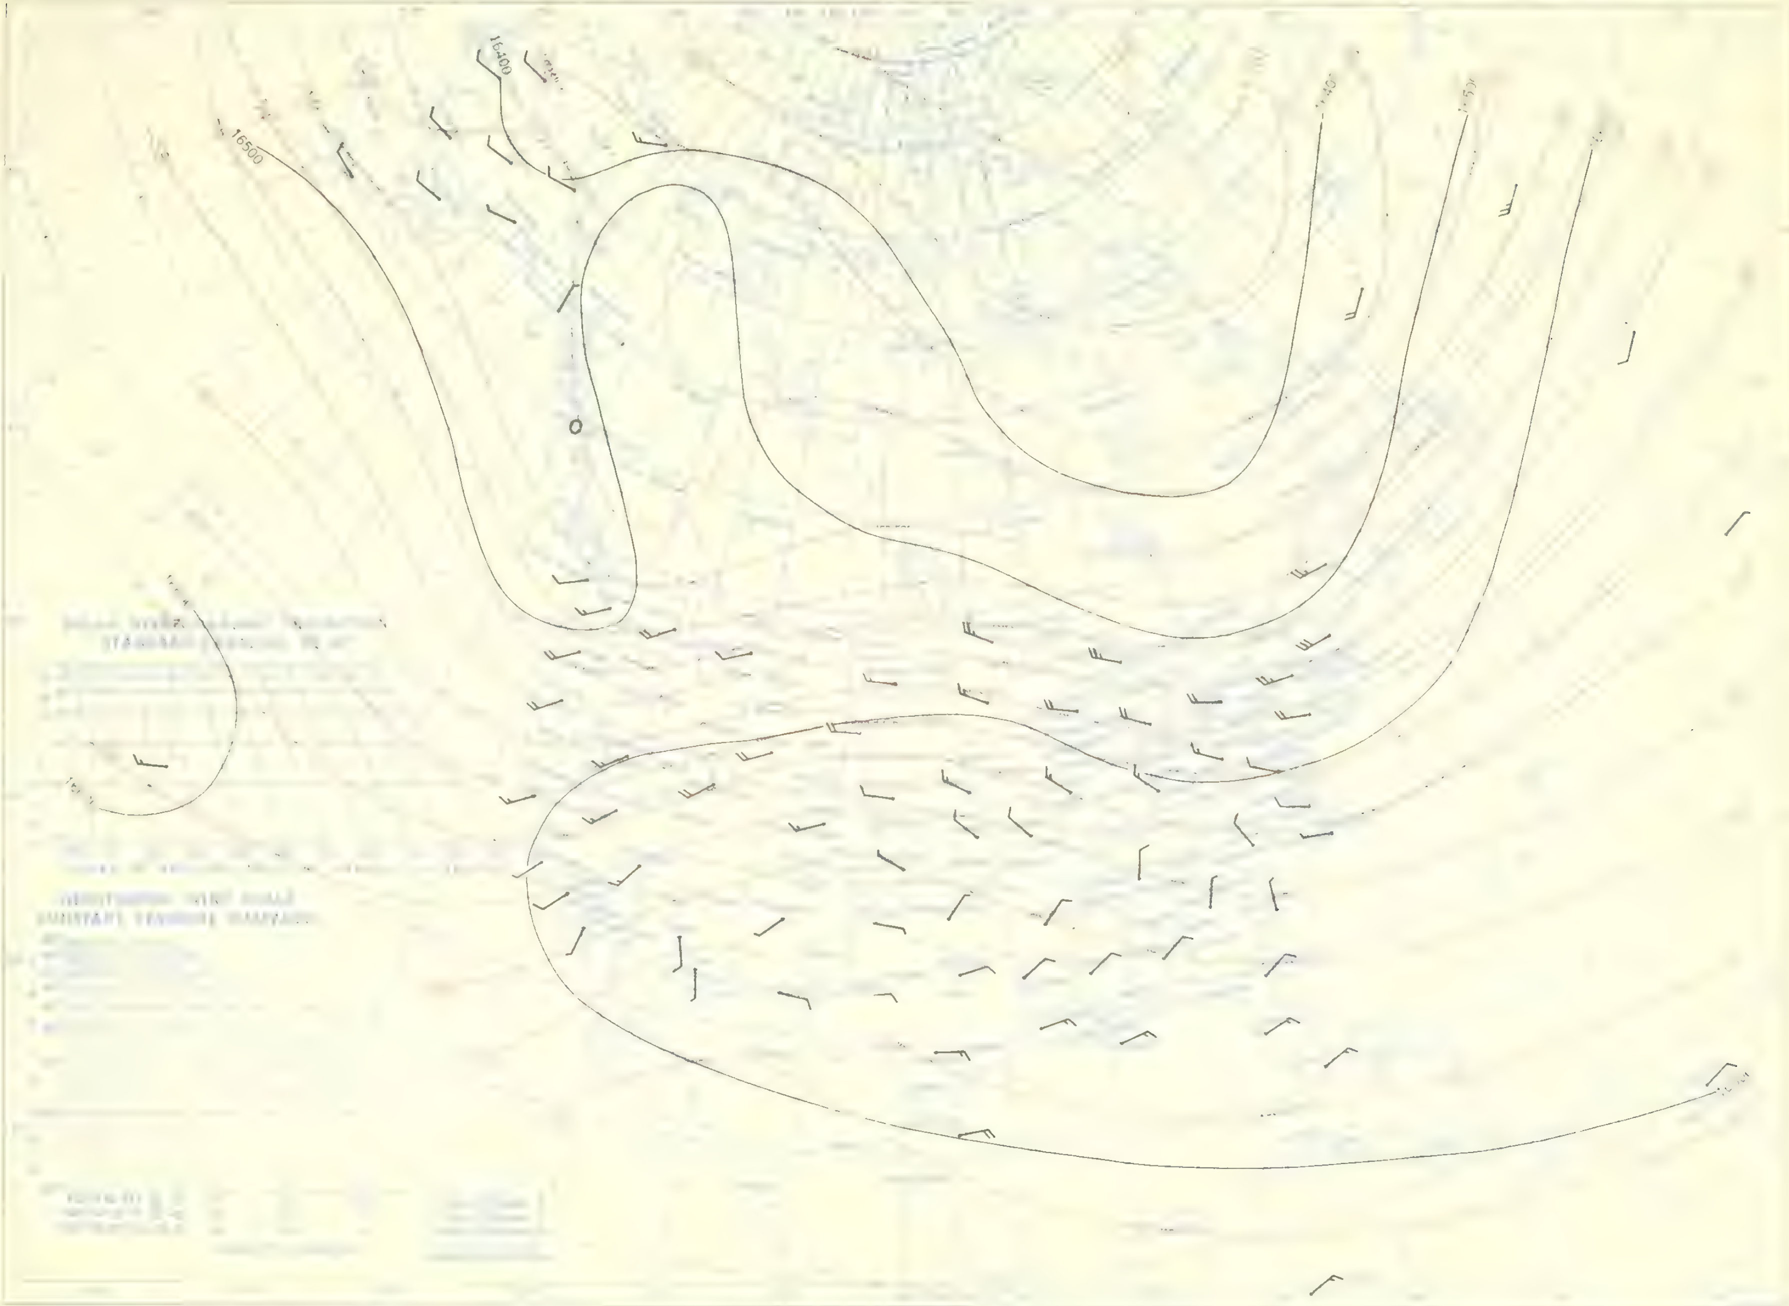
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



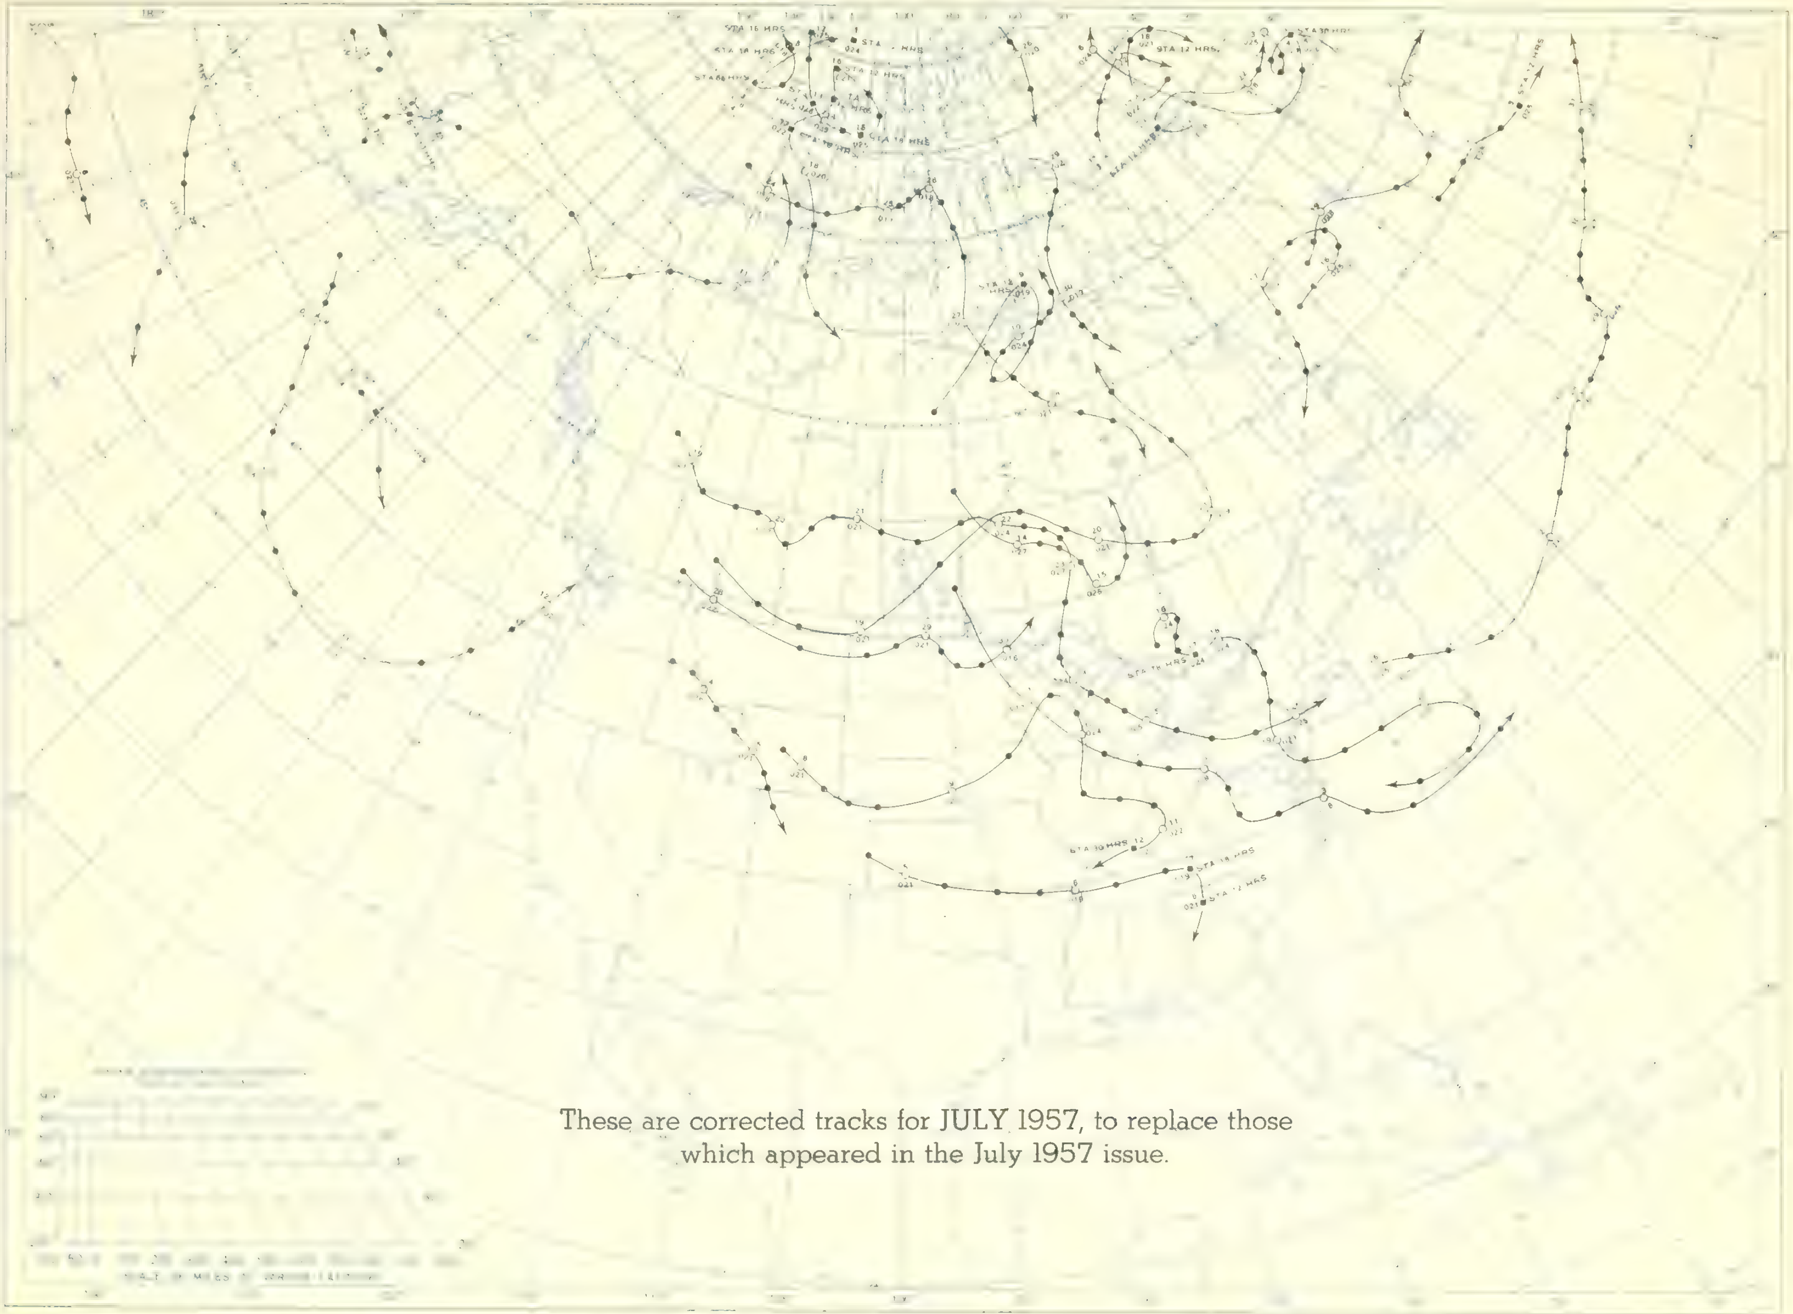
See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, August 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

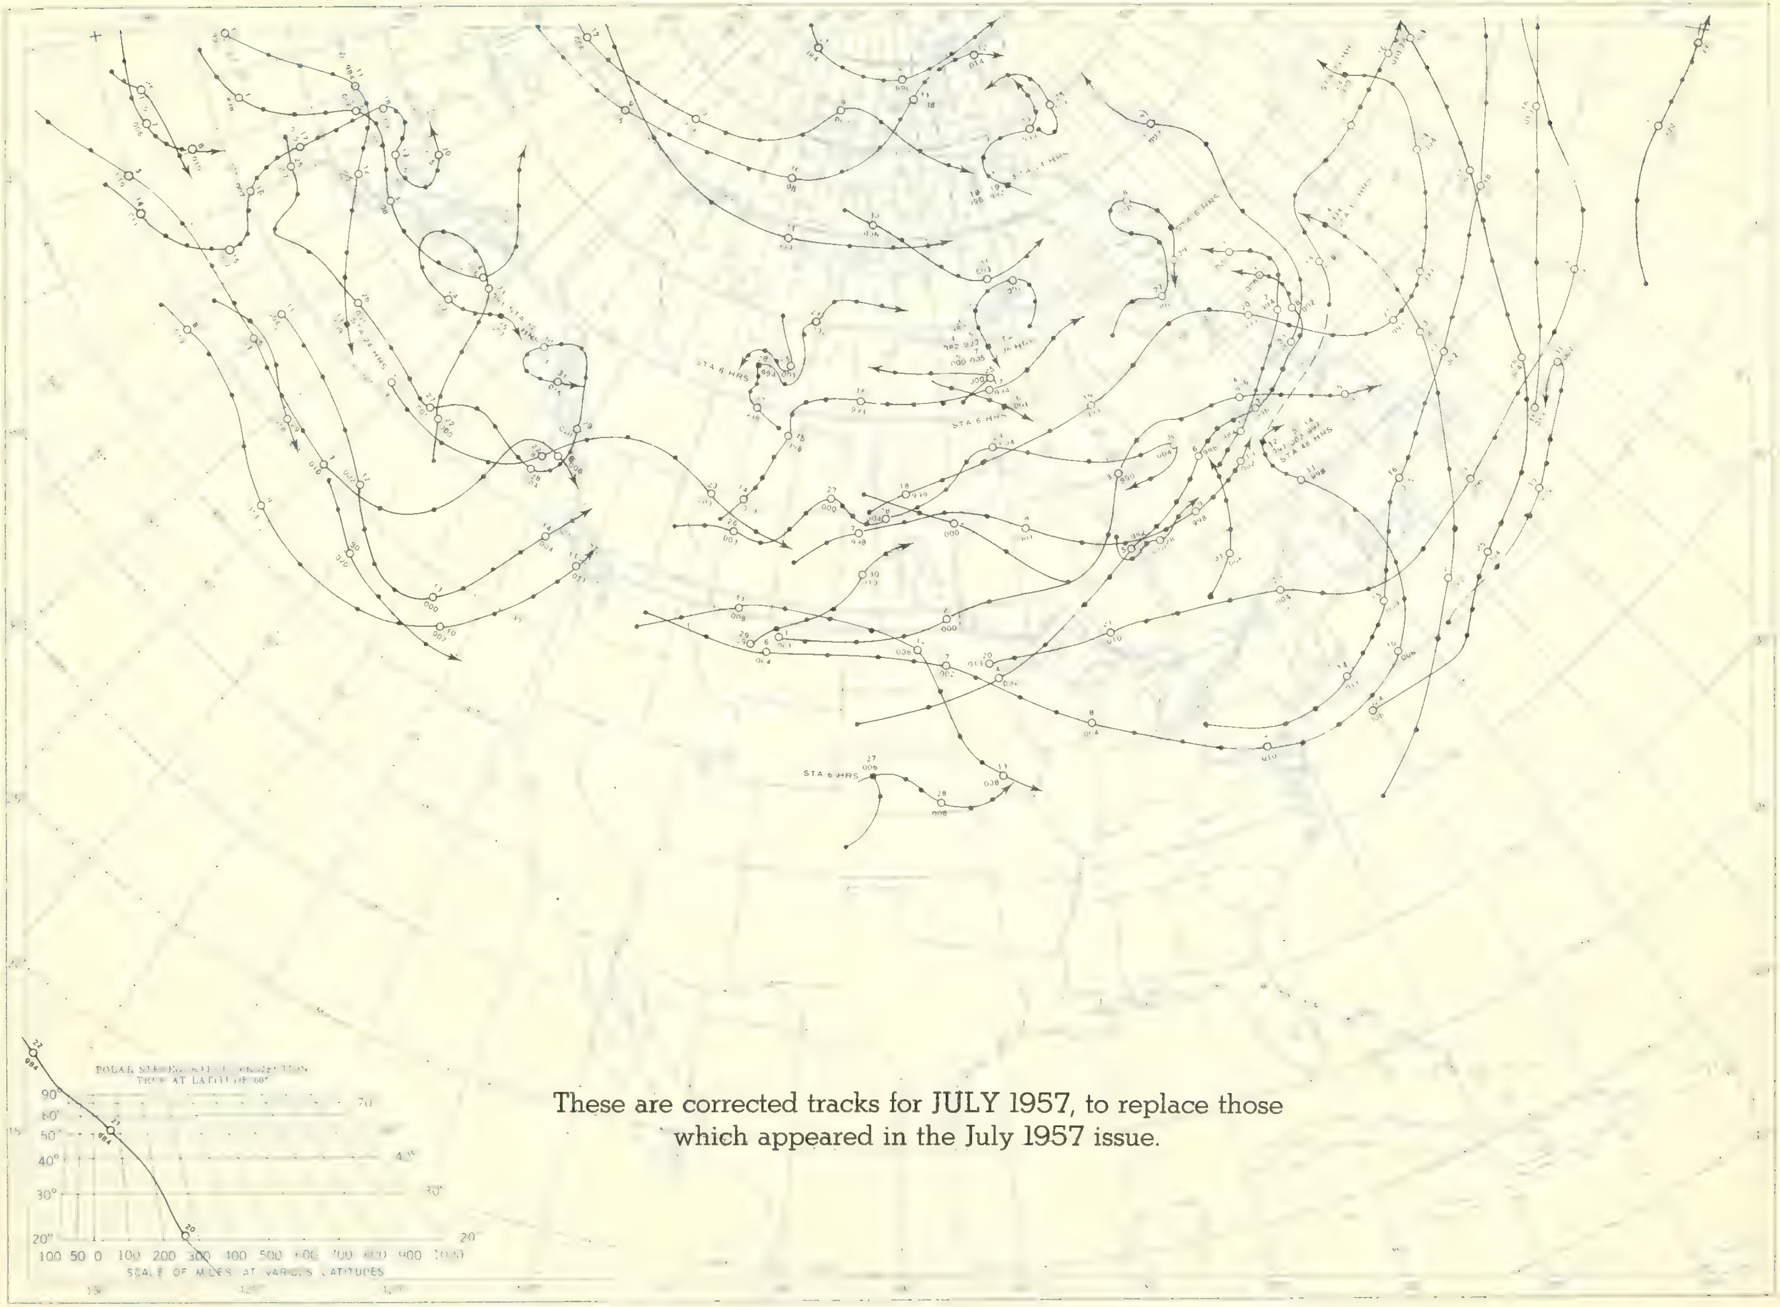
Chart IX. Tracks of Centers of Anticyclones at Sea Level, July 1957.



These are corrected tracks for JULY 1957, to replace those which appeared in the July 1957 issue.

Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, July 1957.



POLAR STEREOGRAPHIC PROJECTION
TRUE AT LATITUDE 60°
SCALE OF MILES AT VARIOUS LATITUDES
STA 6 HRS
STA 24 HRS
STA 48 HRS

These are corrected tracks for JULY 1957, to replace those which appeared in the July 1957 issue.

Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 9

SEPTEMBER 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

The month was quite cool in the central Great Plains and unusually warm along the Pacific coast. Elsewhere, departures of the monthly averages from normal were within the usual range for September. Freezing in northern areas was about on schedule and crop damage, although heavy in a few scattered areas, was not serious. Unusually heavy precipitation furnished beneficial moisture to most of northern California, the eastern Great Plains, and South, but caused some crop and flood damage in southeastern Texas. Elsewhere dry weather favored harvesting operations and continued the drought in southern New England. Unusually heavy snowfall for so early in the season occurred in the northern rockies on the 19th.

TEMPERATURE.--Between the Continental Divide and the Appalachians temperatures remained below seasonable levels almost all month and averaged as much as 4° below normal. The reverse was true along the Pacific coast where temperatures were persistently above seasonable levels and averaged as much as 4° above normal for the month. A monthly average of 68.9° at Portland, Oreg., was the highest there in 55 years.

In the East, temperatures generally remained slightly above normal during the first 3 weeks with daily maxima generally in the 70's and 80's; however, along the coast maxima in the 90's extended northward to New York City on the 3d and to southern New England on the 13th when Boston's 93° set a new record there for the date. Abnormally cool weather prevailed everywhere east of the Great Plains the last week, averaging as much as 10° below normal at some stations.

The last week was unusually warm for the season in the Rocky Mountain States, with weekly averages ranging up to 10° above normal. Scattered stations recorded their highest temperatures on record for so late in the season, including Missoula, Mont., 89° on the 27th, Pocatello, Idaho, 90° and Grand Junction, Colo., 88°, both on the 30th.

The last week was unusually cool throughout the eastern half of the country, thus ending a long period of rather hot, humid weather which had prevailed in the Atlantic coast States during the first 3 weeks. Most stations in the East recorded their lowest temperatures of the month during this period and freezing occurred in the Canadian Border States except along the coast and in the Appalachians as far south as western Virginia. At Rochester, N. Y., a low of 31° on the 27th was the lowest ever recorded there so early in the season.

PRECIPITATION.--Precipitation was less than 50 percent of normal in southern New England, Illinois, and nearby areas of adjacent states, extreme eastern Montana, the Far Southwest, much of the Great Basin, and most of extreme western and northern Washington State. In contrast, monthly totals exceeded 200 percent of normal in northern California and most of the eastern Great Plains and Southern States.

In southern New England, rainfall was generally less than 0.50 inch in extreme eastern portions and from 1.00 to 2.50 inches in central and western portions, bringing only slight relief from the prolonged dry spell in that area. In some eastern parts of this area the periods January through September and June through September were the driest of record. A total of 17.71 inches at Providence, R. I., for the period January through September was the least amount there for that period since the earliest records in 1832. With virtually no rain during the last week forest fire danger again became very high in eastern and central Massachusetts and southern parts of northern New England where many woods and brush fires continued to break out. In southern New Hampshire streamflow and ground water levels were unusually low and many wells dry. Soil moisture was short in nearly all sections of southern New England and pastures were declining rapidly at the end of the month. However, the dry, sunny weather favored harvesting operations.

In other sections of the country where September rainfall was deficient the shortage was not serious due to rains of previous months, although fall-seeded grains in some southwestern sections needed more moisture for best growth.

Heavy rainfall in the South ranged up to 400 percent of normal in parts of Mississippi and Alabama, and monthly totals exceeded 20 inches at some stations. Stations reporting record totals for September included Montgomery, Ala., 9.55 inches; Tallahassee, Fla., 20.32; and Chattanooga, Tenn., 12.19 inches. This heavy rainfall was well distributed through the month, with heavy amounts falling during each week. Tropical storm Debbie dumped heavy rains in northwestern Florida and other southeastern areas on the 7th. Crawford, Fla., measured a 9-inch total for this storm, and 2 to 4 inches were common in southern portions of Alabama, Georgia, and South Carolina. Another tropical storm, Esther, was responsible for torrential rains with falls exceeding 5 inches at many locations from southeastern Louisiana to northeastern Florida on the 18th and 19th.

California's heavy rainfall all occurred during the last week from San Francisco and Sacramento northward. At San Francisco, 1.15 inches fell on the 28th, greatest daily amount for so early in the season since 1918; Mt. Shasta had 4.85 inches and Crescent City 4.17, also early season records. These rains caused minor damage to prunes, grapes, tomatoes, and hay in the northern portion but benefited ranges and ended the fire hazard.

DESTRUCTIVE STORMS.--Numerous severe local storms occurred east of the Rocky Mountains during the first week as an area of low pressure with a trailing cold front moved eastward from the Great Plains. Hail, wind, and rain were responsible for damage of several hundred thousand dollars to crops in the northern Great Plains and upper Mississippi Valley on the 1st. Hail caused $100,000 damage or more to crops in Gaines County, Texas, on the 3d, Dundy County, Nebraska, on the 4th, and Hall and Childress Counties, Texas, on the 6th. Hail and wind combined damaged

SEPTEMBER 1957

crops to the extent of about $200,000 in Brown County, Kansas, on the 5th.

Frontal passages through the lower Great Plains again during the period September 10-14 triggered off numerous other storms of wind, rain, and hail which caused damage, mostly to crops, of a few million dollars in Texas and several hundred thousand in New Mexico and Oklahoma.

On the 18th and 19th heavy snowfall in Helena, Mont., and vicinity was responsible for a few thousand dollars damage. In Helena 13.4 inches of snow fell in 24 hours and a maximum depth of 9 inches was recorded, both new records there for September.

Crop damage from heavy rainfall occurred in southern Louisiana and Mississippi on the 18th and 19th when tropical storm Esther moved into the area from the Gulf of Mexico.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WYOMING Worland (2 miles south of), Washakie County	1	10 a.m.	4-1/2	*2			1	4	Hail and wind	Storm moved northeastward.
VIRGINIA Tasley area, Accomack County	1	A.m.					4		Electrical, wind, and rain	Electrical storm accompanied by high winds and some rain. 2-story house burned. Wind damage to utility lines and buildings.
PENNSYLVANIA Central City, Somerset County	1	Daytime					4	1	Electrical	Lightning destroyed a hoist house of local coal company.
SOUTH DAKOTA Statewide	1	1-6 p.m.				3	4	5	Hail, wind, and rain	Hail areas widely scattered, mostly in north-central and southeast. Near Howes, gardens and pastures ruined. Buildings and crops damaged near Timber Lake. Rancher and child pelted by stones up to 2 inches in diameter, when caught in open. Young boy had arm broken while trying to escape storm on horseback. South of Firesteel, wind unroofed house and contents ruined by heavy rain. Trees stripped by hail which accumulated to 1-1/2 feet. Southeast of Glencross, stones chiseled wood as well as paint from buildings. Stones 1-1/2 inches across fell at Mobridge. At Pollock, roads and a bridge washed out by heavy rain. In southeast, hail reported from Vermillion to Dell Rapids, with a few stones reaching baseball size.
MASSACHUSETTS Petersham, Worcester County	1	3:40 p.m.			0	0	1	1	Dust devil	Dust devil struck large, open-air tent. Lifted tarpaulin into air with stakes, cables, and ropes flying about. None of a dozen women and children sitting on benches injured.
SOUTH DAKOTA Elkton (northwest of), Brookings County	1	Afternoon			0	0			Funnel aloft and thunderstorm	Sighted during thunderstorm.
NEW HAMPSHIRE Nashua, Hillsboro County	1	Late afternoon			0	0	2	1	Dust devil	Dust devil lifted asbestos slates from shed and carried them 60 feet to house roof. Twister funnel shaped and was carrying papers, sticks, wood, etc., when it struck. Moved southeastward.
NEBRASKA Lincoln, Lancaster County	1	5:30-6 p.m.			0	0	3	2	Wind, hail, and funnel aloft	Many TV antennas downed. Some hail damage to gardens. Funnel cloud reported. Storm moved northeastward.
SOUTH DAKOTA Spink and Brown Counties	1	5:30-7 p.m.	35		0	0	1	1	Tornado and funnels aloft	Sighted touching ground in field east of Mellette. Raised as it approached farm buildings. Straw from field could be seen around fringe of funnel. Last sighted aloft 20 miles east of Aberdeen accompanied by other funnels; moved northeastward.
NEBRASKA Valley (north of), Douglas County	1	6-6:20 p.m.			0	0	3	2	Wind and tornado (suspected)	
WISCONSIN St. Croix Falls, Polk County	1	6:30 p.m.					5	1	Rain	6.2 inches of rainfall in 7 hours.
	1									Minor storms also reported in southwestern Iowa; at St. Charles, Mo.; near Fremont, Leigh, and Loup City, Nebr.; and in Cleveland County, N.C.
NORTH DAKOTA Eastern fourth	1,2,3								Rain	Heavy rain on September 1, 2, and 3 following some late August heavy rains, flooded fields of potatoes, beets, and cut grain, causing much damage. Many basements in larger towns and cities, both residence and business flooded. At Gwinner, Sargent County, unofficial reports of 7-1/2 inches of rain received with 5 inches in a 2-hour period.
MICHIGAN Kinde, Huron County	2	Midnight-3 a.m.					4		Electrical	2 buildings burned after lightning strike.
NORTH CAROLINA Stanly County	2	2:30 p.m.					4		Electrical	Lightning fire destroyed office and warehouse.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

SEPTEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Marlow, Stephens County	2	2:30 p.m.	2						Wind, rain, and hail	Strong winds blew small home off its foundation and destroyed small outbuilding. 15 telephone poles blown over. Winds and heavy rain broke tree limbs and flattened crops. Estimated damage to the buildings $100.
VIRGINIA Roanoke area, Roanoke County	2	3 p.m.					3	3	Wind, electrical, and rain	High winds, 60 m.p.h., or more, accompanied by considerable lightning. 3 homes struck by lightning. Trees, buildings, and utility lines damaged by rain. Storm moved northeastward.
OKLAHOMA Duke, Jackson County	2	4 p.m.				1			Wind, rain, hail, dust, and electrical	Severe winds lashed area, causing extensive damage and destruction to outbuildings and TV antennas; trees broken off, and crops flattened. Woman injured when wind slammed storm-cellar door against her. Considerable dust blew in ahead of storm. Storm moved southward.
NEW YORK Scattered sections	2	Afternoon-evening							Electrical, wind, and hail	Series of severe electrical storms moved through State. Hardest hit sections appear to have been Niagara, Orleans, and Genesee Counties in northwest, Syracuse area, Walkill Valley, and selected communities of southeast. Damage consisted of limbs over power-and communications lines, church struck by lightning in Syracuse, scattered hail damage, and a few injuries to workmen repairing powerline damage.
TEXAS Lockhart (near), Caldwell County	2	9:30 p.m.				1	3		Wind	Strong wind tipped empty trailer which overturned pickup truck. Driver cut and bruised.
TEXAS Marlin (west of), Falls County	2	P.m.			0	0			Funnel aloft	
	2									Minor storms also reported at Cordele, Ga.; at Atlantic, Iowa; at Cass City and Snover, Mich.; in Gaston, N. C.; at Dallas and in Schuylkill County, Pa.; and at Chilton and Mooresville, Tex.
CONNECTICUT Fairfield County	2-3	Late p.m. 2d-early a.m. 3d							Electrical	Storm with considerable lightning concentrated its effects in Stamford-Norwalk area. Bolt struck feeder line on electrified rail line between New Haven and New York City, causing short delays of trains in Cos Cob area. This was second similar occurrence in area within a week. Power failures to 100 users resulted from lightning-downed limb on line in Darien.
TEXAS San Antonio, Bexar County	3	4:30 a.m.					4		Electrical	Lightning set fire to fertilizer plant which was destroyed, including equipment and fertilizer.
TEXAS Seagraves (near), Gaines County	3	4-5 p.m.	11	4,000				5	Hail	Cotton and feed crops damaged over 11-section area. Storm moved southeastward.
TEXAS Nolan (near), Nolan County	3	5:30 p.m.	5	*1-1/2					Hail, rain, and electrical	90 percent of cotton and feed crops destroyed. Storm moved southeastward.
TEXAS Fairview (near) Howard County	3	6 p.m.	3	*3					Hail	Extensive damage to crops.
OKLAHOMA Ponca City, Kay County	3	8:45 p.m.						1	Electrical	Lightning struck home, causing $115 damage to electric circuits. Barn struck, causing fire which destroyed 2 barns, 2 tractors, truck, considerable farm machinery, hay, and grain.
TEXAS Eldorado (near), Schleicher County	3	9:30-10:30 p.m.	3	1,320			4	C	Wind, rain, hail, and electrical	Winds over 75 m.p.h. House demolished; phone and powerline poles blown down; TV antennas damaged. Rain 2.84 inches in 1 hour and accompanying hail damaged crops. Storm moved southward.
VIRGINIA Nottoway, Caroline, Northumberland, and Middlesex Counties	3	P.m.					4	3	Wind, electrical, and hail	High winds demolished brooder house and killed 1,200 chicks. Buildings unroofed, and damage to trees and utility lines downed. Lightning fire destroyed barn. Hail accompanied storm in Crewe area. Storm moved westward.
TEXAS Odessa (10 miles west of), Ector County	3				0	0	3		Dust devil	Metal roofing lifted off 100-ft. long building, siding torn out.

See footnotes at end of table.

	3									Minor storms also reported at St. Clair, Mo.; in Buncombe County, N.C.; at Alva, Norman, and Stillwater, Okla.; at Bartonsville, Pa.; at Tullahoma, Tenn.; and at Cameron, Tex.
NEBRASKA Dundy County	4	3:30-4:30 p.m.	35	*10			2	5	Hail	Hailstones 1/2 to 2 inches in diameter. Severe storm, but damage rather low because main crop, winter wheat, had been harvested, and corn stunted by drought. Storm moved southeastward.
NORTH CAROLINA Columbus, Johnston, Lenoir, Pitt, Sampson, and Pasquotank Counties	4	Afternoon			1	1	3		Electrical	Lightning killed 1 boy and injured another under tree, killed 4 mules, set fire to 2 buildings, and damaged telephone lines over several counties.
OKLAHOMA Woodward, Woodward County to Alva, Woods County	4	4-6 p.m.	45	*3			4	2	Hail	Severe hailstorm, with stones up to size of baseballs covered ground in strip across 2 counties. Heaviest damage in Freedom area. Roofs, windows, automobiles, trees, and gardens heavily damaged. Storm moved northeastward.
KANSAS Cheyenne, Thomas, Rawlings, Gove, and Logan Counties	4	4:15-6:10 p.m.			0	0			Hail, wind, and funnel aloft	During severe thunderstorm, numerous strips of hail occurred from west to east across these counties, damaging much grain sorghum and necessitating replanting of wheat. Strip 10 miles long and 6 miles wide was worst damaged in southeast part of Thomas County. Some fields 100 percent loss. Stones up to golf-ball size frequent. Many roofs badly damaged and some newly poured concrete at an elevator had to be releveled after hail. Violent wind blew down seven 100-foot T.V. antennas and bent and damaged many others. Several large store windows blown in. Damage at and near Colby estimated at $6,000 to property and $50,000 to crops. Small funnel cloud aloft sighted near McDonald, traveling south-southeastward about 4:30 p.m.
OKLAHOMA Butler, Custer County	4	5 p.m.	4	*3			3	4	Hail	Hail up to size of baseballs covered ground 1-1/2 inches deep with solid sheet of ice about 9 miles northwest of Butler. Roofs, windows, automobiles, etc., damaged and broken, and crops destroyed. Storm moved west-northwestward.
NORTH CAROLINA Wadesboro (near), Anson County	4	5 p.m.			0	0			Funnel aloft	Funnel observed and described by experienced pilot.
KANSAS Rooks County	4	8-9:30 p.m.							Electrical	Tank battery on oil lease 11 miles west and 2-1/2 miles north of Plainville destroyed by lightning. Explosion blew lid of tank about 200 feet. In Stockton vicinity, 2 fires set by lightning 6 miles apart consumed 1,600 bales of hay.
KANSAS Ellis County	4	8:58 p.m.							Electrical	In Hays, 2 separate lightning bolts damaged T.V. set, 2 clocks, blew fuses at 1 home, and split large tree at the other location. Tank battery and 750 gallons of crude oil burned by lightning 3-1/2 miles north of Catharine.
KANSAS Pratt, Pratt County	4	10:30 p.m.							Electrical and wind	At Pratt, wind broke limbs and trees, causing outages in powerlines. Lightning blew fuses and transformers in north part of town.
MASSACHUSETTS and NEW HAMPSHIRE	4	Night				3	4	1	Electrical, wind, rain, and hail	Northeastern Massachusetts hardest hit area. Major damage from lightning-started fires. Falling trees brought down powerlines. Many communities without power and light generally for short periods. Hail in Haverhill, Mass., area - no damage reported. 3 persons injured in traffic collisions in blinding rainstorm.
	4									Minor storms also reported near Russell and in Sumner County, Kans.; near Hyannis, Nebr.; at Jarvisburg, N.C.; at Geary, Okla.; at Scranton, Pa.; and at Bennettsville, S.C.
KANSAS Lyon County	5	1:30-1:50 a.m.							Electrical	Lightning set fire to barn and 40 tons of hay, 8 miles north of Emporia, with loss of both. Poultry house and 100 hens also burned when lightning hit 5 miles north and 2 east of Emporia at 1:50 a.m.
KANSAS Butler County	5	6:43 a.m.							Electrical	Barn and contents of baled hay 4 miles north and 1 east of Augusta destroyed by lightning.

See footnotes at end of table.

FLORIDA Panama City Bay County	5	Afternoon			0	0			Waterspout	
NEBRASKA Loup City (near), Sherman County	5	Afternoon				1	1	1	Electrical	Woman struck by lightning and suffered burns.
KANSAS Brown County	5	6:30-7 p.m.	25	*2-3			5	5	Hail and wind	Hail driven by 60 m.p.h., winds broke many windows, damaged roofs and sidings of houses, destroyed crops, some trees, and shrubs. Many stones size of golf balls and covered ground to depth of 3 inches. 107 windows broken in Morrill high school. Practically every house in Morrill damaged. Storm less severe when it hit Hiawatha about 7 p.m., but greenhouse suffered loss of about 600 panes of double-strength glass. Storm moved across line from Richardson County, Nebraska. Storm moved southeastward.
NEBRASKA Denton (near), Lancaster County	5	11 p.m.	5	*2			2		Hail	Hailstones size of eggs. Roofs damaged; crops suffered considerable damage. Storm moved southeastward.
KANSAS Beloit (southwest of), Mitchell County	5	Night							Hail	Considerable local damage done to feed crops in small area.
KANSAS Marshall County	5	Night				1			Hail	In an area from 6 miles north of Beattie to near Axtell, crops damaged up to 90 percent by hail. At 1 farm house, 1,100 dead sparrows picked up after storm. Air force plane flying through area at time later landed at Topeka with most of glass in nose of plane broken. The engine, cowling, and leading edges of wings dented. Pilot had several cuts on his face.
TEXAS Muleshoe (near), Bailey County	5				1				Electrical	Man working in field killed by lightning.
	5									Minor storms also reported at Bellevue, Manilla, and Paullina, Iowa; at Augusta, Durham, and Herington, Kans.; at Whitehall, Mich.; near Bloomfield and at Table Rock, Nebr.; at Cushing, Fargo, Granite, and Meeker, Okla.; and in Berkeley County, S. C.
TEXAS Port Aransas (8 miles east of), Nueces County	6	9:25 a.m.			0	0			Waterspout	Waterspout moved westward.
TEXAS Whiterock, Hunt County	6	2:30 p.m.					°4	C	Wind, hail, and rain	Large broiler house and 1,000 fryers ready for market destroyed; farm home damaged, barns blown down, and trees uprooted.
NORTH CAROLINA Wayne County	6	Afternoon					3		Wind and rain	Tree blown down on automobile, roofs damaged, and plate-glass windows blown out, with accompanying water damage from 2.25 inches of rain in 20 minutes.
TEXAS Sweetwater, Nolan County	6	3:52 p.m.			2	12			Electrical	Lightning struck tree beneath which girl students awaited transportation from school. 2 killed, 8 others hospitalized, and 4 slightly injured.
TEXAS Clarendon and Hedley, Donley County	6	5:15 p.m.	15	*2					Hail	Hail in scattered areas destroyed about 1,200 acres of cotton and many more acres of feed crops; damaged some roofs. Storm moved northeastward.
TEXAS Memphis, Estelline, High Point, Carey, and Tell areas, Hall and Childress Counties	6	6-7 p.m.	50	*4				5	Hail	Cotton crops heavily damaged or destroyed in scattered areas. Storm moved northeastward.
NORTH CAROLINA Burke County	6	6:30 p.m.					4		Wind	Warehouse blown down and store unroofed.
NEW MEXICO Clovis, Curry County	6	P.m.							Rain	5.26 inches of rain fell, flooding lowlands and damaging streets and highways.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CALIFORNIA Los Angeles County, western San Bernardino and Riverside Counties, Orange, and San Diego Counties	6						4		Wind, electrical, and rain	Widespread thunderstorms associated with extremely warm weather caused many brush fires and locally strong winds. Lightning-caused brush fire at Palmdale destroyed 1 home, 2 garages, and a car, and damaged 2 other structures. Flash flood inundated roads in Mojave Desert between Palmdale and Lancaster. Winds up to 60 m.p.h., swept parts of San Bernardino County, and lightning caused brush fires in Mill Creek, Oak Glen, Lucerne Valley, and Mission Canyon areas. Brief windstorm in Barstow tore down powerlines. In San Diego County, gusty winds knocked down powerlines, disrupting service at Chula Vista, Coronado, and Imperial Beach. Winds of 43 m.p.h., reported at San Diego Yacht Club.
	6									Minor storms also reported at Arkansas City, Augusta, Baxter Springs, Glen Elder, near Junction City, Phillipsburg, and Wichita, Kans.; in Winston-Salem area, N. C.; at Ardmore, Claremore, Granite, Sequoyah, and Stigler, Okla.; and at Decatur, Tex.
	6-7									Minor storm reported at Odessa, Tex.
TEXAS Waco, Crawford, and Lorena areas, McLennan County	7	2:20-2:50 a.m.					4		Electrical	Barn and feed contents destroyed by fire caused by lightning. Another barn with contents and a vacant house struck by lightning and burned down; calf fatally burned.
MISSOURI Aurora, Lawrence County	7	7 a.m.					2		Rain and electrical	1.15 inches of rain in 30 minutes. Severe lightning.
VIRGINIA Rappahannock and Culpeper Counties	7	4 p.m.					3		Wind, electrical, and rain	Storm accompanied by winds to 57 m.p.h., lightning, and heavy rain. Church steeple blown off at Culpeper. Scattered damage to trees, buildings, and utility lines. Storm moved westward.
	7									Minor storm also reported near Newman Grove, Nebr.
FLORIDA Jacksonville, Duval County	8	1 p.m.			1				Rain and wind	1 person drowned in St. Johns River when rough waters washed him overboard from boat.
MASSACHUSETTS Leominster Worcester County	8	9:30 p.m.				2	2	1	Wind and electrical	Strong gust of wind during electrical storm blew in window of restaurant, causing injury to 2 women.
WEST VIRGINIA Mingo County (central portion)	8							1	Rain	Heavy rains caused temporary overflow of small streams, inundation of roads and highways in several places, and some traffic-blocking landslides.
	8									Minor storm also reported at Daufuskie, S.C.
TENNESSEE Cleveland, Bradley County	8-16							1	Rain	12 to 15 city streets flooded, washed out, or closed.
FLORIDA Jacksonville, Duval County	9	6 p.m.			0	0			Rain, wind, and waterspout	Wind gusts to 68 m.p.h., damaged number of homes in Cedar Hills section; trees blown down and electrical and telephone services disrupted. Waterspout also sighted during storm.
NEW MEXICO Silver City, Grant County	9	P.m.							Rain	Considerable street damage.
	9									Minor storms also reported near Arnold and St. Libory, Nebr.
MARYLAND Baltimore City area	10	2:45 p.m.							Rain	Locally severe thunderstorms and locally heavy rains hit Baltimore area. Downpour of rain and flash flooding knocked out Charles Street bridge, contributed to failure of a 150-ft.section of 72-year old retaining wall which slid into bed of Jones Falls. Heavy rains throughout city flooded streets and basements and stalled vehicles at many points.
TENNESSEE Johnson County (south-central portion)	10	3-3:15 p.m.	11	2640			4	5	Hail	Some hailstones club-shaped 2 inches or more in length; ground covered with hail to depth of 1/2 inch. Some damage to roofs and windows, but greatest damage to tobacco crops in process of being harvested and to truck crops. Storm moved east-northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
DELAWARE Bridgeville, Sussex County	10	3:20 p.m.			0	0			Tornado	Twister hit narrow belt of Sussex County. It hurled large chickenhouse 50 feet into tree, knocking poultry farmer to ground. It then cut swath of destruction through woodlands near Bridgeville area. Sudden storm was variously described by residents as "a big funnel", a "whirlwind", and "a column of air that looked like it had a big cedar tree in its center". Storm jumped leap-frog style and hit other points, snapping trees like match sticks and causing some minor property damage. Storm moved northeastward.
TEXAS Pecos-Reeves County line	10	7 p.m.						6	Hail, wind, and rain	Severe damage to maturing cotton. Storm moved northeastward.
TENNESSEE Edwina Community, Cooke County	10	Early p.m.							Hail	Hail "as large as Hens' eggs" extensively damaged plum and apple trees and shrubbery.
PENNSYLVANIA Southeastern Counties	10	Night					4	1	Electrical	Lightning struck several homes in area.
	10									Minor storms also reported at Great Bend, Topeka, near Larned and Russell, Kans.
OKLAHOMA Fairview, Major County	11	6:10 a.m.						1	Electrical	Lightning struck and burned large barn and contents.
OKLAHOMA Cresent, Logan County	11	10:30 a.m.						1	Electrical	Lightning caused fire which destroyed large barn and contents of seed, machinery, and horse trailer.
NEW MEXICO Lea County (northern portion)	11	3 p.m.					5	C	Hail and rain	Major damage to crops. Hail up to 1 inch in diameter.
LOUISIANA New Orleans Orleans Parish	11	3:30 p.m.				3	3	1	Electrical	3 workers injured, 1 seriously, when lightning struck drilling rig.
TEXAS Dallas County	11	3:30 p.m.	1/8	75			4		Wind	Drive-in theater screen and adjacent lumber sheds damaged. Metal roof of shed blown 150 feet, dropped on top of gas main which broke. Straight-line winds, no tornado activity. Storm moved eastward.
TEXAS Andrews, Andrews County	11	3:35 p.m.				4	4		Wind, hail, rain, and electrical	Store windows broken, cars in car lot damaged, 3 trailer houses damaged, 5 houses damaged by flying debris, trees uprooted, small buildings blown down. Woman and 3 small children injured. Twister-like activity, shown on radar as not tornado. Storm lasted less than 15 minutes. Moved southeastward.
TEXAS Seminole, Gaines County	11	5 p.m.	60	*6-8			5	5	Hail and rain	Probably as many as 1,500 acres of cotton damaged in varying degrees. In Seminole, roofs battered, windows broken, automobiles and trucks scarred, signs smashed. Accompanying heavy rain. Storm moved southeastward.
TEXAS Between Melvin and Brady, McCulloch County	11	5-9:30 p.m.	15-20	*3-4			5	4	Wind and hail	Barn and chickenhouse with 900 chickens destroyed; trees and feed and haystacks blown down and scattered. Hail damaged crops. Storm moved eastward.
TEXAS Nolan area, Nolan County	11	7 p.m.	5	*4					Hail, wind, and rain	Cotton and maize, some hegari and cane sorghum 50 to 100 percent destroyed. Some roofs destroyed. Accompanying winds 50 to 60 m.p.h., and heavy rain. Storm moved southeastward.
TEXAS North of Rotan to Roby, Fisher County	11	7 p.m.							Hail	Hail in Double Mountain area damaged about 25 percent of cotton crops over several hundred acres. Storm moved southward, covering several thousand acres, with estimated 30 percent damage.
TEXAS Muenster (near), Cooke County	11	7:30 p.m.	10	*2			4		Electrical and wind	Lightning-caused fire destroyed 2 barns and about 6,000 bales of hay and other farm items. Tree limbs and small trees broken off; fuses blown and plugs in cords blown out in homes. Storm moved eastward.
TEXAS La Pryor (4 miles northwest of), Zavala County	11	8-11 p.m.				1	3		Electrical, wind, and rain	Lightning ignited large 2-story barn, destroying it and contents. Owner had heart attack. Wind and rain moderate. Storm moved southward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

SEPTEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Maryville (near), Blount County	11	11 p.m.							Electrical	11 cows struck by lightning and killed.
TEXAS Courtney-Tarzan area, Martin County	11							6	Hail and rain	During 12-minute period, hail severely damaged maturing cotton. Stalks stripped, then shredded; feed completely denuded; tree limbs twisted off. Some farmers had 100 percent loss, others from 10 to 50 percent. Accompanied by 1 inch rain. Storm moved northward, then southeastward.
	11									Minor storms also reported at Florence and Haleyville, Ala.; at Alva, Kingfisher, Tulsa, Waurika, and Yale, Okla.; in Newport County, R. I.; and at Knoxville, Tenn.
TEXAS Nacogdoches, Nacogdoches County	12	4-7 a.m.					5		Electrical	Lightning-caused fire destroyed large warehouse and contents, mostly broiler feed, and damaged nearby boxcar and contents.
TEXAS San Antonio (25 miles north of), Bexar County	12	Early a.m.					4		Electrical	Lightning struck and burned barn with 39 goats, 1200 bales of alfalfa, 1050 bales of hegari, 350 sacks of cottonseed hulls, and machinery.
MARYLAND Baltimore City area	12	7 p.m.						1	Electrical	Lightning struck at least 2 homes in Baltimore and top of utility pole in Catonsville. Lightning crumbled chimneys in Hamilton and Fullerton districts.
KENTUCKY Boyd County	12	P.m.					4		Wind	Winds accompanying thunderstorm caused considerable property damage, uprooted trees, and caused disruption to electric and telephone services. Roofs lifted off buildings, homes and other buildings damaged by falling trees.
TENNESSEE McMinnville, Warren County	12	P.m.							Electrical	16 sheep struck by lightning and killed.
	12									Minor storm also reported at Waynesboro, Pa.
KANSAS Thomas County	13	1-3 p.m.	5	1000	0	0	4	4	Hail, wind, and funnels aloft	Hail size of golf balls fell at Colby and to southeast of town. Storm moved slowly southeastward with hail continuing 15 to 20 minutes. Little wind accompanied hail. Major damage to roofs in southern part of Colby and to grain sorghums in southeastern part of County. 3 funnel clouds observed aloft south of Colby. Attending locally severe winds destroyed 2 farm buildings.
MASSACHUSETTS Saxonville, Middlesex County	13	3:30 p.m.			0	0	1	1	Dust devil	Occurred in Pinefield development. No damage. Moved eastward.
NEW MEXICO Roswell-Dexter area, Chaves County	13	4:40 p.m.					°5	C	Rain, hail, and wind	Major damage to crops north of Dexter. Barn and 2 graineries destroyed; some evidence of tornado action but unable to confirm.
TEXAS Muleshoe to Kress, Bailey and Swisher Counties	13	5-9 p.m.	80	*1-3				6	Hail and rain	Cotton damaged 50 to 100 percent; damage to grain sorghums up to 50 percent; forage crops stripped. North of Muleshoe, hail preceded by hard rain. Very little wind. Storm moved eastward.
COLORADO Eastern portion	13	Afternoon-night							Electrical, snow, and hail	Electrical storm did $2,000 damage to power equipment in Littleton area. Lightning struck 13,000-volt breaker, south of Littleton, cutting out power that serves Louviers and adjacent communities. Pilot reported large hail aloft, 15 miles southeast of Pueblo, which did damage to aircraft. First heavy snow of season fell along Continental Divide closing Trail Ridge and Mount Evans roads for a time. Storm moved eastward.
KANSAS Clay County	13	6:39 p.m.			0	0			Funnel aloft	Funnel cloud aloft reported by pilot about 45 miles northeast of Salina.
NEW MEXICO Hobbs and vicinity, Lea County	13	P.m.			0	0			Funnels aloft	Reports of funnel clouds both north and south of Hobbs; evidently did not touch ground.
TENNESSEE Bristol, Sullivan County	13	P.m.						1	Rain	Cloudburst flooded streets, backing water into some store fronts.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons Killed	Number of persons Injured	Estimated damage by categories † Property (exclusive of crops)	Estimated damage by categories † Crops	Character of storm	Remarks
TENNESSEE Knoxville, Knox County	13					2		1	Electrical	Lightning struck 2 power transformers, causing minor injuries to 2 women in nearby buildings, damaged roof of 1 residence and tore hole in concrete-block wall of a second.
	13									Minor storms also reported near McPherson and Tescott, Kans.; and at Alva and Beaver and in Harper County, Okla.
OKLAHOMA Gage, Ellis County	14	12:20 a.m.	5				4		Hail and rain	Heavy hail, with stones up to 2 inches in diameter, damaged roofs, automobiles, gardens, etc. Storm moved southwestward
GEORGIA Dade and Floyd Counties	14	A.m.					4	1	Electrical	Lightning destroyed 1 residence and 1 barn and killed several farm animals. Several other houses damaged and many electrical appliances burned out. Utility lines damaged, causing interruption of service in several areas.
TEXAS Provident City, Colorado County	14	12:15 p.m.			0	0			Funnel aloft	Observed moving northeastward. Extended to within 100 feet of ground.
OKLAHOMA Custer, Blaine, Caddo, Canadian, Grady, Oklahoma, and Cleveland Counties	14	2-6 p.m.	90	10			5	5	Hail, wind, rain, and electrical	Severe hailstorm caused variable and spotted destruction over extensive area from southwest of Clinton, Custer County, to southern part of Oklahoma City, Oklahoma County, and in northern part of Cleveland County. Stones mostly smaller than golf balls, with a few up to as large as baseballs caused extensive roof, window, and automobile damage throughout area. Up to 50 percent loss of cotton and feed crops resulted from hailstorm. Strong winds at spotted points caused damage to trees, TV antennas, and outbuildings. Severe lightning accompanied storm. Considerable damage resulted to electrical appliances in Hydro area of Blaine and Caddo Counties. 1 barn burned which contained 1,000 bales of hay. Heavy rains caused local flooding and a building collapsed under weight of water, causing estimated $15,000 damage. Storm moved eastward.
ALABAMA Flat Rock, Jackson County	14	Late afternoon				2	1	1	Electrical	Lightning hit light pole. 1 man severely burned and trousers torn off by bolt, while another about 15 feet away knocked briefly unconscious but otherwise not hurt.
TEXAS Wichita Falls area, Wichita County	14	5-6 p.m.					4		Wind, rain, and hail	Barn west of Wichita Falls leveled, automobile and tractor damaged. Roofs damaged in Nocona. Widespread minor damage at Randlett where observer said, "In 15 minutes 3 inches of rain and hail combined fell there." In Wichita Falls, filling station smashed, roof removed and interior left a shambles. School windows broken; signs blown down; minor damage to roofs, porches, and other structures. No evidence of tornado activity.
OKLAHOMA El Reno area, Canadian County	14	5:30 p.m.						1	Electrical, rain, and hail	Lightning struck home, burning out TV set, set divan on fire, and cracked plaster. Barn southwest of El Reno hit by lightning and burned. It contained 3000 bushels of grain. Hail fell in area. Storm moved eastward.
OKLAHOMA Randlett, Cotton County to Waurika, Jefferson County	14	5:30-6 p.m.	30	*8	0	0	4	4	Wind, rain, and hail	Strong winds and heavy hail caused considerable damage to roofs and outbuildings on about half and half basis. Winds estimated at 80 m.p.h., and hail up to 2 inches in diameter reported. Cotton and feed crops damaged up to 50 percent as result of hail. Heaviest hail damage resulted over strip 10 miles long and a mile wide from Randlett to Taylor. Storm moved eastward.
OKLAHOMA McClain, Cleveland, Pottawatomie, Seminole, and Hughes Counties	14	5:30-8 p.m.	70	800	2	6	5	4	Tornado, wind, rain, and hail	Tornado formed in vicinity of Wayne, McClain County, traveled hit and miss path, and last damage noted in northern Hughes County. First evidence on ground was in southern Cleveland County along path 3 miles long and 1/4 mile wide where 3 barns destroyed, trees broken, and crops flattened by wind, rain, and hail. Worst hit was 7-mile path near Sacred Heart in Pottawatomie and Seminole Counties at 6:55 p.m. 2 persons killed and 6 injured in 3 homes which completely destroyed. Many other homes and buildings extensively damaged. Extensive damage noted throughout area. Oil field equipment loss estimated at $40,000 included 8 rigs destroyed. Last damage noted in Butner and Wetumka area. Butner school had damage estimated at $32,000. Wind damage at Wetumka to roofs, trees, and TV antennas extensive. Storm moved east-northeastward.

See footnotes at end of table.

OKLAHOMA Shawnee (5 miles west of), Pottawatomie County	14	5:56 p.m.	5	400	0	3	5	4	Tornado and rain	Tornado reported to have had twin funnels struck Bethel community 5 miles west of Shawnee. School buildings, 15 to 20 homes, and numerous outbuildings destroyed or damaged. 3 persons severely injured when their homes destroyed. Heavy rains fell in area. Storm moved eastward.
TENNESSEE Bristol, Sullivan County	14	6-6:35 p.m.						1	Wind, rain, and electrical	Heavy rains flooded downtown streets and basements. Wind uprooted trees and damaged power- and phone lines. Lightning caused 1 minor fire.
TEXAS Burkburnett (5 to 6 miles west of), Wichita County	14	6:15 p.m.			0	0			Funnel aloft	
TENNESSEE Chattanooga and vicinity, Hamilton County	14	6:40 p.m.						1	Wind, rain, and electrical	Heavy rains flooded numerous streets. Wind deroofed and blew out side of tool shed, damaging nearby truck and haybaler, uprooted several trees, downed powerlines, and damaged 2 stored airplanes. Lightning caused minor damage.
TEXAS Decatur (west-northwest of), Wise County	14	8:25 p.m.			0	0			Funnel aloft	
TEXAS Gainesville, Cooke County	14	9 p.m.	3	880		1	3		Wind and electrical	Straight-line wind, not a tornado. Farm home and outbuildings, boat, and trailer damaged; trees knocked down, and hothouse destroyed. Lightning shocked and partially paralyzed a woman temporarily. Storm moved northward.
TEXAS Sherman, Grayson County	14	9:30 p.m.					4		Electrical	Lightning touched off fire at some oil tanks. Also caused fire at a home, with extensive damage to wiring and furnishings.
OKLAHOMA Wewoka (10 miles east of), Hughes County	14	P.m.			0	0	1	1	Tornado	Highway Patrol reported tornado on ground 10 miles east of Wewoka. No additional information reported. Evidently struck in open country for a short time.
OKLAHOMA Marshall and Johnston Counties	14	P.m.							Wind, rain, electrical, and hail	Lightning destroyed TV antenna in Willis and exploded a 250-gallon oil tank at Pure Oil Camp in Marshall County. Hail caused considerable crop damage near Lark. Winds at Mannsville, Johnston County, blew down a tree that damaged a truck.
OKLAHOMA Kingfisher County	14	P.m.			1			1	Electrical	3 lightning strikes reported. 2 homes hit about 10 miles west of Kingfisher. Damage to 1 home estimated at $100. Woman killed by lightning near Cashion while out in open grass field.
TENNESSEE Johnson City, Washington County	14	P.m.			1		1	1	Electrical	11-year-old boy struck by lightning and killed while playing under maple tree. It is reported that rain had not yet started when lightning struck.
	14									Minor storms also reported near Flat Rock and at Huntsville, Ala.; at Wichita, Kans.; at Fairview, Garber, Okmulgee, Pauls Valley, Prague, Tishomingo, Tonkawa, Westville, and near Kingfisher, Okla.; and in Muenster area, Tex.
OKLAHOMA Tahlequah, (7 miles southwest of), Cherokee County	15	1:30 a.m.					4	1	Electrical, wind, and rain	Lightning caused fire which burned home.
OKLAHOMA Pushmataha and Choctaw Counties	15	A.m.	40	*25					Wind, rain, and electrical	Strong winds and lightning damaged trees and utility lines over southern Pushmataha and most of Choctaw Counties. Storm moved southeastward.
TENNESSEE Columbia, Maury County	15	Noon				1		1	Electrical	Lightning struck house, causing slight damage and inflicting injuries to a woman.
PENNSYLVANIA Germania, Potter County	15	4 p.m.	2	30	0	0	4	1	Tornado	Numerous windows blown out, barn destroyed, and trees and utility poles sheared off at ground level. Tornado moved northeastward.
PENNSYLVANIA Selinsgrove and Sunbury areas, Snyder and Northumberland Counties	15	7 p.m.			0	2	4	1	Tornado	Tornado struck hangar at Penn Valley airport near Selinsgrove, injuring 2 men. 4 airplanes inside hangar also damaged, 1 extensively. Tornado moved southeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

SEPTEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ALABAMA Dothan, Houston County	16	12:50 p.m.			0	0	1	1	Funnel aloft and rain	Following report received from Chief, Air Traffic Communications Section, Dothan: "A large cumulonimbus with roll-type cloud observed about 6 miles northwest of Dothan Municipal Airport at 12:50 p.m., Sept. 16, 1957. Roll cloud extended northeast and southwest ahead of the cumulonimbus and moving northeastward very slowly. Base of roll cloud appeared to be about 1200 or 1500 feet above surface. Just behind roll, large funnel formed and extended to about 500 feet above ground. Funnel was approximately 2 to 3 hundred feet in diameter. Wind moved counter clockwise around funnel. Funnel observed for approximately 8 minutes. This system appeared to be moving approximately 20 m.p.h. Heavy rainshowers observed behind roll cloud. This condition verified by a reliable party during the condition at the location by telephone. As funnel dissipated a large eye formed in the roll cloud."
MAINE Sherman Mills, Aroostook County	16	2:30-3 p.m.	5	50	0	0	3	2	Tornado	Funnel cloud observed. Tornado wrecked barn, severely damaged 2 homes, twisting one off its foundation and nearly ruining it. Shed upended and smashed, and children's playhouse ripped apart. Many trees downed, including a number of apple trees. Several large, heavy wooden beams carried 300 to 500 feet in air. Evidence of skipping about a mile in each of 2 places along 5-mile path. Tornado moved eastward.
MASSACHUSETTS Springfield and vicinity, Hampden County	16-17	Evening-early a.m.					4	1	Rain and electrical	More than 100 locations reported sewers backing up, cellars flooded, and washouts. Trees struck by lightning fell across powerlines, causing brief loss of power.
WASHINGTON Eastern portion	17	Evening			2				Wind and dust	Visibility reduced to zero in several areas by blowing dust. Several automobile accidents resulted from restricted visibility. 2 persons killed when their small plane crashed near Kennewick during duststorm. Large number of power and communication outages occurred.
LOUISIANA Southeastern portion	17-18				3		5	5	Tropical storm	Tropical storm Esther which moved northward across southeastern Louisiana during night of 17th and 18th notable mostly for heavy rains which fell in squalls moving northeastward from center. Heaviest rains fell in Plaquemines Parish from Burrwood to Port Sulphur with 18.11 inches falling at Delta Wildlife Refuge near Pilottown between 9:10 a.m., on 17th and 3:30 p.m., on 19th. At Port Sulphur, 2.50 inches fell in 1 hour between 2 and 3 a.m. on 18th. Small house blown down at Boothville during squall and livestock feed plant collapsed at Amite reportedly from heavy rains of storm. Combination of heavy rains and tidal water flooded homes in Buras area from 18th through 26th, with considerable loss of furnishings and damage to floors and walls. 2 boys drowned in rain-swollen canals in New Orleans and boy electrocuted by "live" wire while pushing boat through floodwaters at Buras. These are indirectly attributable to storm Esther.
NORTH CAROLINA Iredell County	17-18						4	3	Rain	Up to 9 inches of rain fell in parts of County in less than 24 hours, causing flash-flood damage to lowland crops, livestock, and property.
MISSISSIPPI Southern half	18	All day				2	5	5	Tropical Storm	Tropical storm Esther moved northward through central Mississippi during morning of 18th It caused high tides on coast, with widespread minor wind damage, but heavy rains over Panhandle and northward to Laurel caused further damage by flooding highways, stores, and homes. Storm rains exceeding 10 inches recorded at Bay St. Louis, Biloxi, Gulfport, Richton, and Van Cleave. On the heels of previous heavy rains, squalls and heavy rains of Esther damaged cotton and corn in southern half of State. 2 persons injured by downed "live" wire at Biloxi.
ALABAMA Selma, Dallas County	18	2:45 p.m.	10	100	0	0	4	3	Tornado	Began along river just east of Selma and followed skipping path. 3 important short dips destroyed 3 tenant houses, damaged 3 others, and destroyed corn crib. Crop loss mostly to open cotton. Group of women in card game commented on noise being made overhead "by those planes", and later identified roaring wind which did not strike the house. 1 man loaded his family into a car and outran the boiling black funnel. He returned to find considerable damage to his premises. Storm moved north-northwestward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEBRASKA North Platte, Lincoln County	18	4-5 p.m.	10	*3			4	3	Hail	Hailstones 1/2 to 1-1/2 inches in diameter. Storm moved southeastward.
NEBRASKA Pierce, Pierce County	18	11 p.m.				1	2	1	Electrical	Woman burned.
	18									Minor storms also reported at Mobile, Ala.; at Gardner, Mass.; at Ord and Pierce, Nebr.; at Elizabeth City and Hertford, N.C.; and at Montrose and Wakonda, and in Brown, Grant, Hand, Lincoln, and Tripp Counties, S. Dak.
MONTANA Helena and vicinity, Lewis and Clark County	18-19	5:45 a.m.	50	*40			4	1	Snow	24-hour snowfall of 13.4 inches was greatest 24-hour September snowfall of record, and 9-inch maximum depth was also a new September record. In Helena, heavy snow broke trees and limbs requiring $9,000 labor from city crews to remove debris. Damage to trees severe, impossible to determine money value. Telephone and power companies expended $1,350 repairing lines broken by falling tree limbs. Snow on mountain passes hampered motor traffic.
ALASKA Barter Island area	18-22	10:30 p.m. 18th- 8 a.m. 22d				3			Wind and snow	With lack of ice on Arctic Ocean water became very rough. Abnormally high tides. Section of land washed away between Barter Island and Spit where runway and airport installations located. About 4,400 barrels of aviation gas washed away. Part of runway undermined by rough water. Navy LST ran aground and whale boat lost in storm. Snow drifted to 10 feet deep. Many vehicles trapped by drifts. 3 Weather Bureau personnel injured while attempting to launch RAOB balloon on 19th. Wind speed reached peak on 19th of about 75 m.p.h., and gusts to about 95 m.p.h.
FLORIDA New Port Richey, Pasco County	19	11:45 a.m.			0	0			Waterspout	Sighted offshore from New Port Richey; touched water.
WISCONSIN Hillsboro (6 miles northwest of), Vernon County	19	12:30 p.m.	10	165	0	0	4	4	Tornado	Tornado moved northeastward.
	19									Minor storm also reported at Blair, Nebr.
KANSAS Morris County	20	6:30 a.m.							Electrical	Barn south of Council Grove, with 500 bales of hay and one north of town, with 900 bales of hay, struck by lightning and burned.
KANSAS Franklin and Johnson Counties	20	Early morning			0	0			Funnel aloft and electrical	About 4:20 a.m., funnel aloft observed 3-1/2 miles southwest of Ottawa. Lightning flashes made funnel distinctly visible, in vertical position. Also usual loud roar heard. Apparently same storm that passed over Sunflower in early morning which had dirty-brown appearance. Funnel observed to swoop low to tree tops near Sunflower, but no actual damage resulted. Storm moved northeastward.
KANSAS Sedgwick County	20	Early a.m.							Electrical	Several lightning strikes caused damages in and near Wichita about daybreak. At 5:08 a.m., tree struck and 3-inch electric cable cut in two at mattress factory in east Wichita. Barn filled with 1,000 bales of hay burned northeast of Kechi, and church struck and tile torn from roof. Stones from building thrown 200 feet.
KANSAS Burlington (near), Coffey County	20	Early morning							Electrical	2 barns burned when struck by lightning.
MISSISSIPPI Walthall County	20	2 p.m.			0	0	2	2	Tornado (suspected)	Unconfirmed tornado in uninhabited eastern portion of Walthall County; thunderstorm reported at Tylertown.
TEXAS Hardeman, Wilbarger, Foard, Hall, and Childress Counties	20	4:30-10 p.m.					5	5	Hail and wind	Extensive storm damaged much irrigated cotton, and destroyed wheat crop. Damage spotted, estimated 25 to 90 percent; most severe in Odell, and Quanah, and Chillicothe areas. Windows broken; roofs and TV antennas damaged; watermelon crop destroyed. Storm moved eastward.
TEXAS Midland (18 to 20 miles southwest of), Midland County	20	5:20 p.m.			0	0			Funnel aloft	

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Custer and Blaine Counties	20	5:30 p.m.			0	0			Tornado, wind, rain, hail, and electrical	Several persons sighted large funnel touching ground just west of Clinton and moving toward Arapaho. No damage reported. Strong winds in area blew down trees and damaged utility lines. In southern Blaine County, several farmsteads reported damage to buildings and trees from strong winds. Heavy hail reported in eastern Custer and southern Blaine Counties. Storm moved north-northeastward.
TEXAS Vernon (6 miles north of), Wilbarger County	20	6 p.m.	1/2	100-200	0	0	4		Tornadoes	2 funnels reached ground, tore end off hangar at airport, damaged house and garage, debris strewn about 200 yards. Electric light posts blown down, 2 barns damaged, and stack of hay scattered. Storm moved southward and southeastward.
OKLAHOMA Tillman County (western portion)	20	7-9 p.m.							Wind, rain, hail, and electrical	Lightning fire burned home northwest of Frederick. Remodeling and new kitchen equipment valued at $4,000 had just been completed. Strong winds, heavy rain, and hail which covered area 10 miles by 5 miles 2 inches deep with stones up to 3/4 inch in diameter caused damage up to 50 percent to cotton and grain sorghums. Hail caused considerable damage to roofs and strong winds twisted house off its foundation and damaged outbuildings, trees, etc.
KANSAS Arkansas City (south of), Cowley County	20	8:20 p.m.							Electrical	Lightning struck a large barn which appeared to explode. The barn, 1700 bales of hay, 1000 bushel of oats, and some feed and equipment lost.
OKLAHOMA Caddo County	20	10 p.m.							Electrical and rain	Lightning struck home, burned out TV set and freezer in Carnegie. Large barn filled with hay and seed wheat burned by lightning near Alfalfa. Lightning fire burned barn and 750 bales of hay 8 miles east of Carnegie. Heavy rains of up to 6 inches fell in area.
OKLAHOMA Marlow area, Stephens County	20	10 p.m.			0	0	1	1	Tornado	Funnel aloft sighted west of Marlow, moved eastward aloft across City, and dipped to ground momentarily 2 miles east. No damage reported.
KANSAS Sedgwick County	20	10:40 p.m. and 10:55 p.m.					4		Electrical	Repeated bolts of lightning 15 minutes apart struck Sandy Beach Inc. facilities in south Wichita, destroying large dance hall, beach house, oil storage tank, and appliances and resort equipment. Second bolt appeared as ball lightning and did little damage.
	20									Minor storms also reported at Muscatine and Ottumwa, Iowa; at Arkansas City, Kansas City, Neodesha, and Ottawa, Kans.; at Canton and Salisbury, Mo.; and at Lawton, Okla.
MISSOURI Osceola, St. Clair County	21	1 a.m.							Electrical	Large barn and contents destroyed when hit by lightning.
OKLAHOMA Cushing, Payne County	21	8:15 a.m.				1	2	1	Electrical	Lightning struck sink in dairy barn. 2 persons and horse knocked down by bolt, 1 received minor injury. Framework around sink splintered.
OKLAHOMA Bryan County	21	Day					3	4	Rain and electrical	Up to 11 inches of rain fell over Bryan County, causing extensive damage to cotton and peanut crops. Storm moved southeastward.
MICHIGAN Shiawassee and Genesee Counties	21	4 p.m.	26	30	0	0	°3	C	Tornado	Tornado traveled east-northeastward from Owosso to 6 miles east of Flushing. Damage not continuous, funnel dipping several times observed by witnesses. Damage mostly from trees falling on buildings.
PENNSYLVANIA Erie, Erie County	21	6 p.m.	** 440	200	0	3	4	1	Tornado	Widespread property damage resulted. 3 persons injured by flying objects. Numerous windows broken, trees uprooted, and roofs blown off. Tornado moved southward.
OKLAHOMA Ringling, Jefferson County	21	P.m.				2		1	Electrical	Woman struck by lightning while in cafe and pedestrian received slight shock. Lightning struck house, damaging wiring and telephone.
	21									Minor storms also reported at Coalgate and Norman and in Garvin County, Okla.; and at Abilene, Tex.
TENNESSEE Memphis Shelby County	21-22							1	Rain	Heavy rain flooded streets and about 50 homes; 250 other homes affected.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Harris, Brazoria, Chambers, Liberty, Jefferson, Colorado, and Matagorda Counties	21-22							6	Rain	Rice crop damaged to extent of about $15 per acre.
MICHIGAN South Fox Island (5 miles southeast of), Leelanau County	22	1:21 p.m.			0	0			Waterspout	Waterspout moved northeastward.
TENNESSEE Knoxville, Knox County	22	P.m.				1	1	1	Electrical	Woman shocked by lightning while indoors, suffered minor injuries.
MASSACHUSETTS, VERMONT, and NEW HAMPSHIRE	22	Evening				1			Rain and electrical	Heavy rains caused some road washouts in parts of upper Connecticut Valley. Clogged drains caused street flooding in Pittsfield, Mass., and several nearby towns. Loss of light and power in scattered areas of upper Connecticut Valley when transformers struck by lightning.
	22									Minor storms also reported in Harlan County, Ky.; at St. Joseph, Mo.; and at Vandergrift, Pa.
MASSACHUSETTS Framingham, Middlesex County	25	11 a.m.			0	0	1	1	Dust devil	Spiraling dust cloud carrying leaves and debris observed by several persons. Caused no damage.
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	26	All day							Wind	Northwest gales did widespread damage. Major losses resulted from wind-downed trees falling against buildings and across powerlines.
TEXAS Earth area, Lamb County	26	6 p.m.	40						Hail	Cotton, grain and feed crops damaged from light to 75 percent. Storm moved northeastward.
NEW MEXICO Roosevelt County (northern portion)	26	P.m.	18	*9				5	Hail	About 3,000 acres of crops damaged. Hailstones reported 1/2 to 1-3/4 inches in diameter. Storm moved south-southwestward.
CALIFORNIA From Salinas-Stockton area northward	26-28						4		Rain and wind	Pacific Northwest storm with cold front moving across northern part of State beginning on evening of 26th caused widespread and locally heavy rains. Rainfall in excess of 4 inches occurred at many northern mountain stations, and on extreme north coast. Unseasonable rains caused considerable crop damage. At McCloud, Siskiyou County, heavy rains exceeding 7 inches caused flooding of Thimbleberry Creek, washing out fences and sidewalks, and flooding 3 homes. At Mt. Shasta, flash flooding, caused by rainfall of 6.78 inches, dumped tons of mud and debris on city streets. At Woodland, Yolo County, leaf-plugged gutter drains flooded streets in business and residential areas. Some streets in Davis flooded to depths up to 1 foot due to unfinished storm-drain project. Strong winds damaged fences and gardens at Point Arena.
TEXAS Odessa (14 miles northwest of), Ector County	27	Midnight				1	4		Electrical	Lightning set fire to half-full 1500-barrel capacity oil tank. 1 fireman suffered minor burns. Storm moved westward.
	27									Minor storm also reported at Tuscaloosa, Ala.
	28									Minor storm reported at Marietta, Ga.
NORTH CAROLINA Beaches and lowlying areas near sounds and estuaries	28-29						4		Wind, rain and tides	Severe storm offshore caused strong easterly winds and rains up to 9 inches in 24 hours, tides up to 6 feet above normal. Damage to boardwalks, private piers, seawalls, roofs, and storefronts. Considerable beach erosion and some water in houses.
CALIFORNIA From Santa Clara and Merced Counties northward	29	Morning-late afternoon					4		Electrical and hail	Widespread thunderstorms associated with upper-level cold low off California coast. Lightning bolt struck and destroyed huge substation transformer at Coyote Point on San Francisco Peninsula. Powerlines, transformers, and insulators struck by lightning at many places in Davis, Woodland, Colusa, and Knights Ferry areas of

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CALIFORNIA (Cont'd.)										Sacramento Valley. Home struck by lightning 4 miles northeast of Willows, Glenn County. Brief falls of hail 1/2 to 3/4 inch in diameter fell at Fiddletown and Garden Valley in Sierra foothills, and hailstones knocked some grapes from vines in Ukiah area, Mendocino County.
OREGON Practically entire State	29-30	Afternoons -evenings	400	*250	1		5	5	Electrical, hail, and wind	Fairly severe lightning storms well distributed over State, accompanied in several areas by high winds and in Baker and Klamath Counties, particularly, by heavy hail. 1 woman and several head of cattle killed by lightning. Large number power and telephone service interruptions, due to lightning strikes. Trees blown or broken across lines. Some outbuildings burned by lightning strikes and a few demolished by winds. At Bly, Klamath County, every roof damaged by hail, many windows broken, some siding on homes splintered, parked cars battered, merchandise spoiled in stores by melting hail breaking in through windows. 1,500 acres of unharvested oats destroyed. In North Powder area, Baker County, 90 percent of homes damaged, including damage to roofs and broken windows due to hail. Considerable unharvested grain and several tons of potatoes destroyed. Damage by lightning, 12 percent or $24,000; by wind, 8 percent, or $16,000; by hail, 80 percent, or $160,000. Storm moved eastward.
FLORIDA Keatons Beach, Taylor County	30	1:45 p.m			0	0			Waterspout	Waterspout, touching water, moved northeastward over land, remaining in contact with ground. 1 home virtually destroyed, 2 others severely damaged.
CALIFORNIA Susanville, Lassen County	30								Electrical, hail, and rain	Series of violent thunderstorms moved rapidly northward across Lassen County, accompanied by torrential downpours, and frequent hail. In brief hailstorm on north limits of Susanville, hailstones (cone-shaped) as large as golf balls.
GEORGIA Entire State	Last 3 weeks						2	6	Rain	General rains that continued, with only brief interruptions, during last 3 weeks of month interrupted and delayed harvest of peanuts and cotton. Extensive damage to peanuts, that had been dug but not threshed, and to unpicked cotton, mainly in northern part of State will result in considerable losses to producers of these crops. Damage to peanuts due to sprouting and rotting of stems and to discoloration which results in lower grade for nuts that are saved. Losses in cotton primarily due to lower grades, but some reduction in total yield also likely. No estimate available on total dollar losses but expected to be several hundred thousand. Rains of benefit to pastures and early-planted grains and replenished soil moisture that had been seriously depleted in much of State by 2 preceding dry months.
FLORIDA Northwestern portion	During month					Several			Rain	Heavy rains associated with tropical storms DEBBIE and ESTHER and again during last several days of month brought monthly rainfalls of from 15 to 30 inches to northwestern portions during month and caused considerable loss to agriculture in that area, especially to peanuts, cotton, and corn by either disrupting harvest operations or by causing rapid deterioration of unharvested crops. Reports indicate that much of Florida peanut crop will not be harvested as result of exceptionally heavy rainfall during month. Area agricultural losses have been indicated to be about $2 million. These recurring heavy rains during month also caused considerable damages to roads and disrupted forest products operations by making forest roads nearly impassable for long periods of time. The earth fill around dam which forms Lake Talquin near Tallahassee breached during month, causing much road damage near breach and high water downstream. Several cars on road at time of breach washed off road and victims rescued from swirling waters as they clung to trees or other objects. No lives lost, but several persons hospitalized for short time.

See footnotes at end of table.

DELAYED REPORTS										
MAY 1957										
	9									Minor storm reported in Navarre area, Kans.
KANSAS Neodesha (5 miles east of), Wilson County	13	3:30 p.m.							Electrical	House and contents entirely consumed by fire when struck by lightning.
	13									Minor storm also reported at Hays, Kans.
KANSAS Barber County	15	Afternoon					5		Hail	Devastating hail struck southeast portion of County, damaging homes and business houses and causing losses of 50 to 100 percent in wheat fields. Crop losses not estimated.
	15									Minor storms also reported at Ellis and southwest of Russell, Kans.
KANSAS Reno County	15-16	Night 15th-early morning 16th	10	*4					Hail	2 strips of hail in southwestern part of county damaged crops, roofs, windows, and siding of houses. Largest area began about 4 miles south of Arlington and was 10 miles long and 4 wide. The other was small area between Turon and Penalosa. Storm moved southeastward.
KANSAS Arkansas City (northeast of), Cowley County	16	1:26 a.m.				1			Electrical	Lightning struck farm house, shattering plaster, burning out electrical wiring, and causing slight burns to a member of the family.
KANSAS Arkansas City (north of), Cowley County	16	2:30 p.m.							Hail	Heavy hail of odd shape fell. Icy chunks resembled frozen clusters of 1/4-inch ice cubes. Some chunks measured 2 inches long and 1 inch or more thick.
	16									Minor storms also reported near Augusta and at Eldorado and Potwin, Kans.
KANSAS Montgomery County	20	7-8:30 a.m.							Hail and wind	Winds estimated at 70 m.p.h., with strips of hail damaged western and northern parts of County. Trees broken at a number of places. Hail fell at Caney until ground was white with 1/2-inch hailstones. Cherryvale also had some hail. Power and telephone services out for a while. Storm moved northeastward.
KANSAS Lincoln County	20	Afternoon							Hail	Hailstones larger than golf balls damaged metal buildings and crops, and broke a number of windows at ranch home.
KANSAS Hill City, Graham County	20	Afternoon							Wind	New church under construction had cement block walls on east, north, and west sides blown over by gusts of wind reaching 55 m.p.h.
KANSAS Sedgwick County	20	3:30-4 p.m.							Hail and wind	Some hail with stones larger than walnuts fell in various parts of Wichita. Wind also quite prominent, but relatively minor damages resulted.
	20									Minor storm also reported at Burlington, Kans.
	22									Minor storm reported at Sedgwick County, Kans.
KANSAS Sherman County	24	7-8 p.m.							Hail, wind, and rain	Several strips of hail over northwestern part of County battered crops and stripped trees. Stones ranged from marble size to that of walnuts. Drifts of hail remained until next afternoon. Wind gusts reached 70 m.p.h., about 7 p.m. Storm moved northeastward.
KANSAS Sedgwick and Sumner Counties	24	10 p.m.			0	0			Tornado, funnel aloft, and electrical	During severe thunderstorm in Wichita area, 2 houses in separate parts of town struck by lightning, but with only minor damage. At 1 house, lightning appeared as ball of fire darting around room. 2 small tornadoes observed. Near Clearwater, funnel cloud aloft seen by sheriff. Another tornado struck farm plant 2 miles southeast of Mulvane and demolished garage.
KANSAS Cherokee County	24	Night			0	0			Tornado	Small tornado followed path northeastward, damaging several buildings.
	25									Minor storm reported northeast of Columbus, Kans.
KANSAS Meade (near), Meade County	27	3:30-4 p.m.							Hail	30-minute hailstorm, with stones as large as hens' eggs caused considerable damage.

See footnotes at end of table.

DELAYED REPORTS (Cont'd.)										
MAY 1957 (Cont'd.)										
KANSAS Reno County	27	Late afternoon							Hail	A new suburb northeast of Hutchinson hard hit by hail which varied in size from peas to hens' eggs. Gardens, fruit trees, and crops damaged, and many awnings ripped to shreds. Ground white for an hour after storm.
KANSAS Gove (6-1/2 miles southeast of), Gove County	27	Night				1			Electrical	Man suffered burns from lightning.
	27									Minor storm also reported southeast of Oakley, Kans.
KANSAS Saline County	29	7-8 p.m.			0	0			Tornado, wind, and hail	Small tornado pulled trees 1-1/2 feet thick up by roots, sucked windows out of house, and hurled small buildings from their foundations a few miles northwest of Bavaria. Barn near Hedville flattened by severe gust of wind and large accordian door at Schilling Air Force Base ripped off hangar. Some hail damaged crops. Wind speeds reached 76 m.p.h. Storm moved northeastward.
KANSAS Lyndon (4 miles southeast of), Osage County	30	Morning							Electrical	Large barn burned with all contents after being struck lightning.
JUNE 1957										
	8									Minor storm reported at Muncie, Kans.
KANSAS Finney County	9	7 p.m.							Wind, hail, dust, and rain	Band of violent storms swept across Finney County, hitting Garden City about 7 p.m. Severe hail and wind damaged buildings and crops about 25 miles northwest of Garden City. Locally severe duststorm 2 miles wide 12 miles north of Garden City made driving dangerous. Heavy rains caused local flooding. Storm moved eastward.
KANSAS Reno and Rice Counties	9	10:10-11:30 p.m.				1			Wind	11-year old girl injured by falling tree.
KANSAS Kingman County	9	Evening							Wind	Large barn and other small buildings destroyed or damaged by wind squall that had some tornadic characteristics in north-central part of County. Windows blown out and loud roar heard.
	9									Minor storms also reported in southeastern Butler County and at Chanute, Kans.
KANSAS Inman (4 miles west and 4-1/2 miles north of), McPherson County	11	Late afternoon			1				Electrical	Lightning struck and instantly killed man hauling grain from field. Bundle rack set on fire.
KANSAS Neosho, Franklin, Anderson, and Woodson Counties	11	Night			0	0			Wind, electrical, and tornado	Broken trees from high winds damaged power- and telephone lines in various localities over these counties. Near Yates Center, severe winds blew barn onto powerline. Lightning also caused some power outages. Storm moved northeastward.
	11									Minor storms also reported at Paola and Ft. Scott, Kans.
KANSAS Hamilton County	12-13								Hail	Hail damaged the few remaining good fields of wheat north of Syracuse. Some fields damaged up to 90 percent. Several streaks of hail occurred these 2 days.
	13									Minor storms also reported at Graham and Gove Counties, Kans.
KANSAS Bonner Springs, Johnson County	14	5 a.m.							Electrical	House and contents complete loss from fire after being struck by lightning.

See footnotes at end of table.

JUNE 1957 (Cont'd.)										
KANSAS Coffeyville, Montgomery County	14	10 a.m.				1			Electrical	Lightning struck 90-foot flagpole and injured man standing nearby.
	14									Minor storm also reported at Coffeyville, Kans.
KANSAS Gove and Sheridan Counties	15	Evening			0	0			Wind and tornado	A number of farm buildings damaged by severe winds over northern Gove and southern Sheridan Counties. Small tornado left damaged path from 6-1/2 miles northwest of Quinter to 10 miles north of town.
	15									Minor storm also reported at Dellvale, Kans.
KANSAS Finney County	16	Afternoon			0	0			Tornadoes, wind, hail, and rain	About midafternoon 2 tornadoes observed to touch ground for a few minutes in open country about 20 miles northwest of Garden City. Severe winds caused considerable damage over County, especially to trees and T.V. antennas. Some hail and washing rains also caused damage.
	18									Minor storms reported at Maryville and LeRoy, Kans.
KANSAS Stanton County	19	7:10-7:35 p.m.	12	*2				5	Hail	Hailstones ranging from pea to marble size fell across northeastern portion of County; accumulated to more than 1 foot deep. Storm moved southeastward.
KANSAS Seward and Meade Counties	21	4-5 p.m.							Wind, hail and dust	Thunderstorm brought rather severe winds and hail in strips over these Counties. Damage from hail ranged from 20 percent to entire loss of crops. Stones up to 1-1/2 inches in diameter found. Wind damaged a number of farm buildings. Duststorm followed thunderstorms within 2 hours.
	21									Minor storms also reported at Bremer and Syracuse and in Dickinson, Logan, McPherson, Russell, and Trego Counties, Kans.
KANSAS Hamilton County	22	Night							Hail and rain	Several thousand acres of crops damaged by hail. Washing rains necessitated replanting of crops.
KANSAS Southwestern portion	22	Night							Hail, wind, and rain	Hail and wind damages of light to moderate intensities reported over Morton, Stevens, Meade, Comanche, and Finney Counties. Some wheat damaged 70 percent. Heavy rains washed fields and mud covered highways. Water stopped rail traffic near Garden City.
KANSAS Winkler (near), Riley County	22				0	0			Electrical	Large barn struck by lightning and burned. Several head of livestock also lost.
	22									Minor storm also reported at La Crosse, Kans.
KANSAS Stevens, Gray, Haskell, and Clark Counties	23	1-3 a.m.			0	0			Wind, tornado, hail, and rain	Thunderstorm resulted in some damage to buildings and power- and telephone lines from wind, and crop losses from hail and heavy rains. Tornado observed east of Copeland, Gray County, by aid of lightning. It took out 14 powerline poles and destroyed windmill.
KANSAS Sharon Springs (near), Wallace County	23	Midafternoon							Hail	Hail damaged local area. Stones as large around as half dollar numerous. Gardens, automobiles, and windows suffered most damage.
	23									Minor storm also reported south of Sterling, Kans.
KANSAS Kingman (13 miles south of), Kingman County	25	Night							Electrical	Lightning struck and set fire to crude-oil storage tank. In all, 4 tanks burned as 1 caught fire from the other. 2,400 barrels of oil consumed.
KANSAS Kingman (7 miles south of), Kingman County	26	Early morning							Electrical	8-room house burned, with loss of house and contents after being struck by lightning.
	26									Minor storms also reported in southwestern Lane County and at Cedarvale and Solomon, Kans.

See footnotes at end of table.

4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

SEPTEMBER 1957

The most significant flooding during September occurred in the smaller tributaries of the middle and upper portions of the San Antonio and Guadalupe Rivers during the latter part of the month. Flooding elsewhere was minor and sparse.

ATLANTIC SLOPE DRAINAGE

Minor flooding occurred in the upper Roanoke Basin in Virginia between the 17th and 19th from heavy rain between the 15th and 19th. Another period of heavy rain from September 28 through October 1 caused minor flooding on the lower Cape Fear River from October 2 through the 4th. No damages were reported.

Heavy rainfall on the 17th and 18th caused the Yadkin River at Yadkin College, N.C., to reach bankfull stage on the 18th. The river at this point rose from a stage of 1.5 feet on the 16th to 20 feet on the 18th. Some low farmland in the vicinity was flooded but no damage was reported. Below Yadkin College the reservoirs were able to contain and regulate the flow so no substantial rise occurred.

General rains totaling 2 to 3 inches over portions of the Saluda watershed and 3 to 4 inches over the upper reaches of the Broad River in South Carolina on the 16th and 17th resulted in light flooding in the headwaters of the Saluda and near bankfull stage on the Broad River. The Santee at Rimini, S.C., rose slowly during the month, reaching flood stage on the 16th, and remained above flood stage the remainder of the month. No damage resulted.

EAST GULF OF MEXICO DRAINAGE

Heavy rainfall accompanying tropical storm Esther on the 18th resulted in flash floods in southwest Alabama. Several small streams in the Millers Ferry, Ala., area were reported in flood. Hundreds of head of livestock were saved through timely warnings. Property damage from local flooding was minor.

Precipitation at Montgomery, Ala., for the month of September totaled 9.55 inches, or about 300 percent of normal. This was the 4th highest September rainfall in 86 years of record, 1872-1957.

Heavy rainfall late in the month caused the Pearl River to overflow in the vicinity of Bogalusa, La., beginning on the 29th. No damage was reported.

Coastal streams in Mississippi were flooded due to heavy rains accompanying tropical storm Esther on the 18th. Tuxachanie Creek overflowed Highway 57 north of Biloxi, causing damage to roadbeds. Several residences in Biloxi were flooded from high water in Tchoutacabouffa Creek. Thompson Creek near Richton, Flint Creek near Wiggins, Big Creek south of Waynesboro, and Carters Creek at Beaumont were out of their banks, flooding pasture land, woodland, and some highways.

WEST GULF OF MEXICO DRAINAGE

Heavy rains (4 to 12 inches) during the afternoon and night of the 25th caused the Colorado River to exceed flood stage at Columbus, Tex., on the 26th. There was considerable flooding of lowlands from Columbus to the Gulf but no extensive damage was reported.

The flooding on the Guadalupe River in Texas from the 24th to October 1 was due to heavy rains (4 to 8 inches) on the 22d and 23d. Major flooding occurred in the smaller tributaries of the middle and upper portions of the San Antonio and Guadalupe Rivers and moderate flooding of some portions of the main streams. Considerable flash flooding occurred in the city of San Antonio and a short distance downstream and over the upper portions of the Medina River above the Reservoir. No flooding occurred over the middle and lower portions of the San Antonio River except over the flat lands below Goliad, Tex. Another rain of 2 to 4 inches over the San Antonio area on the 25th caused some additional local flooding. Some damage resulted to farm and grazing land, and to country roads and bridges over the upper portions of all the rivers. Streets and several houses in San Antonio were flooded. There was some damage to stranded automobiles in lower areas.

Heavy rain (4 to 6 inches) from September 21 through the 23d caused flooding on the Nueces River and tributaries in Texas between September 23 and October 5. Rainfall amounts of 4 to 6 inches were common with the greatest amount of 9 inches being reported from Bee County and upper portion of Medina County. Amounts along the coast from Corpus Christi southward ranged from 1 to 2 inches. Flooding was generally confined to farm and ranch lands with resulting little damage. Minor flooding occurred in the town of Beeville, with 60 automobiles completely covered at one time. Considerable damage was done to highways under construction in Atascosa County.

TROPICAL STORMS, SEPTEMBER 1957

Compiled by Howard C. Sumner

Weather Bureau

Washington, D. C.

Four tropical storms moved over the waters of the North Atlantic Ocean and the Gulf of Mexico during September 1957. The two that ran their course over the Atlantic both developed into storms accompanied by winds of full hurricane force, while no winds of that force were reported in connection with the two storms that formed over the Gulf of Mexico. Both of the Gulf storms did, however, reach the coastline of the United States and for that reason both Debbie and Esther are summarized in detail. The tracks of these two tropical storms are shown on Figure 1.

TROPICAL STORM DEBBIE SEPTEMBER 7-9, 1957

Tropical storm Debbie developed on the morning of September 7 as a weak circulation on an easterly wave that had been observed for several days moving across the northern Gulf of Mexico. The storm moved northeastward at about 15 m.p.h. and intensified somewhat before it moved inland near Fort Walton, Fla., at about 10 a.m. (c.s.t.) on the morning of the 8th. Debbie, however, never became a severe storm. The center continued northeastward across southeastern Alabama and into Georgia with decreasing intensity. By noon of the 9th the pressure and wind patterns had become diffused and merged with other stronger weather systems.

During passage of the storm, winds of 30 to 40 m.p.h. were reported from stations along the track. The highest winds were reported from the Tampa-Tallahassee area with Tampa, Fla., reporting a peak gust of 52 m.p.h. from the south on the 8th. A low pressure of 1005 millibars (29.68 inches) was reported at Pensacola, Fla., at 5:30 a.m. (c.s.t.) on the 8th.

Varying precipitation amounts ranging as high as 11.26 inches at Wewahitchka, Fla., accompanied by tides 1 to 4 feet above normal, caused some local flooding, particularly in the vicinity of St. Marks, Fla., where flood waters reached the downtown area. Rains in Florida, Georgia, South Carolina, and Alabama in most instances were welcome as they filled lakes and ponds which were at low levels; and were for the most part more beneficial than damaging to growing crops. No deaths or severe injuries were reported as a result of this storm.

TROPICAL STORM ESTHER SEPTEMBER 16-19, 1957

A midlevel cyclonic circulation over Nicaragua on September 12 drifted northeastward and out over the southwestern Gulf of Mexico on the 15th. Tropical storm Esther formed under this circulation on the 16th and intensified during the first 24 hours of its existence, but did not reach hurricane force. Over the Gulf, the storm took on a northward drift of about 15 m.p.h. and was characterized by a central area of relatively light winds with a diameter of roughly 100 miles. Turning to a north-northeasterly direction the storm area reached the southeastern Louisiana coast about daybreak on the 18th and moved up the Mississippi Valley where it dissipated during the 19th.

The lowest pressure observed at a land station was 1003 millibars (29.62 inches) at New Orleans, La. A slightly lower pressure of 1000 millibars (29.53 inches) was reported by reconnaissance aircraft flying in the vicinity of Lat. 23.5°N., Long. 93°W. The highest observed wind occurred a considerable distance to the east of the storm track at Pensacola, Fla., where a maximum of 52 m.p.h. from the south and gusts to 75 m.p.h. were reported at the airport on the 18th. Mobile, Ala., recorded a fastest mile of 40 m.p.h., with peak gusts of 60 m.p.h. during the morning of the 18th.

Attendant squalls and heavy rains occurred in advance and to the east of the central storm area and continued along the Mississippi and Alabama coasts and near the mouth of the Mississippi River for some time after the central portion of the storm area had passed to the north. Heavy rains from Esther began on September 17 and continued through September 19. The heaviest reported was 18.11 inches at Quarantine, La., recorded between 9:10 a.m. on the 17th and 3:30 p.m. on the 19th. Other heavy falls in the area of excessive rains were 13.36 inches and 12.35 inches at Buras and Burrwood, La., respectively, and 12.74 inches and 11.12 inches at Van Cleve and Richton, Miss. Tides were generally 4 to 5 feet above m.s.l. along the Louisiana and Mississippi coasts east of the mouth of the Mississippi River. A high tide of 6.5 feet above m.s.l. was reported as occurring at 10:00 a.m. on September 18 at Gulfport, Miss.

Additional pressure, wind, precipitation, and tide values for selected stations are listed in Table 1.

Some flooding, caused primarily from the heavy rains, occurred through southeastern Louisiana, southern Mississippi, and along the Alabama coast. In the Buras, La., section breaks in the back levees, brought about by inflow from the Gulf of Mexico, resulted in considerable flooding. Although there was some damage to piers and small craft along the coast, property damage from winds and local flooding was generally minor and did not exceed a few hundred thousand dollars. Crop losses were more extensive and have been estimated at about $1 million; the greatest losses being in cotton, peanuts, and pecans. In Mobile and Baldwin Counties, Ala., an estimated 50 percent of the pecans were blown from the trees. In most sections the heavy rains were beneficial to agriculture since precipitation during the months of July and August had been much below normal throughout the general area.

No loss of life was directly attributable to the storm during its passage, but two persons were drowned later in a New Orleans canal and one person was electrocuted by a downed wire at Buras, La., the following day.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 7 obs., 31,538 m., -38.7°C.
2/ 10 mb., 6 obs., 31,107 m., -51.6 C.
3/ 10 mb., 7 obs., 31,403 m., -47.4 C.
4/ 10 mb., 12 obs., 31,285 m., -49.4°C.
5/ 10 mb., 13 obs., 31,443 m., -42.7°C.
7 mb., 5 obs., 33,808 m., -41.7 C.
6/ 10 mb., 12 obs., 31,429 m., -40.8 C.
7/ 10 mb., 10 obs., 31,423 m., -39.3°C.
8/ 10 mb., 15 obs., 31,590 m., -37.4°C.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 6 obs., 31,340 m., -42.3 C.
2/ 10 mb., 5 obs., 31,198 m., -51.3 C.
3/ 10 mb., 8 obs., 31,444 m., -42.1 C.
4/ 10 mb., 8 obs., 31,357 m., -43.6°C.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb , 7 obs , 31,533 m , -38.5°C

2/ 10 mb., 14 obs., 31,353 m., -47.6°C., 275 dir., 3.1 speed

15	17	28,812	-44.1		54	3.7

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 7 obs., 31,130 m., -51 7 C.
2/ 10 mb., 5 obs., 31,284 m., -44.2°C.
3/ 10 mb., 15 obs., 31,578 m., -41.9°C.
4/ 10 mb., 11 obs., 31,470 m., -39.6°C.
5/ 10 mb., 5 obs., 31,507 m., -40.2°C.
6/ 10 mb., 10 obs., 31,553 m., -41.1°C.

25	27	25,289	-50.1		87	30.1
20	26	26,754	-47.5		90	31.3
15	19	28,665	-44.2		89	34.2

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 9 obs., 31,441 m., -41.4°C.
2/ 10 mb., 18 obs., 31,502 m., -42.3°C.
7 mb., 9 obs., 33,897 m., -41.6°C.
5 mb., 5 obs., 36,240 m., -39.0°C.
3/ 10 mb., 7 obs., 31,282 m., -41.2°C.
4/ 10 mb., 14 obs., 31,491 m., -41.5°C.
5/ 10 mb., 8 obs., 31,296 m., -43.2°C.
6/ 10 mb., 10 obs., 31,471 m., -38.7°C.
7/ 10 mb., 13 obs., 31,298 m., -46.5°C.
7 mb., 7 obs., 33,580 m., -46.0°C.
5 mb., 5 obs., 35,668 m., -48.8°C.

1/ 10 mb., 12 obs., 31,568 m., -37.8°C.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

SEPTEMBER 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Solar radiation intensities, tabulated in langleys per minute on a surface normal to the direction of the sun.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

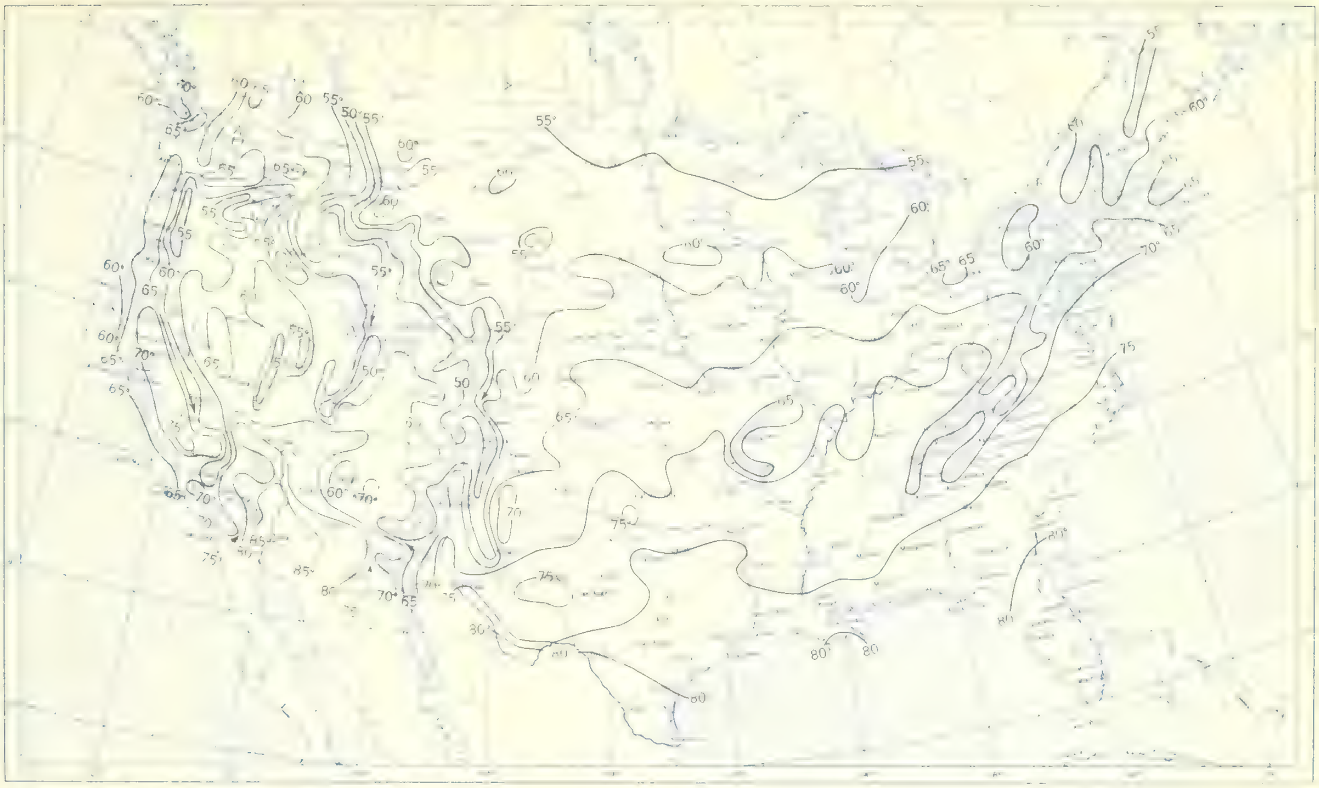
CHANGE IN CLIMATOLOGICAL CHARTS

Beginning on June 1, 1957, a change was made in surface observation times. This has had the following effect on the charts listed below. Charts not listed are not affected.

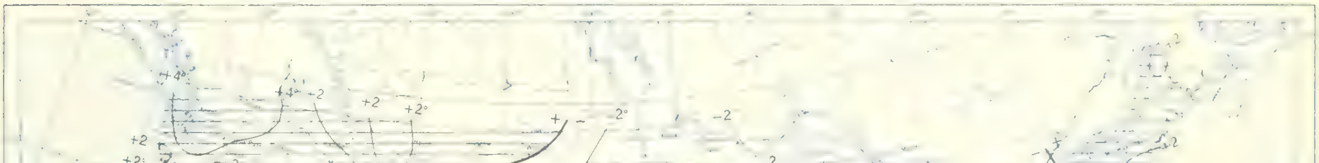
Chart V-B. Snow depth is now measured at 7 a.m. EST instead of 7:30.
Charts IX and X. Circle indicates cyclone and anticyclone positions at 7 a.m. EST instead of 7:30.
Chart XI. Average sea-level pressure is computed from the 7 a.m. and p.m. EST readings instead of 7:30 a.m. and p.m.
Charts XII-XVII. All the upper-air charts are now for 1200 GMT instead of 0300 GMT. All winds are based on rawinsonde observations. Use of pibal data has been discontinued in these charts.

USCOMM-WB-Asheville - 12/10/57 - 1850

Chart I. A. Average Temperature (F.) at Surface, September 1957.

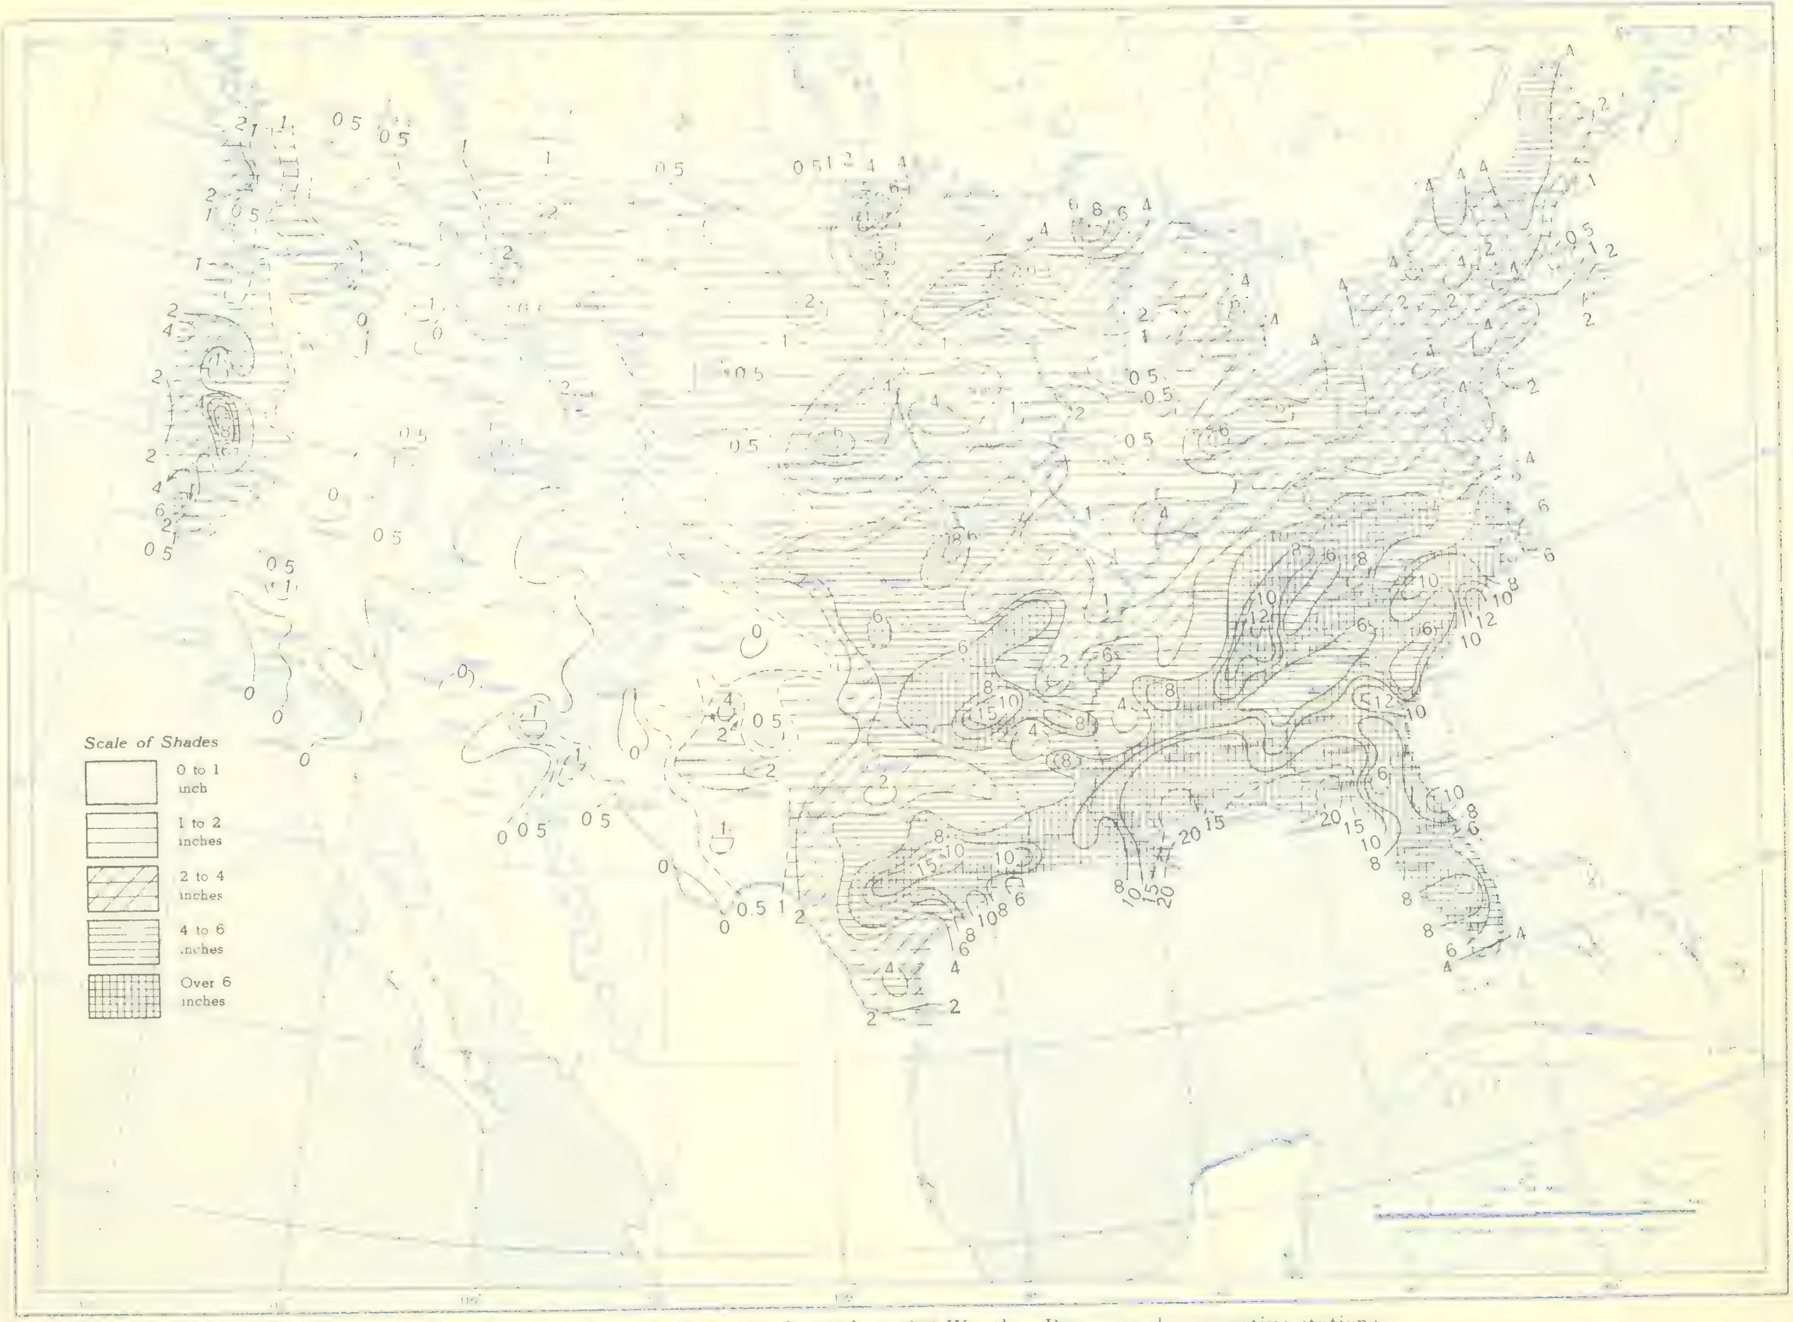


B. Departure of Average Temperature from Normal (°F.), September 1957.



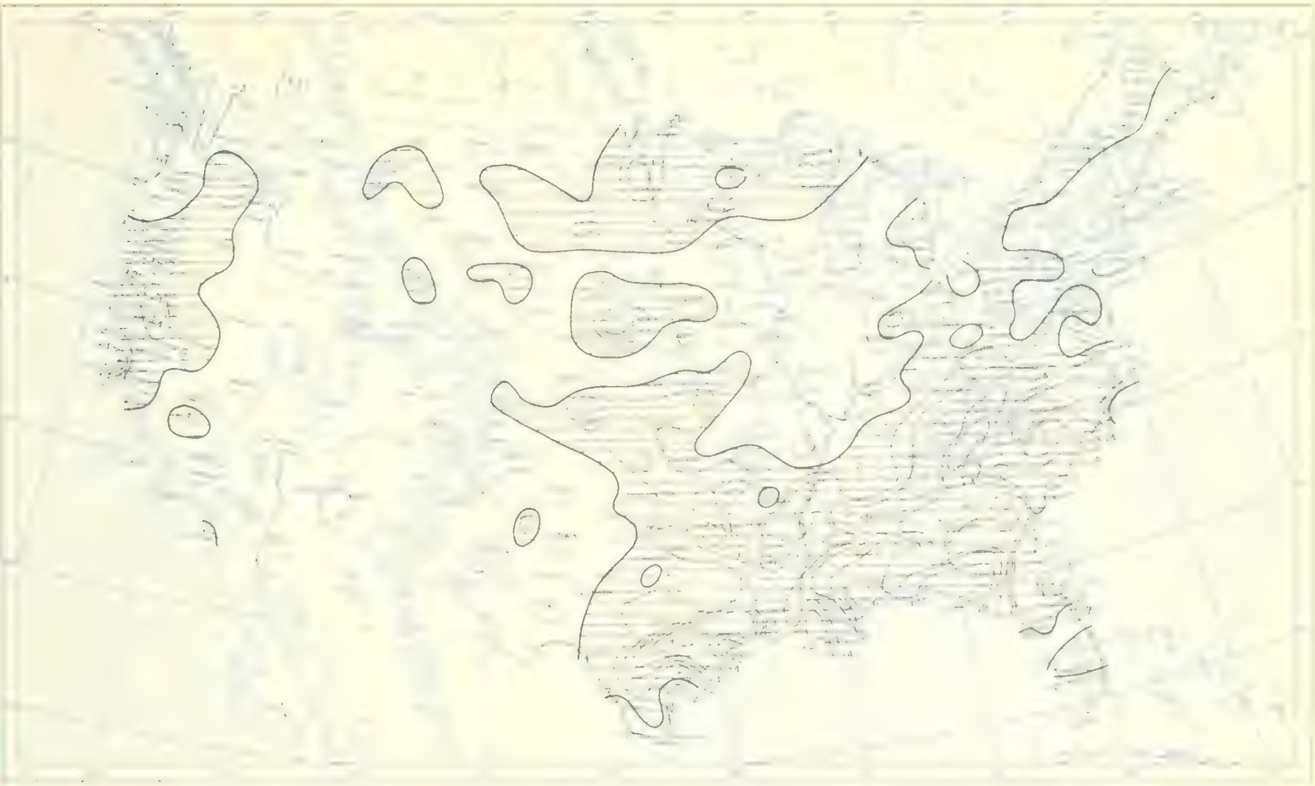
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), September 1957.

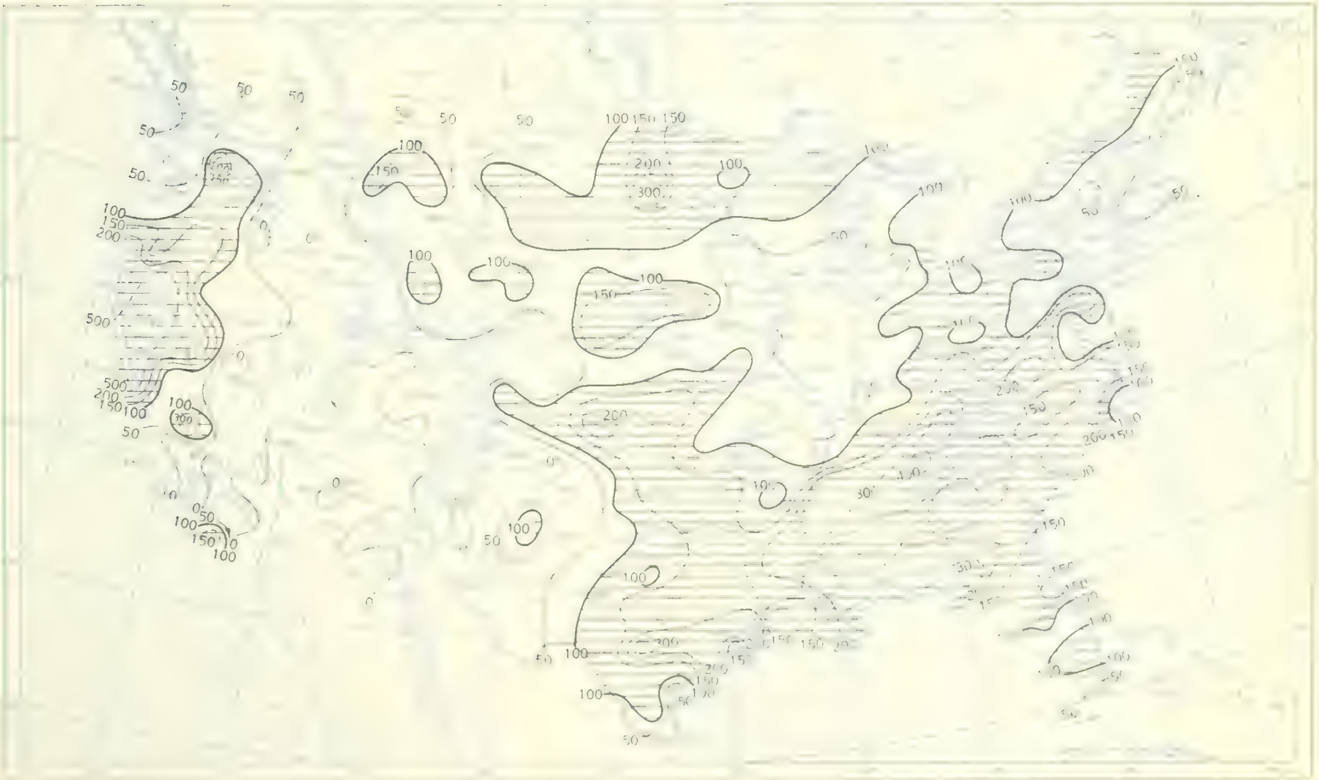


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), September 1957.

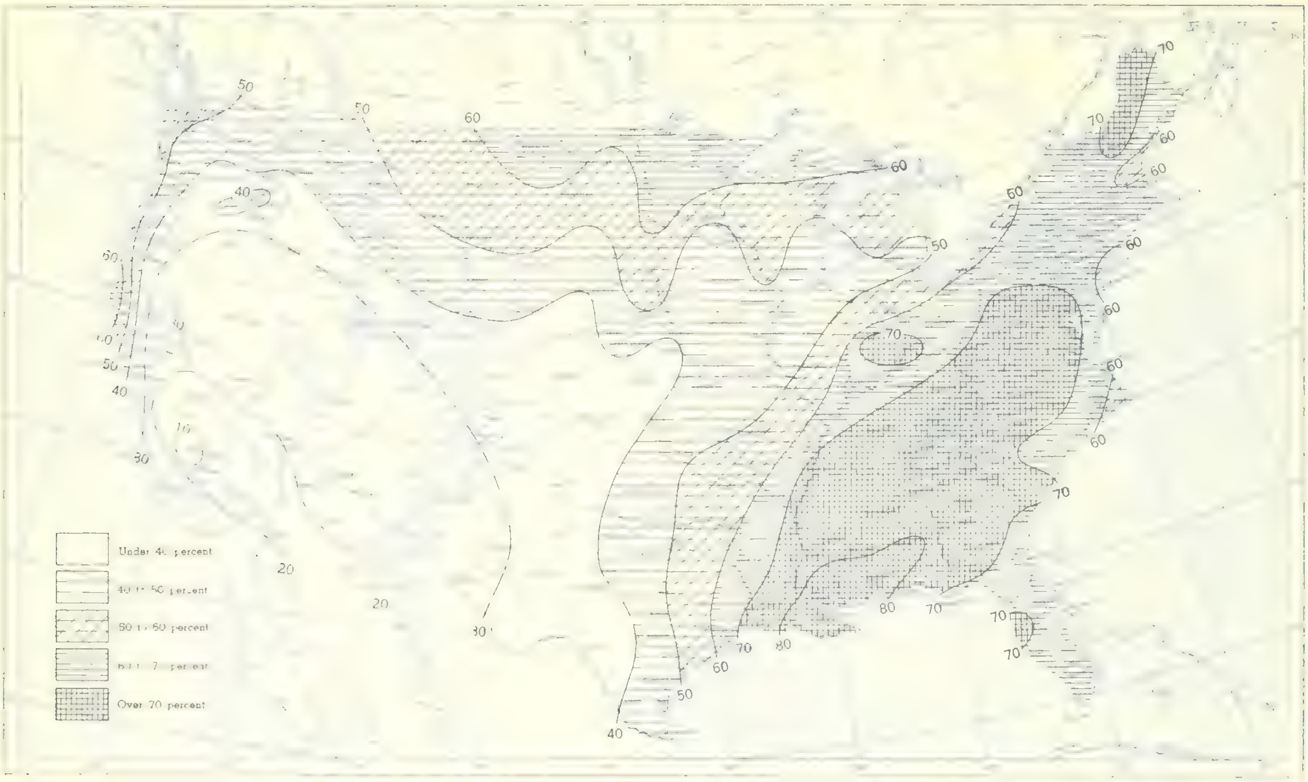


B. Percentage of Normal Precipitation, September 1957.

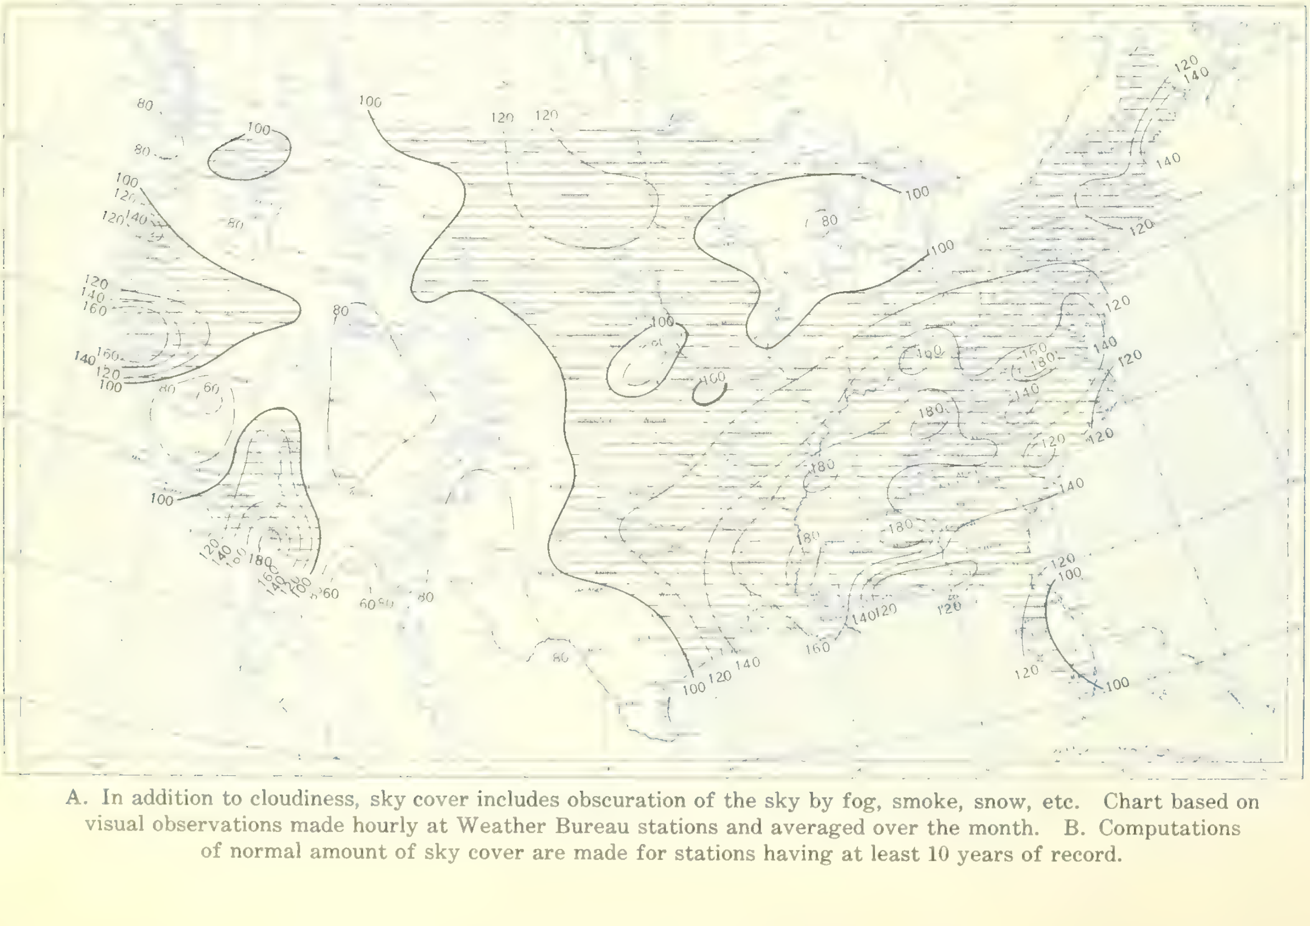


Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, September 1957.

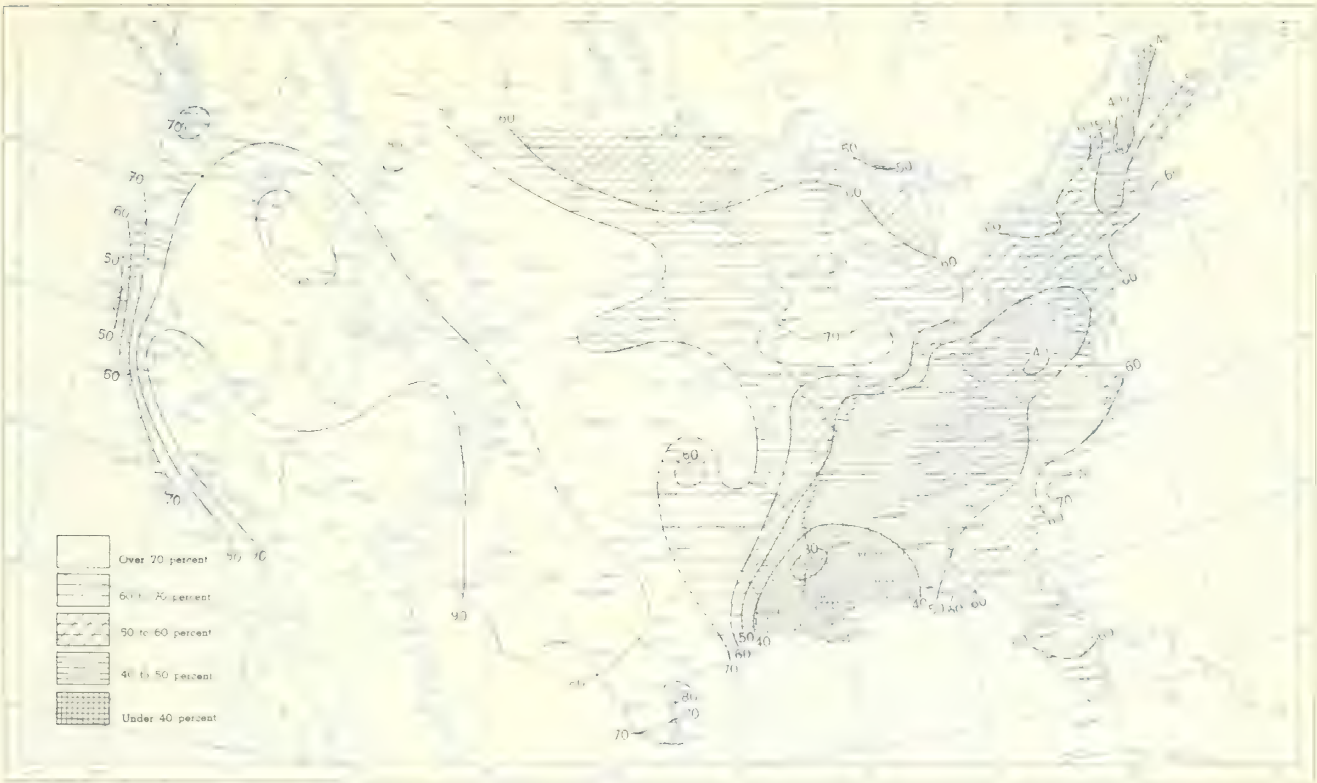


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, September 1957.

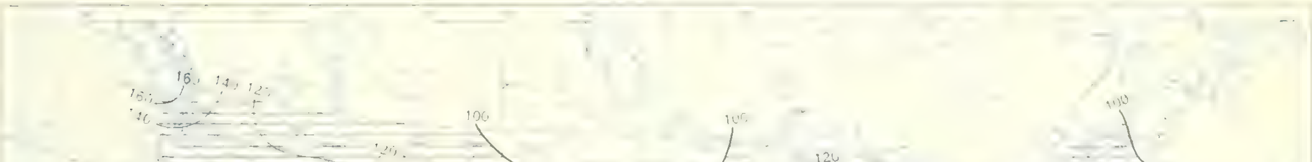


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, September 1957.



B. Percentage of Normal Sunshine, September 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, September 1957. Inset: Percentage of Mean Daily Solar Radiation, September 1957. (Mean based on period 1951-55.)

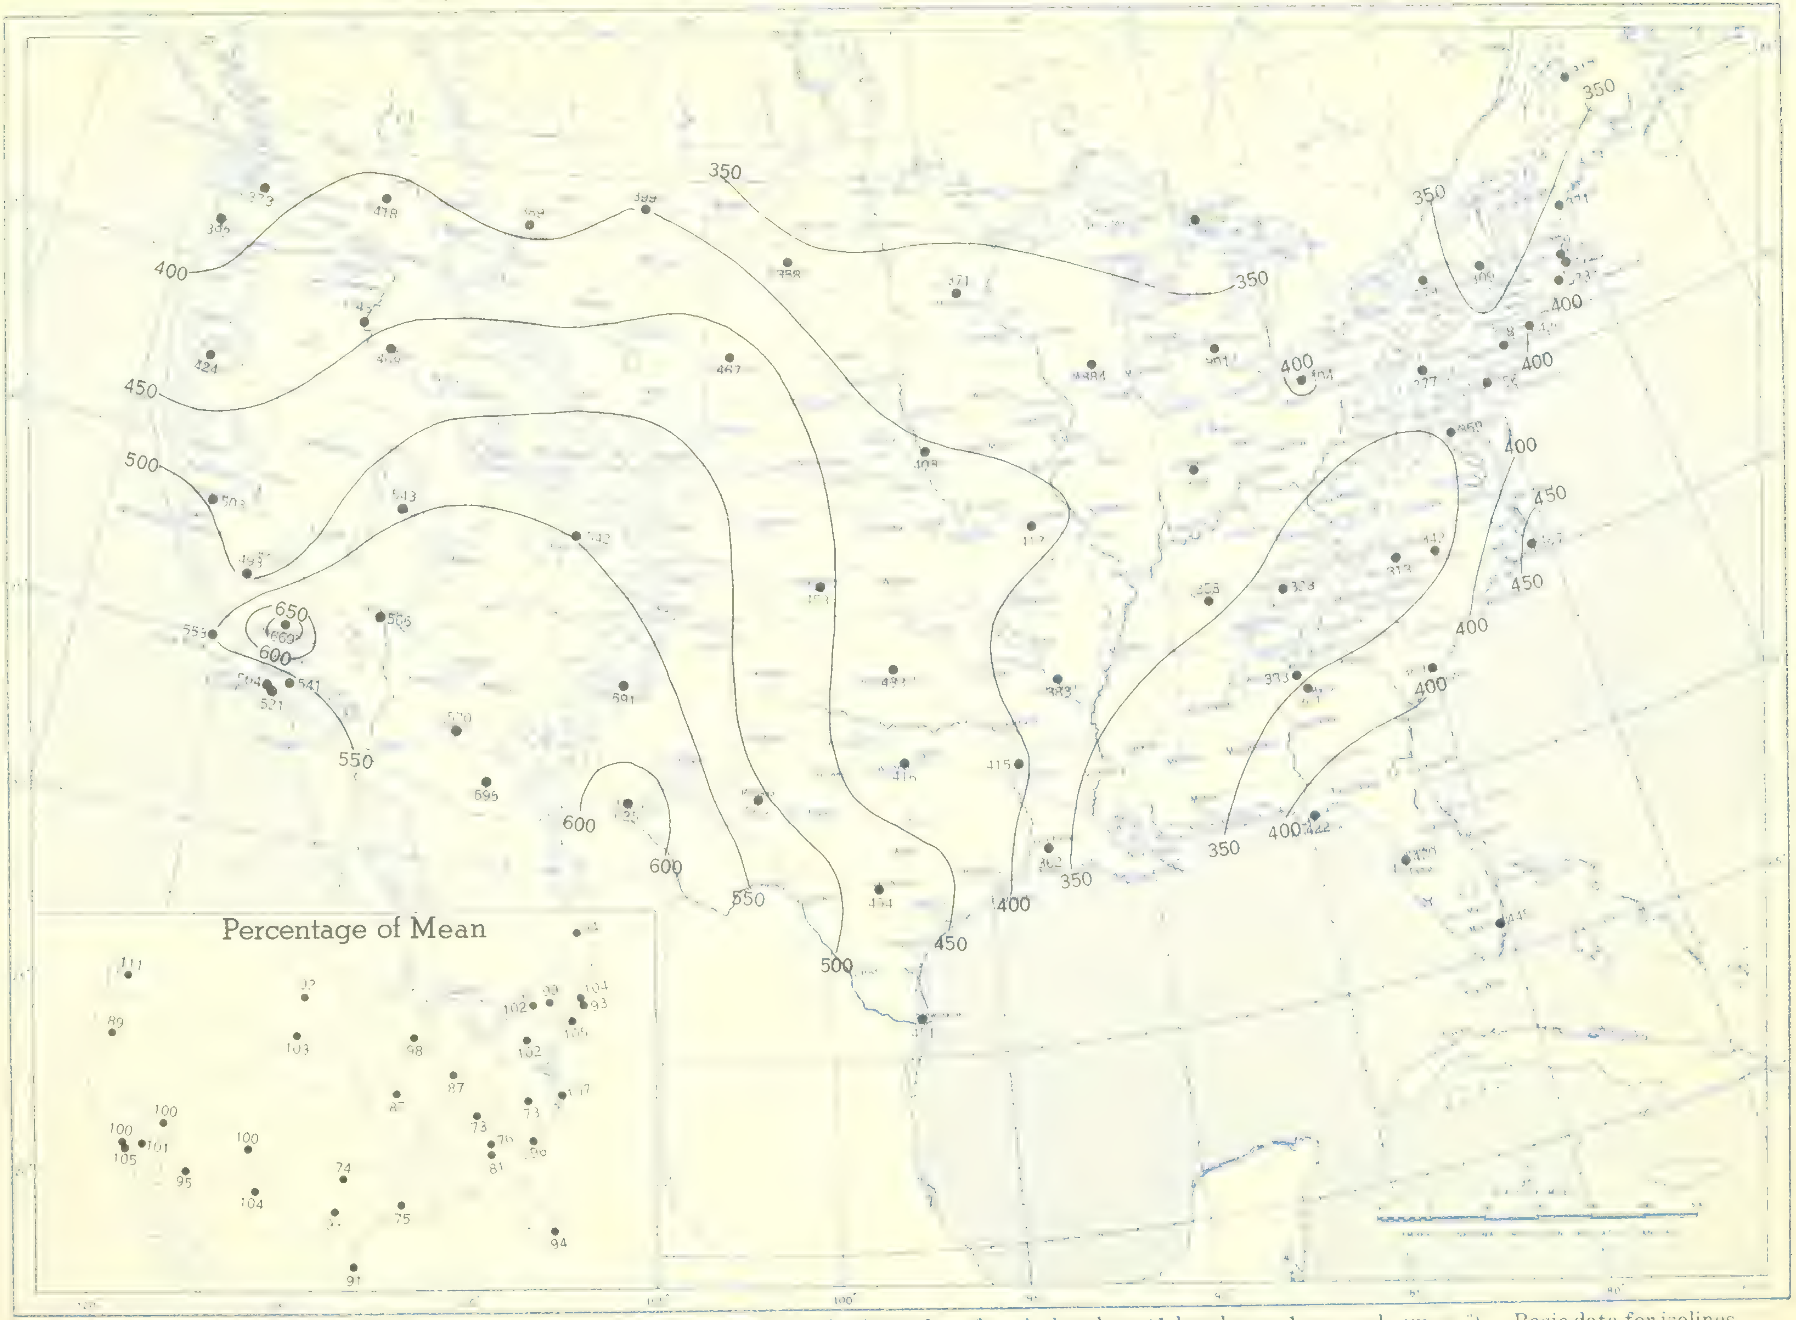


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

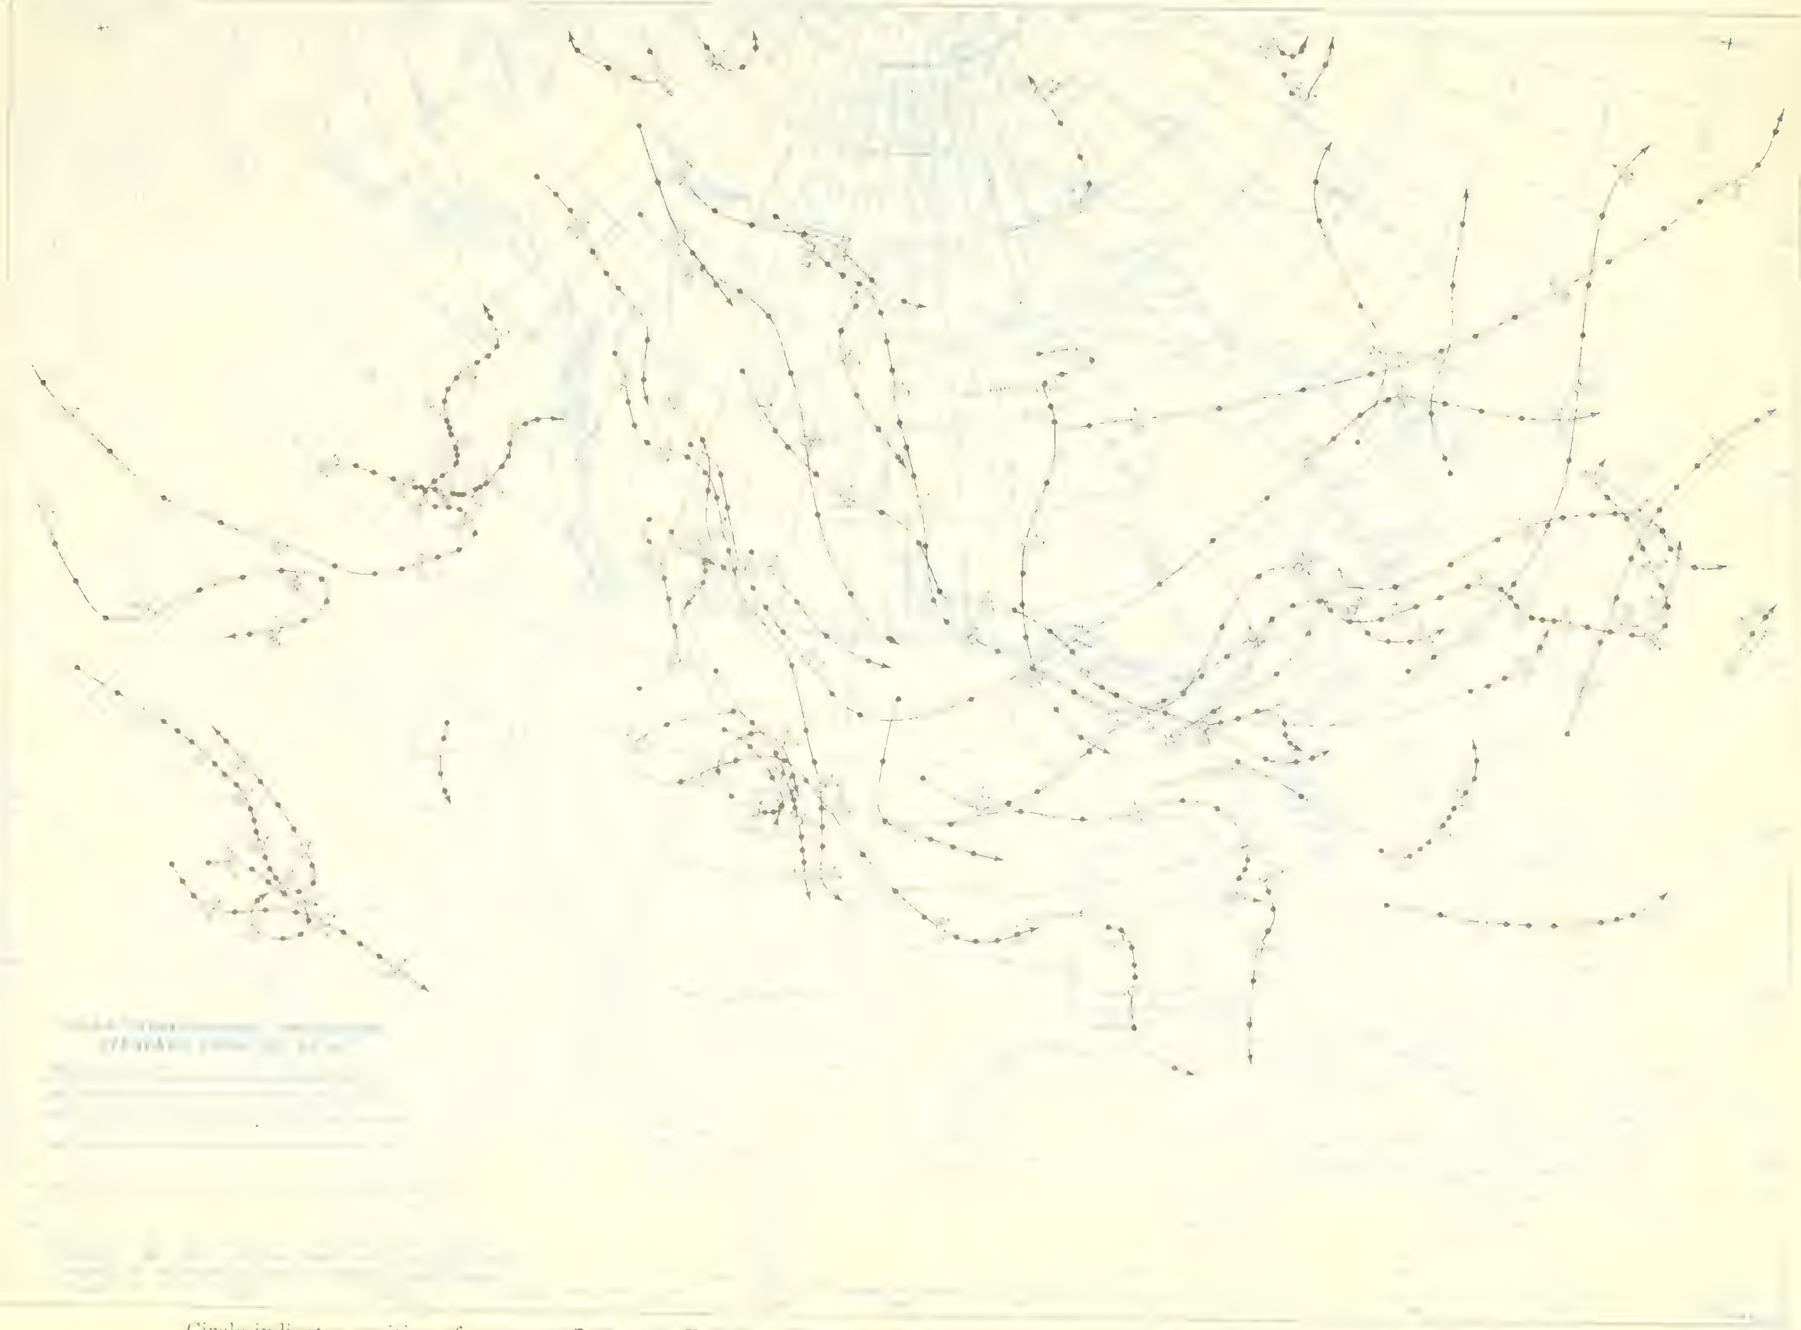
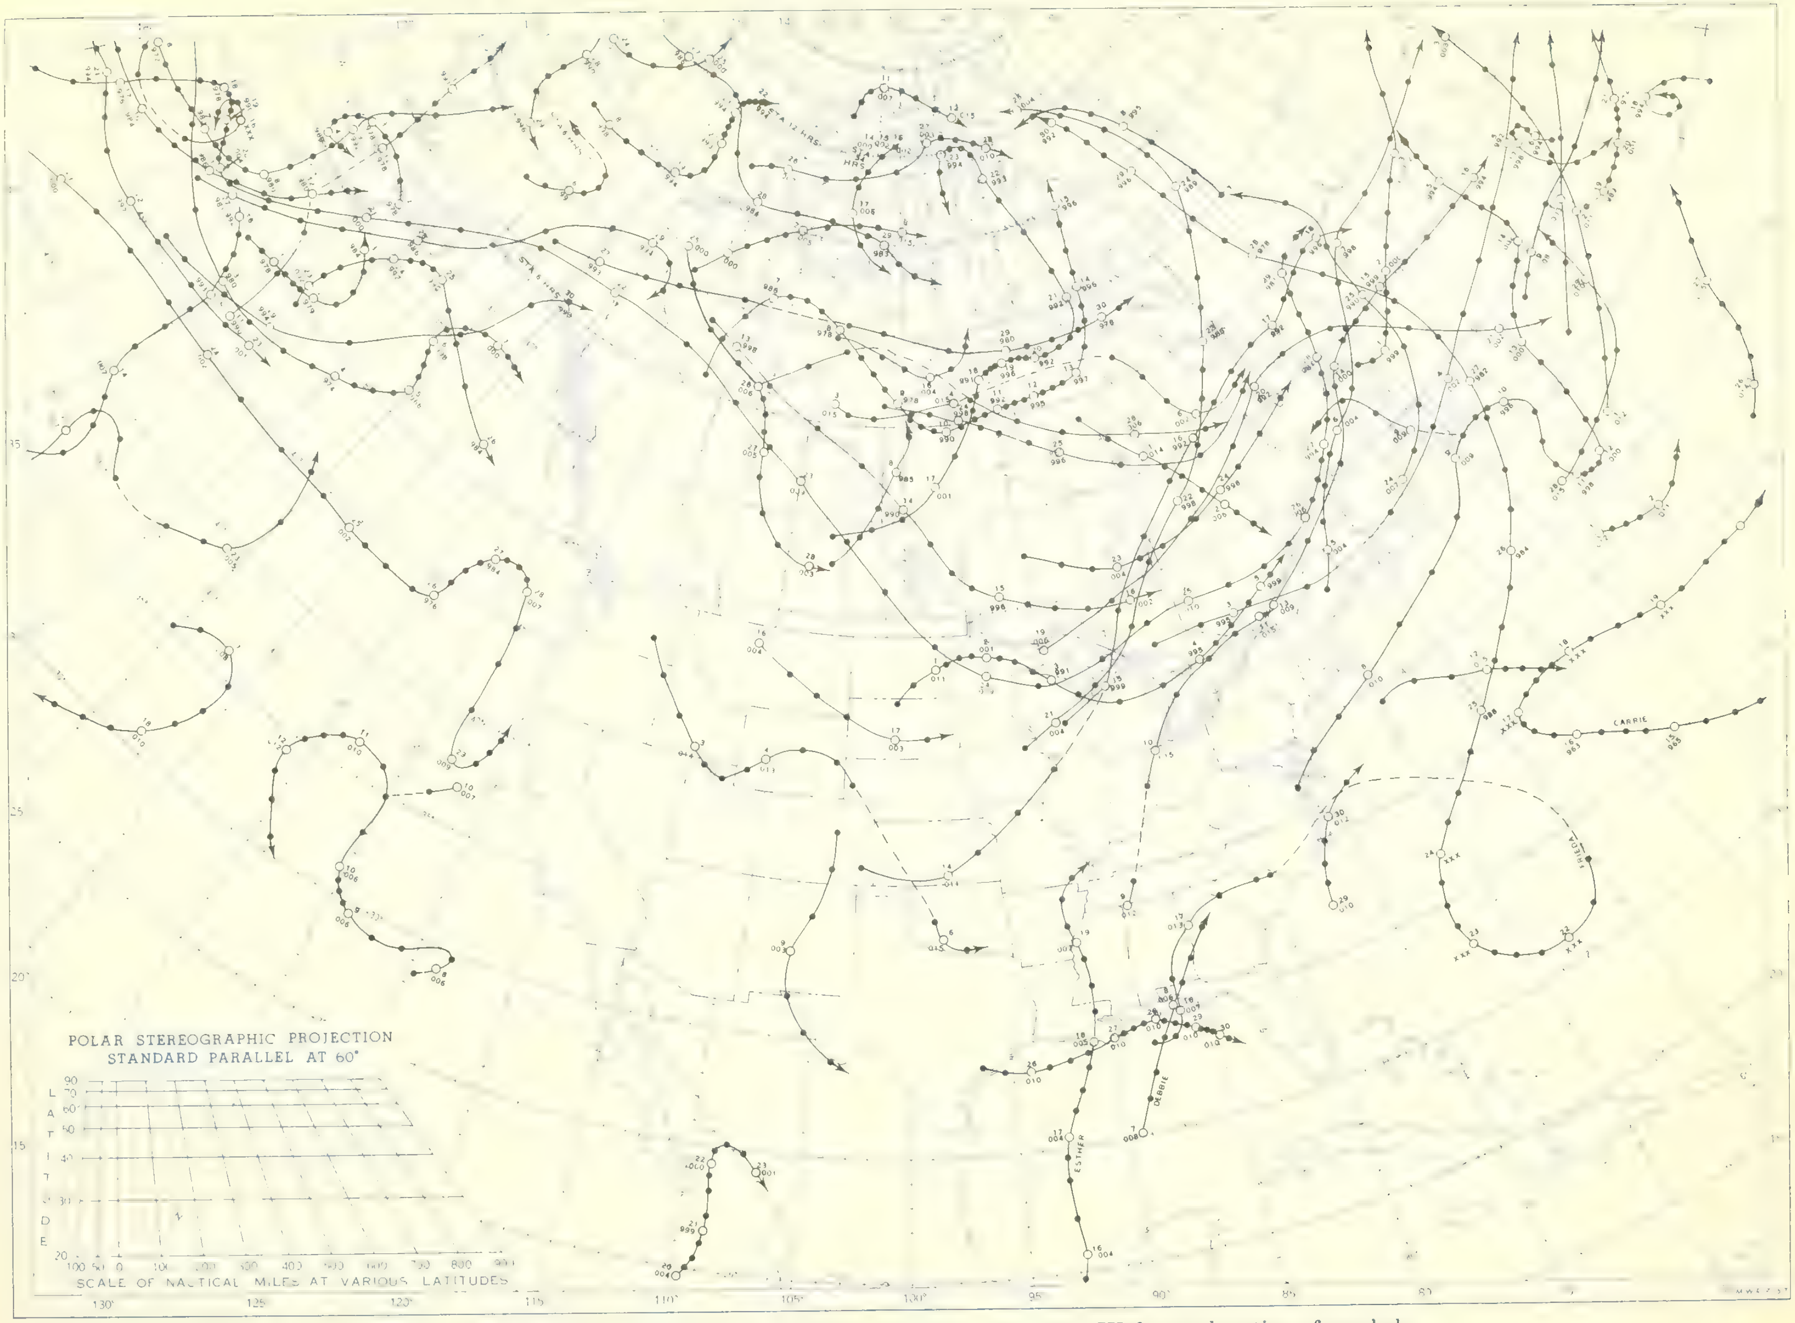
Chart IX. Tracks of Centers of Anticyclones at Sea Level, September 1957.



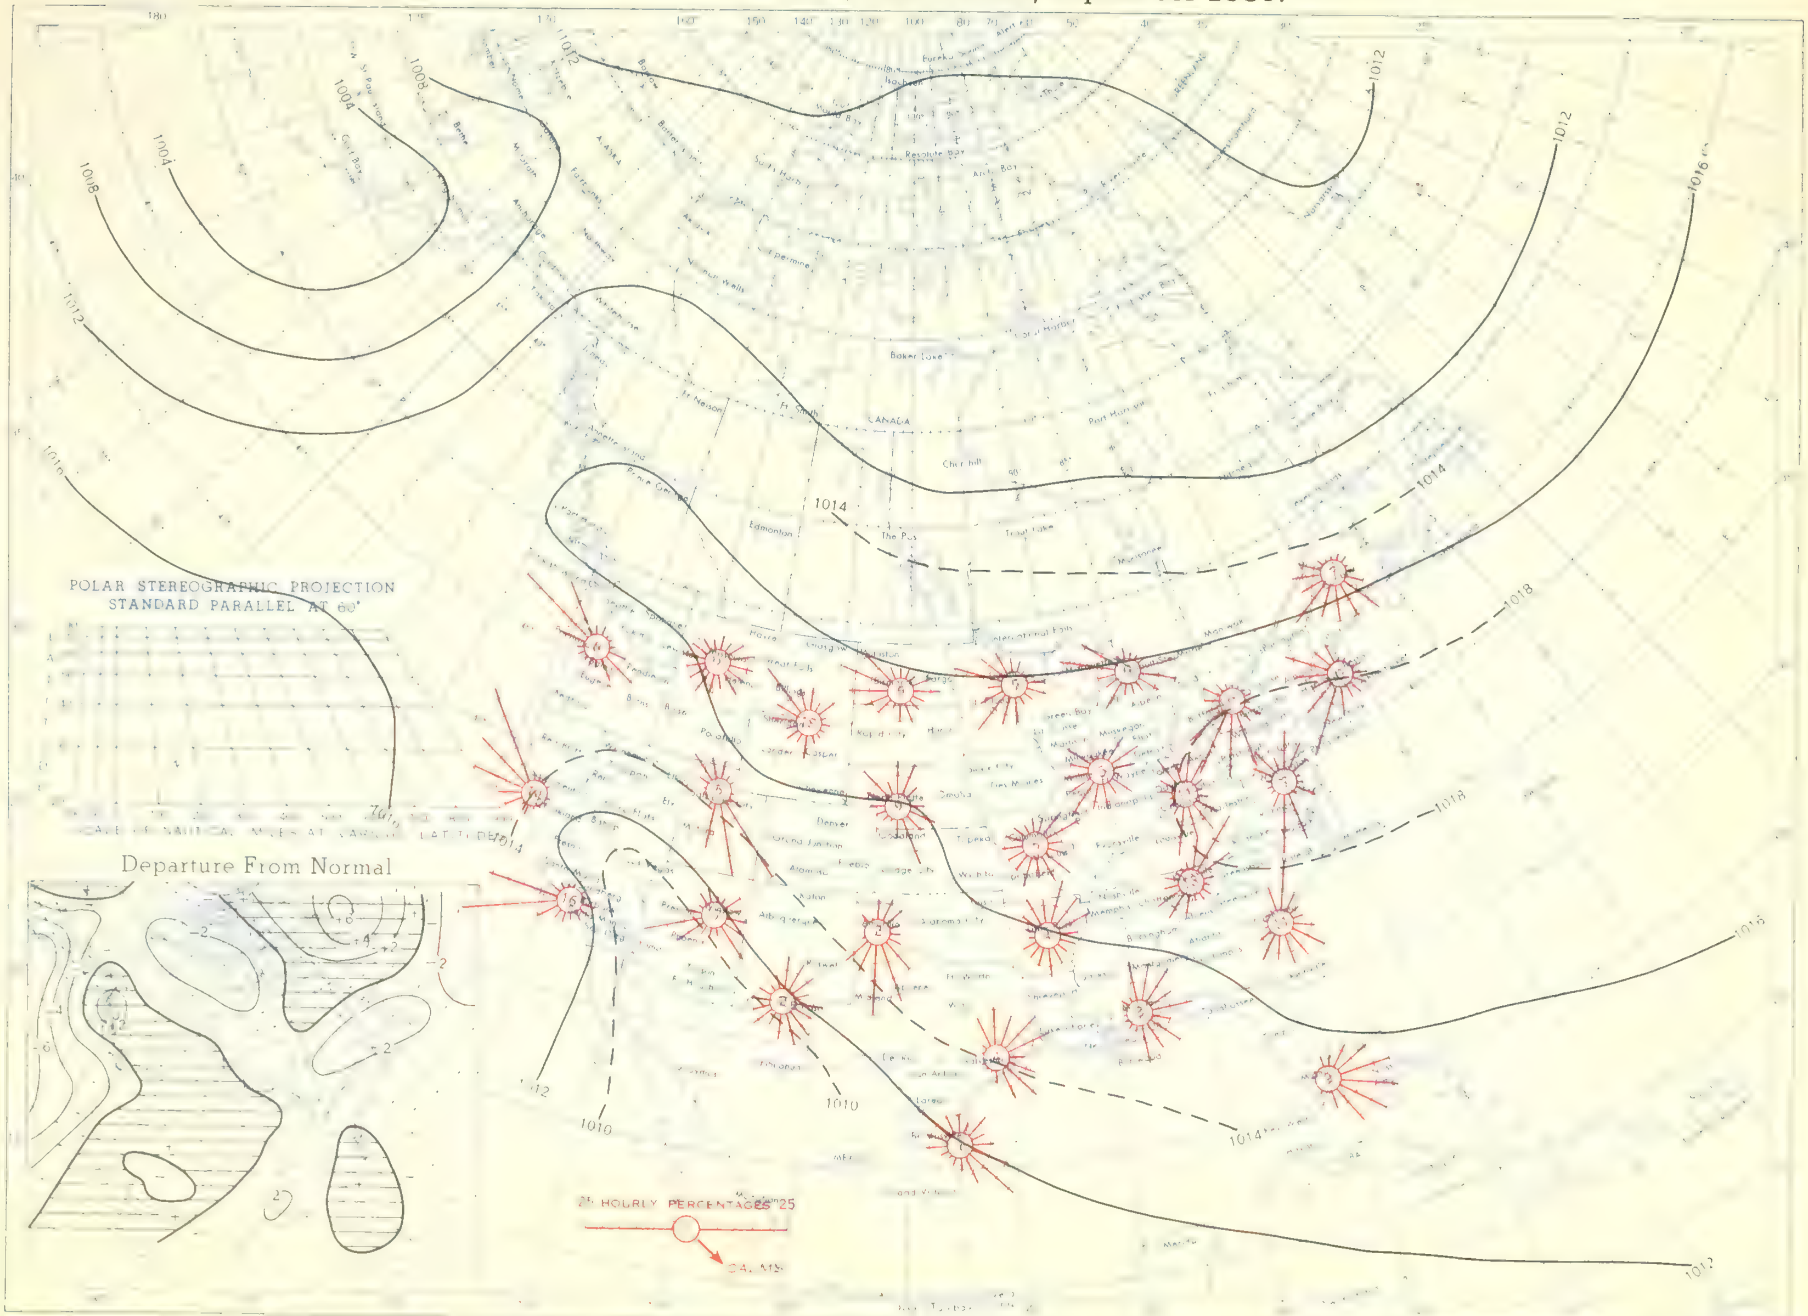
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track

Chart X. Tracks of Centers of Cyclones at Sea Level, September 1957.



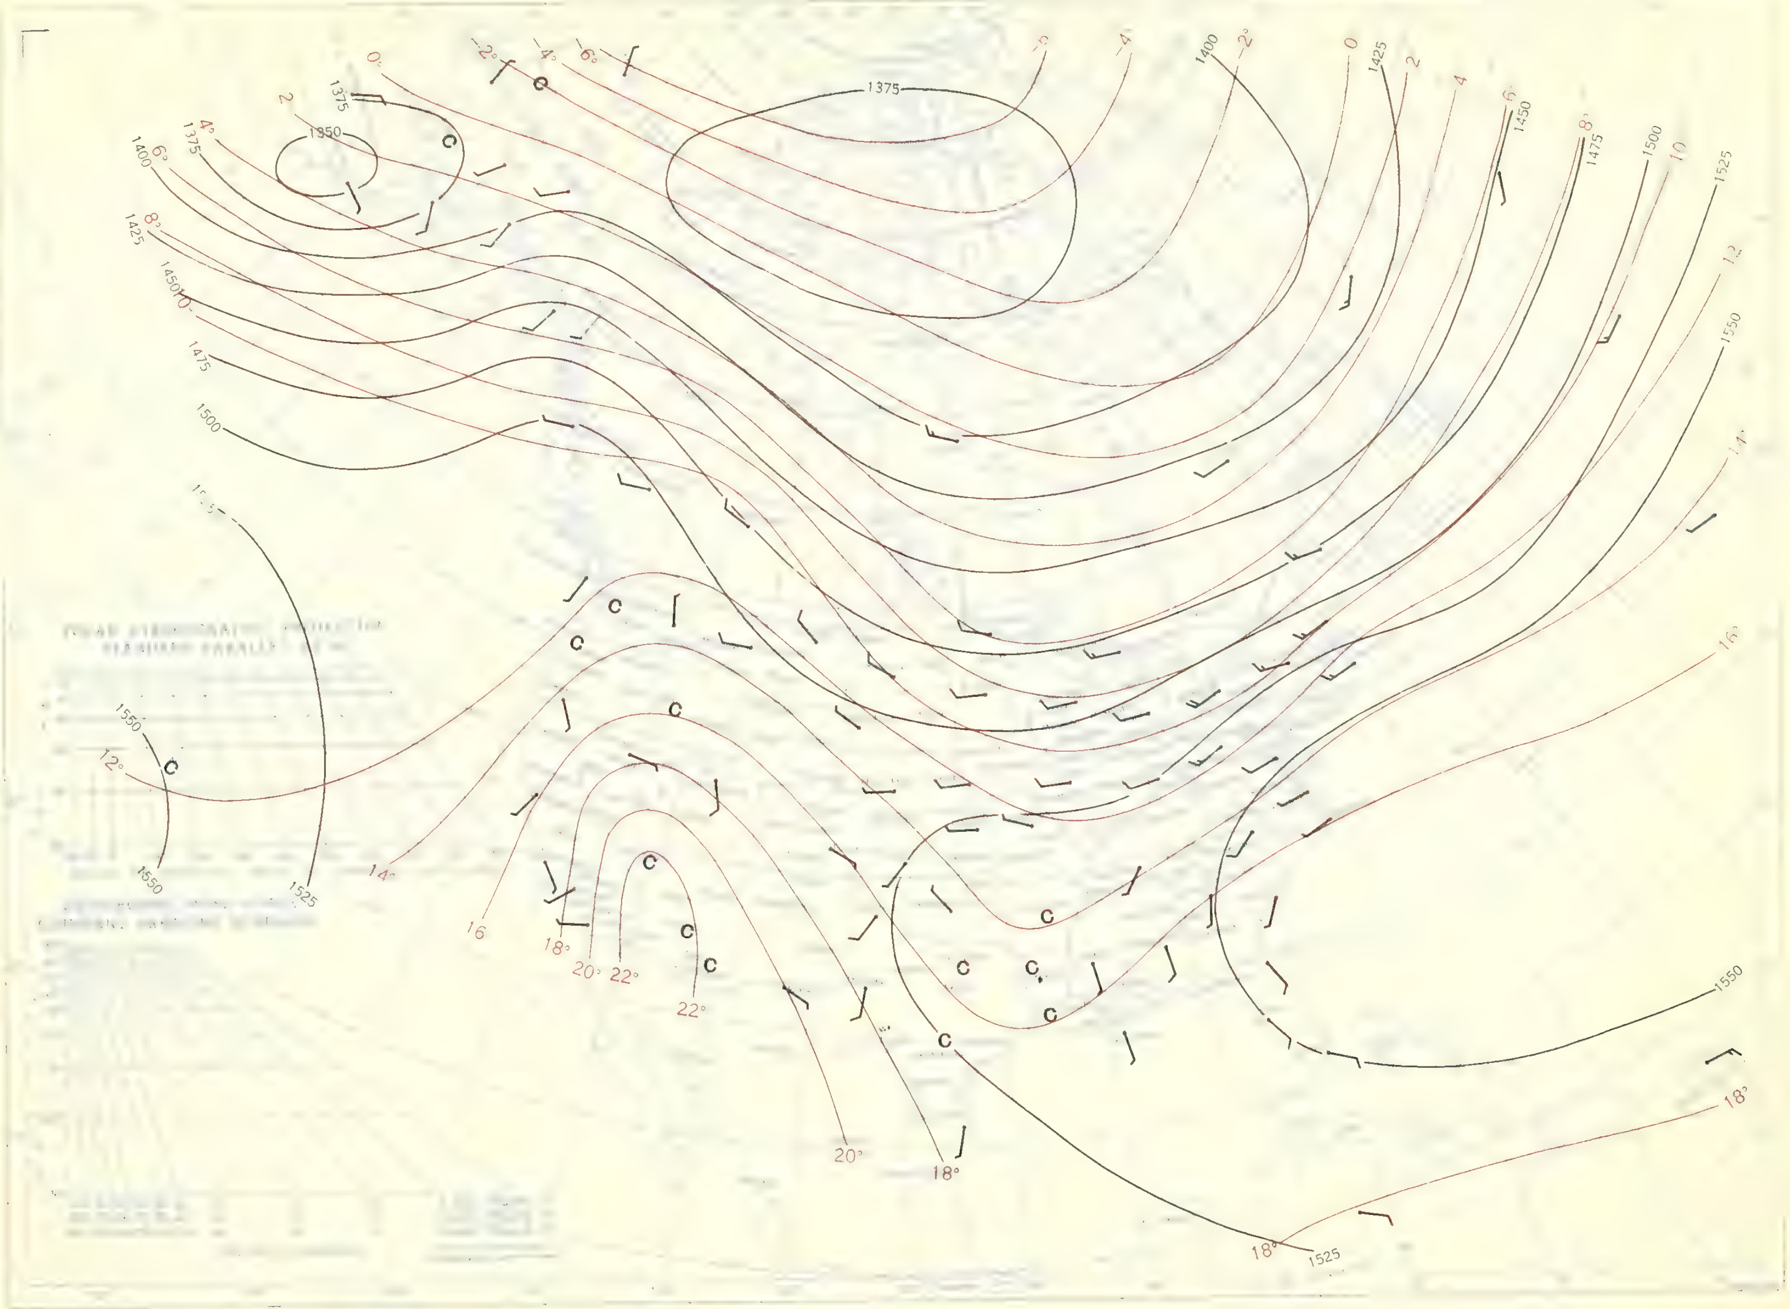
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, September 1957. Inset: Departure of Average Pressure (mb.) from Normal, September 1957.



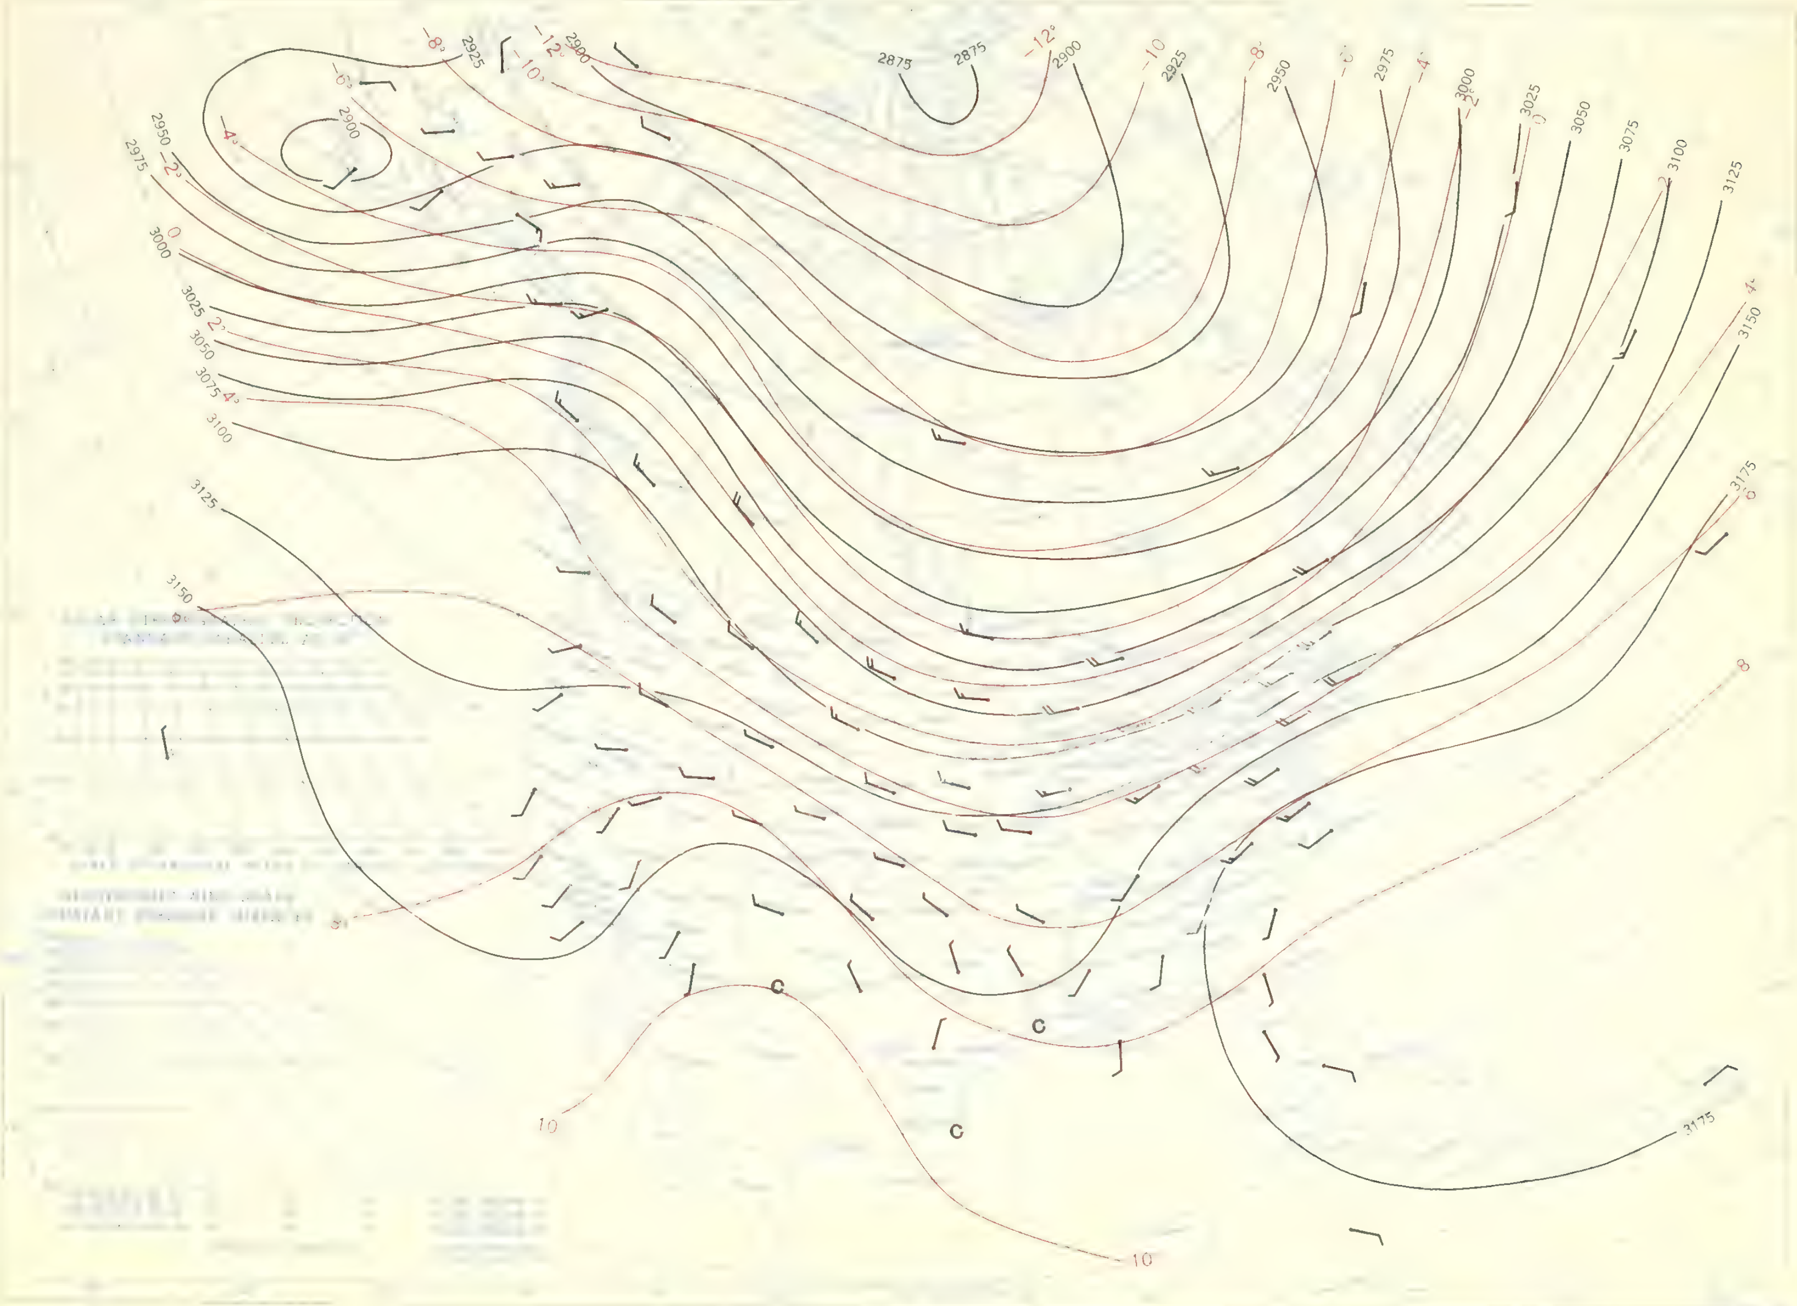
Average sea level pressures are obtained from the averages of the 7:00 a. m. and 7:00 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° inter-

Chart XII. 850-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



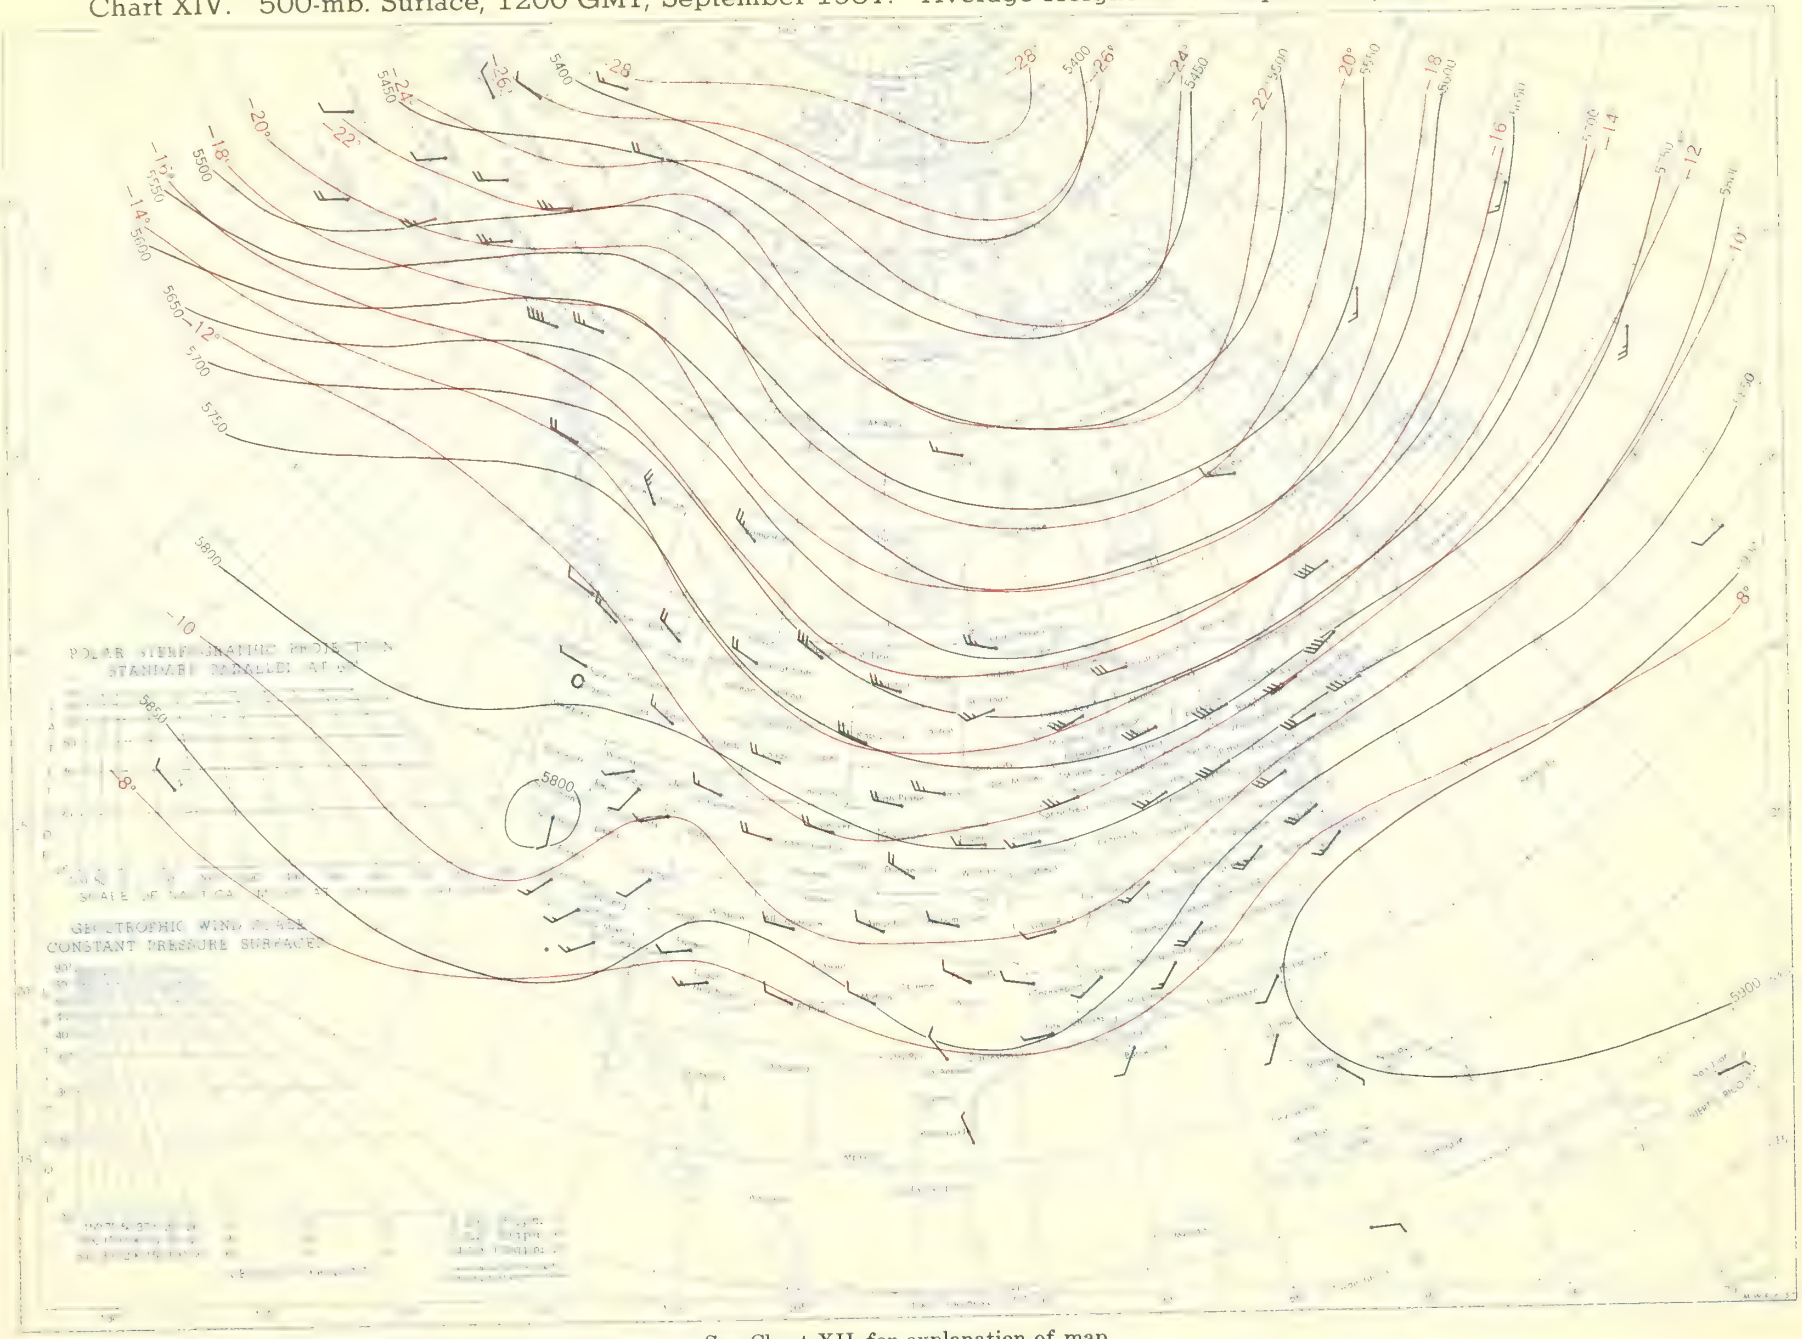
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



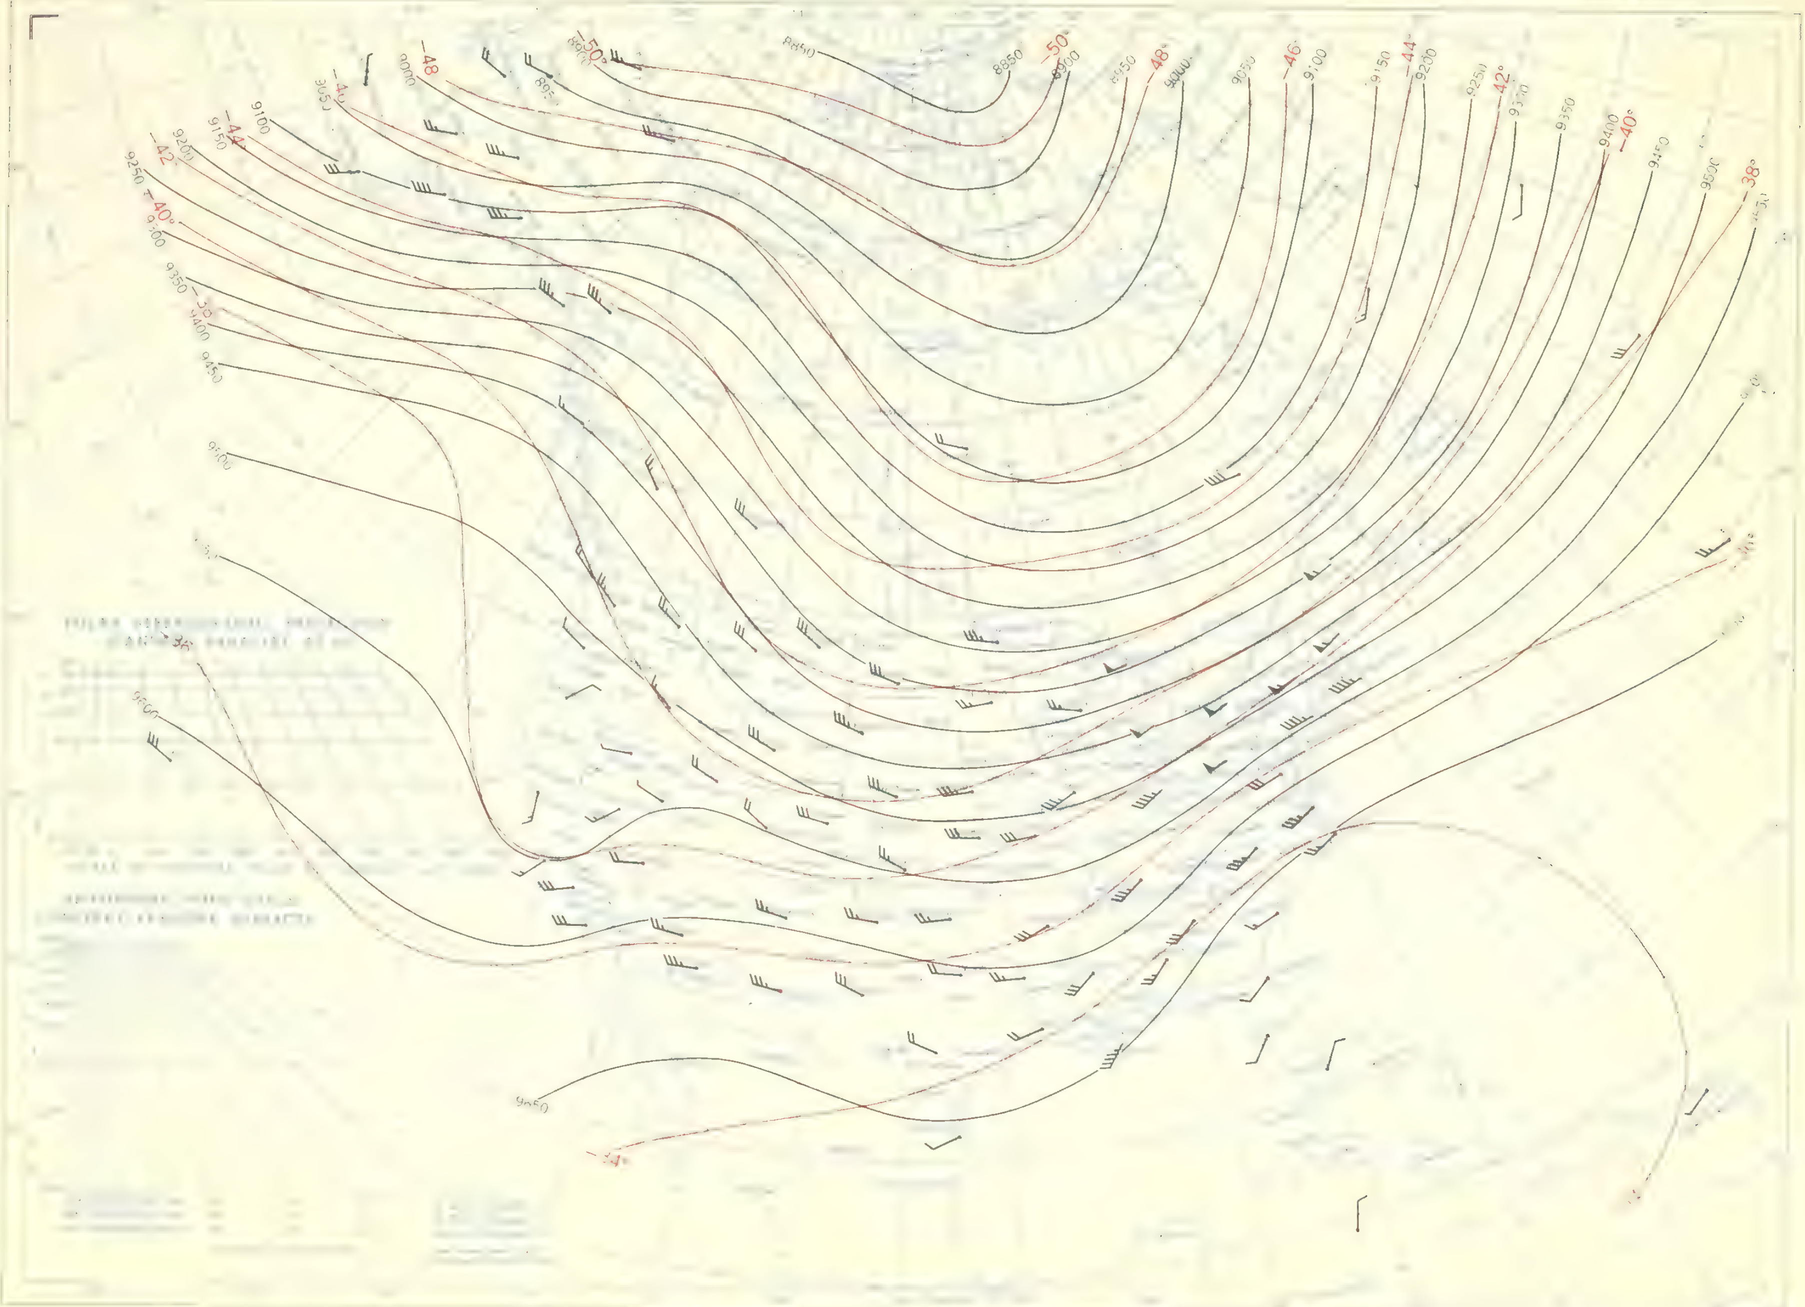
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



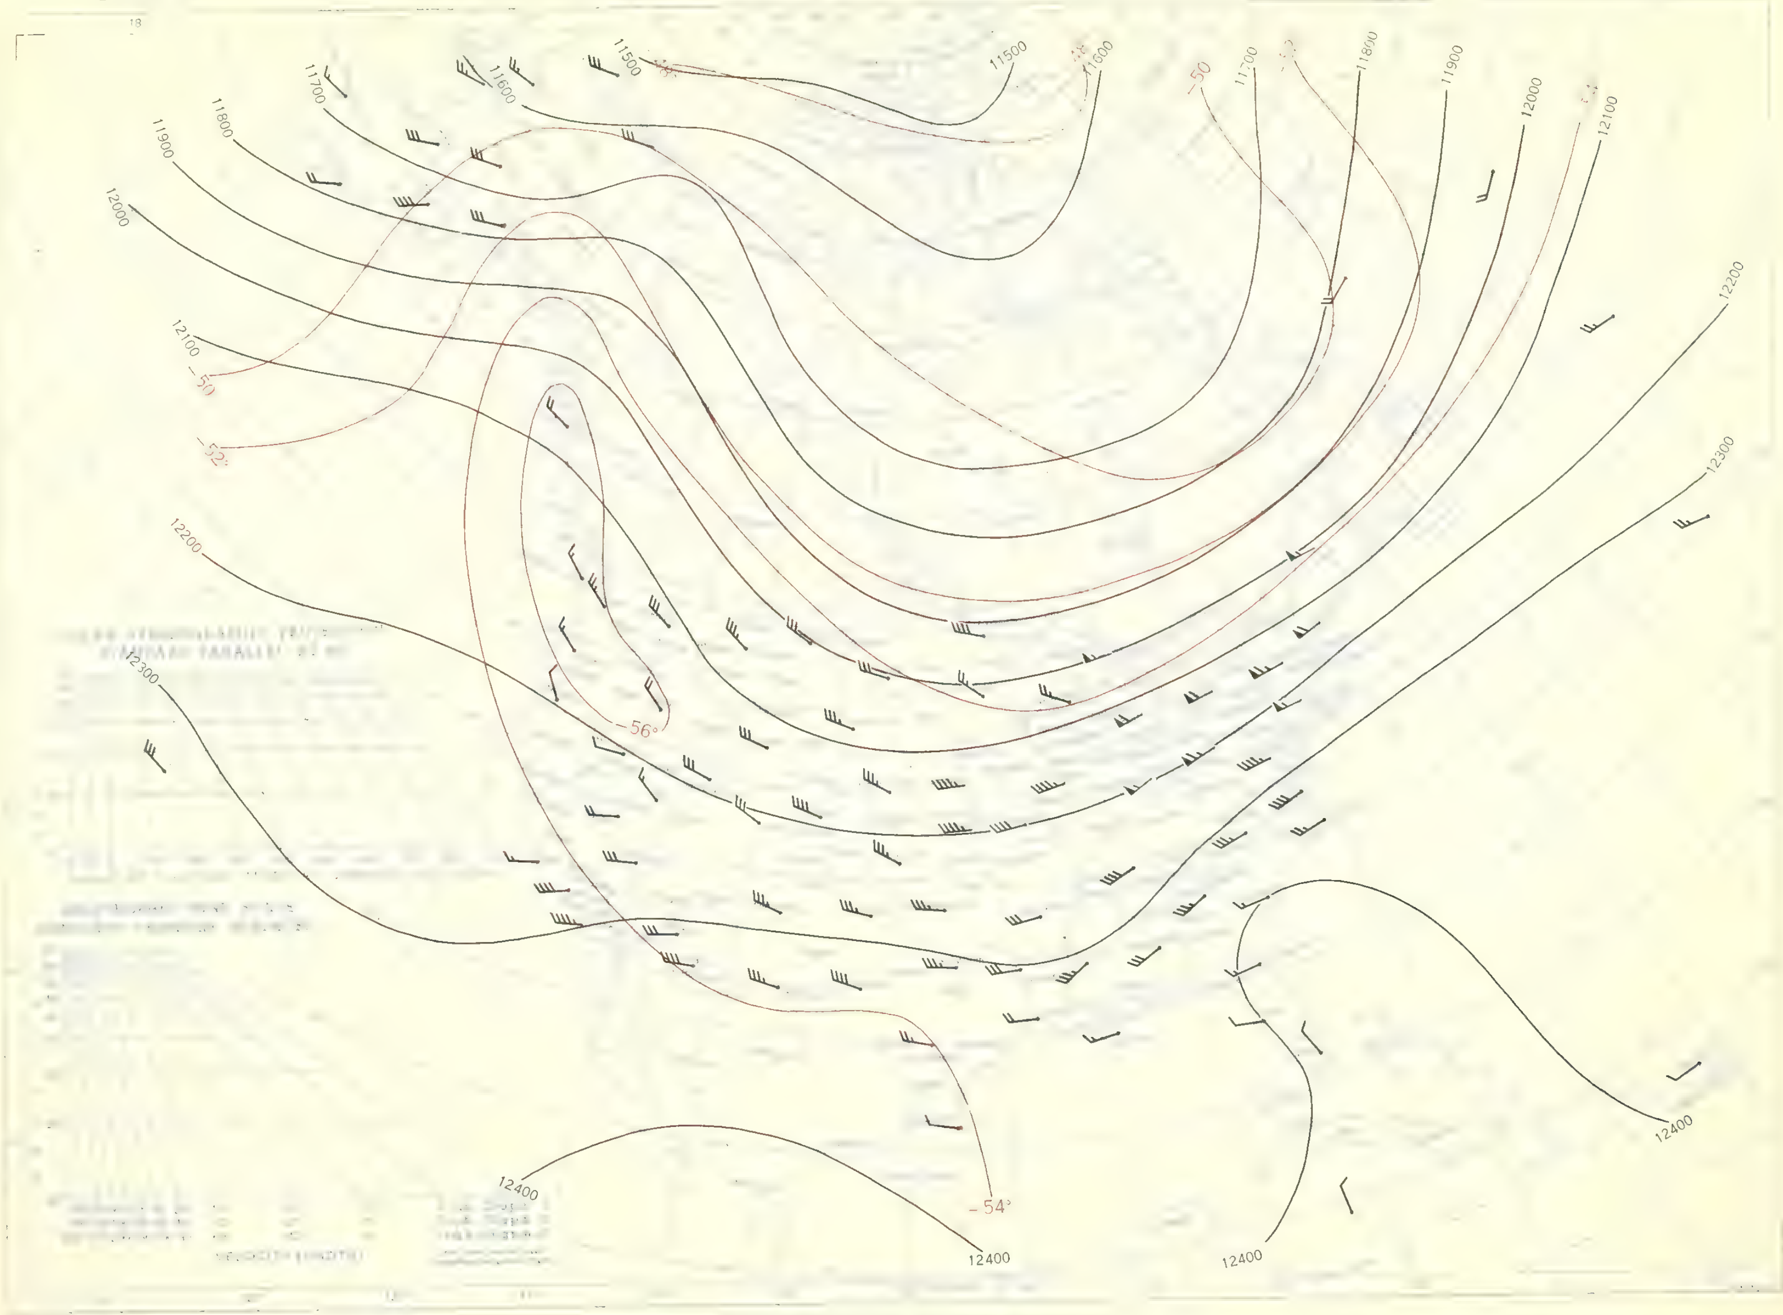
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



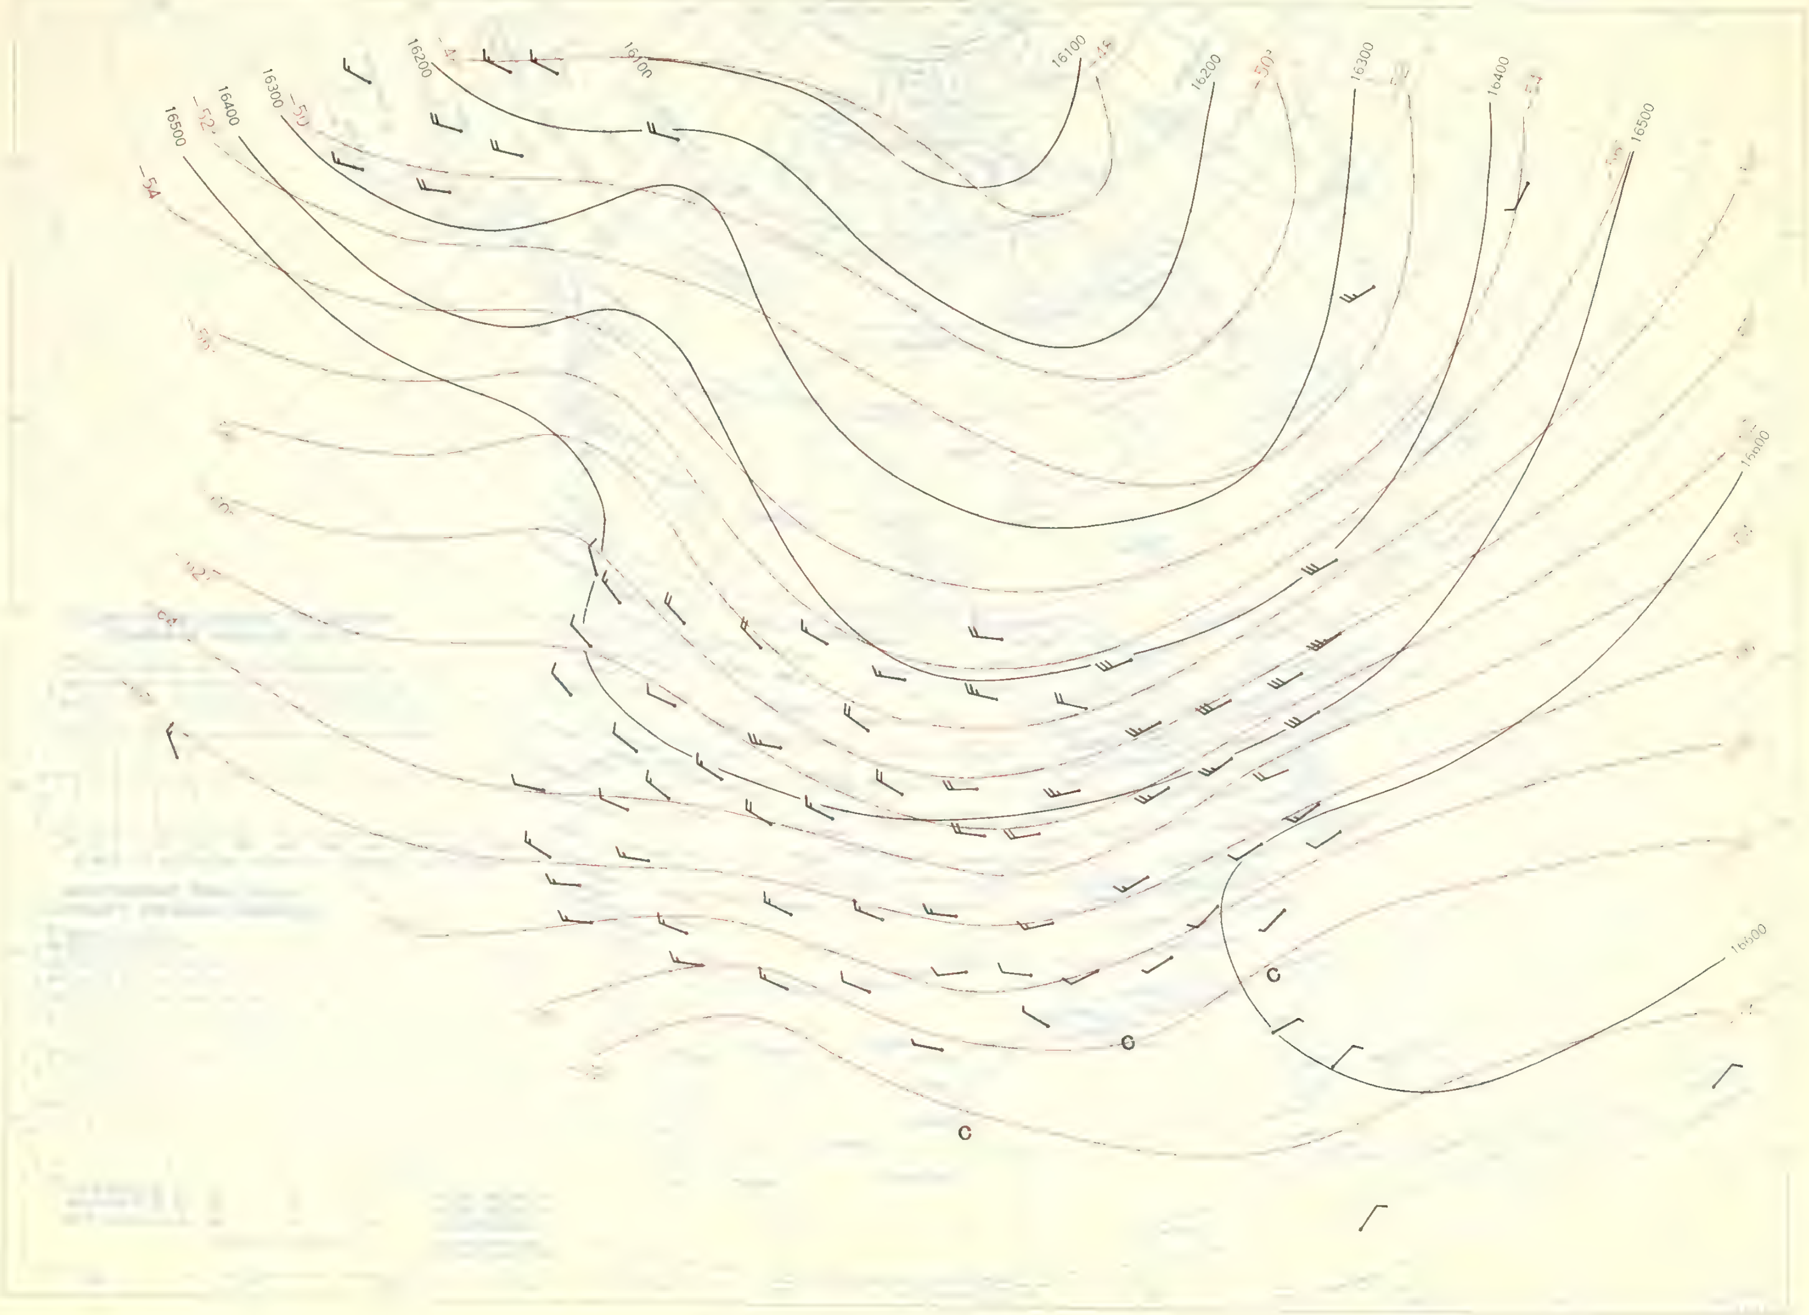
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, September 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 10 OCTOBER 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

October weather over most of the Nation was unseasonably cool with much cloudiness and mostly ample to locally excessive precipitation. Unusual features included heavy rainfall in the Far Southwest, early snowfall in central areas, unseasonably low temperatures in southern areas east of the Rocky Mountains, and floods in Texas. Cold, rainy weather delayed harvesting operations in many areas, prevented corn in the main Belt from drying enough for safe cribbing, damaged cotton and peanuts in parts of the South, caused widespread minor crop damage in California, and considerable crop damage in Arizona. Precipitation, however, provided adequate soil moisture nearly everywhere, and winter grain and pasture prospects generally were good to excellent.

TEMPERATURE.--Temperatures for the month, averaging slightly below normal in northern New England and along the California coast, were below normal virtually everywhere else with greatest departures from normal, 4° to 6°, in the Southern States and north-central Montana. Extreme temperatures for the month ranged from 109° at Dateland, Ariz., on the 5th to -12° at Redstone, Mont., on the 25th.

Below normal temperatures persisted almost all month in most areas. Main exceptions were slightly above normal warmth in Maine during most of the first 3 weeks, in the Great Plains the first week, in the Florida Peninsula and along the Canadian Border the third week, and about one-half the time along the Pacific Coast.

The lowest temperatures of the month occurred in nearly all areas on some date between the 24th and 29th when cold northern air overspread the North American Continent. The unusually rapid and far southward penetration of this cold air for the time of year reduced temperatures to record low levels for the season in many southern sections east of the Rockies, with some stations reporting the first freeze of the season as much as a month early. The first freeze at Little Rock, Ark., 31° on the 28th, was 18 days earlier than average. At Shreveport, La., 31° on the 28th was the earliest freeze there on record. Fort Myers, Fla., recorded 45° on the 28th, a record low there for October, and Key West, Fla., recorded 60° on the same date, a record low there for so early in the season. Crop damage from this early freeze was minor.

PRECIPITATION.--Precipitation for the month was featured mainly by the heavy amounts in the Far Southwest. This was among the wettest Octobers on record in California, Arizona, New Mexico, and Colorado where monthly totals ranged up to 18.35 inches, 10.21, 8.05, and 7.43 inches, respectively. In Arizona monthly totals, which exceeded 500 percent of normal at some stations, set new records for the month at Phoenix, Prescott, Winslow, and Yuma, and the 2.62 inches at Tucson was the second greatest amount there since 1867. Heaviest amounts fell during the third week. Soil moisture and winter grain and range prospects were the best in many years.

Moderate to heavy rains were frequent in Texas after the first week. In west-central Texas up to 10 inches of rain on the 12th caused major flooding in the Colorado River at Ballinger and serious flooding upstream from there. During the third week heavy rains in east Texas caused serious flooding along lower portions of most streams in the Gulf drainage area. Rains and muddy fields delayed cotton and sorghum harvests.

In most other parts of the country monthly totals generally ranged from 1 to 2 inches. In the Northeast precipitation ranged from about normal to much below. Topsoil moisture was improved and rains early in the month relieved the forest fire hazard in New England, but streamflow remained deficient and some wells were lower than during September in southern New England and northeastern New Jersey.

During the cold spell of the fourth week the earliest snow on record for Oklahoma City, Okla., fell on the 26th and for Evansville, Ind., and Dayton, Ohio, on the 27th. Snowfall of 6.1 inches at Spokane, Wash., was the greatest amount ever recorded there in October. Most of the Spokane snow fell during the fourth week when 1 to 4 inches of snow blanketed the northern half of eastern Washington as blowing dust and drifting snow brought traffic to a standstill.

DESTRUCTIVE STORMS.--On the 5th, 6th, and 7th a coastal storm with winds up to 50 m.p.h. and high tides damaged shore installations and some boats from North Carolina to southern New England.

Nearly all of the tornado damage occurred in Texas, Louisiana, and Mississippi. One of these storms caused considerable property damage and minor crop losses near Vicksburg, Miss., on the 15th and 16th. Several caused damage in Louisiana, one of the worst killing 1 person, injuring 29, and destroying at least 15 houses in a path near Leonville and Opelousa on the 15th. Several houses were destroyed or damaged by others occurring in various parts of the State on the 16th and 23d.

In New Mexico hail, wind, and rain damaged cotton and lettuce in the lower Rio Grande Valley on the 11th, and in the Lower Pecos Valley on the 13th, and at Silver City a tornado damaged an airport hangar and some planes on the 12th.

Flash floods caused damage in numerous places in the Far West.

CONDENSED CLIMATOLOGICAL SUMMARY

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.
* Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.
+ And also on a later date or dates.
a Maximum hourly average ‡ Peak gust
# Number of days maximum 70° or above for Alaskan stations.
ø Station pressures apply to elevations shown in Table 10b of the annual issue of this publication.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Dickinson (near), Galveston County	1	9:20 a.m.			0	0			Funnel aloft	
OREGON Hermiston-Umatilla area, Umatilla County	1-2	Afternoon, 1st early morning 2d	12-15	*6-8			3	2	Rain	Heavy rains produced new 24-hour records of 3.36 inches at Hermiston and 3.13 at Umatilla --nearly one-half of annual total for these locations. A number of basements flooded in both towns and some erosion occurred on surrounding farmland, but overall damage not great. Storm moved eastward.
WASHINGTON Kennewick-Pasco area, Benton and Franklin Counties	1-2					2		1	Rain and electrical	Runoff from precipitation amounts ranging between 1 and 2 inches resulted in flooding of a few buildings in low areas. 2 persons injured by lightning.
ALABAMA Decatur, Morgan County	3	Afternoon						1	Electrical	Lightning hit powerline, knocking out electric power for large portion of southeastern Decatur; oil circuit breaker badly damaged so that power out for 45 minutes.
TENNESSEE Somerville, Fayette County	3	4:15 p.m.				1		1	Electrical	Man received painful burns on arms and legs when lightning struck his home. Small amount of property damage done.
NORTH CAROLINA Dare and Currituck Counties	5-6	Noon, 5th - 8 a.m., 6th					4		Wind and tides	Low, moving northward a few miles offshore, caused strong winds and high tides, both on ocean front and on mainland side of sounds. Winds not over 50 m.p.h., and did little direct damage. Tides rose sufficiently to cause overflow across low portions of banks, interrupting highway traffic, causing beach erosion, and disrupting telephone communication. Dredge operating in Oregon Inlet damaged. Water rose into some store buildings on mainland waterfront, damaging merchandise.
VIRGINIA Tidewater Counties and Eastern Shore	5-6				1				Wind, rain, and tides	Extratropical coastal storm with peak gusts of 60 to 70 m.p.h., moved northward along coast, with center passing just east of Virginia Capes; it was accompanied by heavy rains and gales extending westward throughout central Virginia. Greatest damage in coastal areas where heavy seas and high tides buffetted coastal installations, grounding vessels, disrupting transportation, etc. Wind damage relatively minor in comparison to flooding and heavy seas, but falling trees disrupted power and communications as far inland as Richmond. All types of traffic disrupted and weather caused numerous vehicular accidents. 1 life lost by drowning and numerous injuries reported. Minor flooding caused both from heavy rains and high tides. Damage estimate is unknown, but said to have exceeded several hundred thousands of dollars.
MARYLAND and DELAWARE	6	During day							Wind, rain, and high tides	Gale winds and heavy rains associated with "northeaster" which moved up coast, over Delmar Peninsula and then westward through Maryland, churned up Chesapeake Bay and adjacent ocean area and caused much-above-normal tides, rough seas, flooding of coastal roads, and considerable wind damage to property. Small craft in some yacht basins on Chesapeake Bay ripped from their moorings. Shipping halted on Chesapeake and Delaware Canal. Sailings of ships from Port of Baltimore cancelled or delayed. One 62-foot sailboat grounded near Indian River Inlet, Delaware. Tides on coast reported near record heights at some points. Power failures widespread in Maryland and Delaware as trees downed over powerlines. Telephone service likewise knocked out in places by falling trees and strong winds. In Baltimore City, major damage occurred to trees and utility lines. At Friendship International Airport, gust of wind reached 75 m.p.h., at 2:15 p.m.
ARIZONA Benson (25 miles north of), Cochise County	6	Evening					4	1	Flash flood	Flash flood waters destroyed mining equipment in arroyo.
NEW JERSEY Coastal area	6						5		Wind and tides	1 yacht, 1 yawl, and other small craft sank during coastal storm which moved northward along coast. Some minor flooding occurred at times of a.m., and p.m., high tides. Principal losses due to wind.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

OCTOBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
	6									Minor storms also reported st Sioux Center and Sioux Rapids, Iowa; at Estelline and near Isabel, S. Dak.; and near Abernathy, Tex.
PENNSYLVANIA Eastern half	6-7	4 p.m., 6th-4 p.m., 7th					4	3	Wind and electrical	Extratropical storm brought 50-m.p.h., winds to eastern Pennsylvania which did light but extensive damage to trees, powerlines, etc. Many boats tied up on Susquehanna River damaged by high winds, slamming them into piers. Lightning fired barn in Gettysburg area, resulting in $20,000 fire. High winds brought down many unpicked apples in York-Adams County area. Storm moved northward.
CONNECTICUT and RHODE ISLAND, entire area	6-7	Late p.m., 6th - early a.m., 7th				12	3	1	Rain, electrical and wind	Moderately heavy rains accompanied by some lightning as coastal storm affected area. 4 homes struck by lightning in East Hartford and southwest of Providence, with blown-out TV set and minor structural and fire damage resulting. Coastal road flooded in southwestern Connecticut and grounded freighter off Newport, R. I., battered rough seas as winds up to 35 m.p.h., caused tides 1 to 2 feet above normal. Traffic accidents blamed on slippery highways caused minor injuries to 12 persons. Benefits of precipitation to crops and critically low reservoirs and streams far exceeded storm damage. Storm moved east-northeastward.
MASSACHUSETTS	6-7				1	1	3	1	Wind and rain	Winds felled tree branches, breaking a few powerlines, during night in Plymouth County in Brockton area. Automobile accident at Chicopee, attributed to rain, caused death and injury.
OKLAHOMA Russell, Greer County	7	4:30 p.m.	6	*1					Hail, rain, and electrical	Hail size of golf balls caused up to 75 percent damage to cotton. Heavy rain and lightning accompanied storm. Storm moved northeastward.
TEXAS Sagerton (near), Haskell County	7	6:30 p.m. -midnight	25	*1		20	°4	C	Hail and wind	Hail fell in checkerboard pattern. TV antennas blown down and barns and roofs destroyed by wind. Hail damage to 50 percent of cotton crops. Damage mostly to cotton and feed. Truckload of Mexican cotton pickers bruised by hail as large as baseballs. Storm moved southward and eastward.
OKLAHOMA Altus, Jackson County	7	7 p.m.						3	Electrical and rain	Lightning struck 2 homes, causing considerable structural damage. Rains caused minor damage to open cotton.
TEXAS Seymour (west of), Baylor County	7	7:15 p.m.	Short	Narrow	0	0	3		Tornado	Destroyed garage and storage room, damaged home and several roofs and barns, uprooted trees and damaged others. Tornado moved southeastward.
TEXAS Baylor and Knox Counties	7	7:30-11:30 p.m.	15	*1		2	°4	C	Hail, wind, and rain	1/2 mile of railroad ballast damaged between Goree and Munday, considerable cotton and grain sorghum crops damaged in that area. Heavy rain and strong wind accompanied storm. 2 workmen injured by large hail. Storm moved northeastward.
OKLAHOMA Duncan, Stephens County	7	9:40 p.m.						1	Electrical	Lightning struck TV antenna at Duncan, resulting in damage to rotor, TV set, and wall paper in room. Additional lightning strikes noted between Duncan and Comanche.
TEXAS Hamlin and Plainview areas, Jones County	7	11 p.m.	20	*7				4	Hail	From about 5 miles east of Hamlin to south of Tuxedo, and again near Plainview, hail damaged cotton and feed crops 35 to 50 percent. Storm moved northeastward.
	7									Minor storm also reported near Throckmorton, Tex.
COLORADO Arkansas Valley	7-8	11 p.m., 7th-early a.m., 8th		*2			4		Severe thunderstorm and heavy rain	Heavy rain beginning shortly after 11 p.m., of 7th and lasting about 2 hours did considerable damage to Pueblo streets and homes. Rainfall heaviest east of city, area in which Pueblo Weather Bureau station located. 3.75 inches of rain fell in 2 hours, an amount exceeding all-time record total for entire month of October. Heavy rain shortly after midnight fell at points along Arkansas River. Unofficial reports in La Junta area of 1-1/2 inches to over 4 inches of rain in some localities which caused damage to crops, powerlines, roads, bridges, and other property.
FLORIDA Tamiami Airport, Dade County	8	12:30 p.m.			0	0	3		Tornado, funnels aloft, and waterspouts	Several additional funnel clouds and waterspouts also sighted in Dade County area during afternoon.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

OCTOBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Lamesa (near), Dawson County	8	3:20 p.m.			1				Electrical	Lightning killed workman riding with others in back of truck, about 2 miles north of Punkin Center. Storm moved northeastward.
WASHINGTON Columbia Gorge	8								Wind	Strong wind in Columbia Gorge resulted in numerous power outages and some property damage by falling trees.
	8									Minor storms also reported at Baird and Big Lake, Tex.
TEXAS Pearsall, Frio County	9	7:30 a.m.	20	*20			4		Rain	Roof of retail store caved in because of heavy rain. 4 inches of rain reported between 8 and 9 a.m. Heavy erosion damage. Storm moved eastward.
NEW MEXICO Rincon Valley in vicinity of Hatch, Dona Ana County	9	4 p.m.	14	*2			1	5	Hail	Hailstones averaged 1/2 inch in diameter. Storm moved northeastward.
CALIFORNIA Entire State	9-11						4		Rain, wind, snow, hail, and electrical	Slow moving cold front advancing southeastward across California caused locally heavy rains and strong winds. Damage other than to crops minor although widespread. Damage to crops, total loss of some unharvested grapes and prunes in Sonoma and Napa Counties; severe loss to dry beans in Glenn and Sutter Counties, and to flax in San Mateo County; downgrading of walnuts and cotton; increased harvesting costs of all remaining crops due to wet, muddy fields. Coffer Dam washed out at Trinity River Project in Trinity County, street intersections were flooded in Marin and Santa Clara Counties; some freeway constructions were washed out at Palo Alto; wax paper factory at Burlingame flooded, causing heavy damage to paper stock. In Bakersfield, heavy rains flooded several intersections. In southern California, storm caused some flooding and numerous power failures. In San Bernardino, sudden deluge on 11th overtaxed storm drains and caused some damage to a few homes and 1 automobile. State Route 39 in San Gabriel Canyon blocked by rock and mud slide. Locally strong winds blew shingles from roof in La Habra and tipped over trash cans. Strong winds blew branches from trees in Whittier, and winds reached 40 m.p.h., at Daggett and Inyokern in desert region. Snow fell in mountains above 4,000 feet, and heavy thunder with hail occurred in Van Nuys area.
NEW MEXICO Rio Grande Valley from 15 miles north of Hatch to 10 miles south, Dona Ana County	11	4 p.m.					1	5	Hail	Spotted damage, with hailstones reported up to 1-1/2 inch in diameter in Tonuco area.
NEW MEXICO Las Cruces area, Dona Ana County	11	6:30 p.m.	15	*4			1	5	Hail and rain	Part of crop damage due to flooding of fields. Storm moved westward.
TEXAS El Paso and Hudspeth Counties	11		40					5	Hail and rain	Spotted but heavy hail between Fabens and Esperanza, accompanied by heavy rain, caused crop damage.
NEW MEXICO Silver City, Grant County	12	4 a.m.	8	50	0	0	5	1	Tornado	Demolished hanger and 6 airplanes at airport. Slight damage to farm buildings. Tornado moved east-northeastward.
NEW MEXICO Alamogordo Otero County	12	P.m.					5	1	Wind	Damage to planes and installations at airport, no evidence of tornado.
	12									Minor storms also reported in Tucson area, Ariz.; at Stanton, Iowa.
TEXAS Moran, Shackelford County	13	5 a.m.			0	0			Tornado (suspected)	
NEW MEXICO Luna County (northern portion)	13	3 p.m.					1	4	Hail and rain	About half of damage due to heavy rains. Storm moved northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Gate area, Beaver County	13	5:20 p.m.			0	0			Tornado	Ground Observer Corps received report of tornado just north of Gate. Funnel observed from Buffalo, Harper County, silhouetted against bright band of evening sky. Although funnel seemed to reach ground, there were no reports of damage.
KANSAS Wichita County	13	6:30-7 p.m.	15	*3			3	2	Wind and hail	Wind and hail damage occurred from south of Leoti to northeastern corner of County. Some hailstones 1-1/2 inches in diameter and ground covered in some places to depths of 2 inches. Milo crops and roofs suffered greatest loss. A few fields damaged 30 to 40 percent. Property and crop damages given result of wind. Storm moved northeastward.
NEW MEXICO Chaves County	13	P.m.	30	*4			5	6	Hail and wind	Wind damaged several barns; hail average size of golf balls.
COLORADO Burlington, Kit Carson County	13	Evening							Hail	Hailstorm damaged vegetation, roofs, and vehicles. Storm not as severe as spring hailstorms, but hailstones to depth of 2 inches.
TEXAS Taylor, Williamson County	14	12:53 a.m.					4		Electrical and rain	Lightning caused fire which heavily damaged home. 2 rooms and contents destroyed. Heavy rain and lightning excessive.
TEXAS Victoria (10 miles southeast of), Victoria County	14	9:25 a.m.			0	0			Funnel aloft	
ARIZONA Picacho, Pinal County	14	All day					4		Flood	Flood waters raced through labor camp, flooding about 50 cabins and a dozen homes. Cotton fields flooded (see Phoenix storm of 31st).
TEXAS Providence City, Wharton County	14	12:15 p.m.			0	0			Funnel aloft	Observed moving northeastward.
TEXAS Waller and Brookshire (near), Waller County	14	3 p.m.			0	0	°4	C	Tornadoes and rain	3 separate tornadoes, accompanied by heavy rain, ripped drive-in theater screen, damaged home, demolished church, and uprooted trees and graveyard monuments. Crop damage to peanuts and rice. Severely damaged huge sheetmetal dairy barn, feed contents destroyed. Other buildings damaged between Waller and Hempstead, roofs torn off, brans destroyed, and feed ruined by rain. Storm moved northeastward.
TEXAS Dayton (9 miles north of), Liberty County	14	5:45 p.m.			0	3	4		Tornado	2 farm homes 1/4 mile apart destroyed with all contents. One hurled 150 feet against huge oak tree. Several barns and outbuildings destroyed, other homes damaged, trees uprooted, power- and phone lines downed.
TEXAS Lufkin, Angelina County	14	6:23 p.m.			0	0			Funnel aloft	Observed moving northward.
TEXAS Lolita, Jackson County	14						4		Electrical and rain	Lightning ignited 3 oil tanks, destroyed them and contents. Heavy rain accompanied storm.
	14									Minor storm also reported near Kirbyville, Tex.
TEXAS Bryan (near), Brazos County	15	2:25 p.m.			0	0			Funnel aloft	
LOUISIANA Leonville, Cypress Point, to Mix, St. Landry and Pointe Coupee Parishes	15	10-11 p.m.	45	100	1	29	4	2	Tornado	Tornado struck near Leonville passed through Cypress Grove Community, near Opelousas, thence through thinly settled areas to town of Mix in Pointe Coupee Parish; about 15 homes destroyed, many damaged and communications lines severed; all casualties were living in insubstantial homes. Tornado moved north-northeastward.

KANSAS Marion, Marion County	20						4		Electrical	Large barn at south edge of Marion struck by lightning. Loss included barn, 5000 bales of hay, 600 bushels of oats, and some farm implements.
KANSAS Great Bend, Barton County	23	Early a.m.							Electrical	Lightning during early morning thunderstorm struck woodworking shop, resulting in several hundred dollars damage to building and contents. Fire discovered at 2:28 a.m.

* Miles instead of yards.

° Includes crop damage.
C Crop damage.
† Storm damages are placed in categories varying from 1 to 9 as follows:

Category	Damage
1	Less than $50
2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

OCTOBER 1957

Major flooding occurred in Texas in the Guadalupe River below the confluence with the San Marcos River and in the Colorado River. Light to moderate overflows occurred on other Texas streams. Flooding elsewhere over the country was light and sparse.

ATLANTIC SLOPE DRAINAGE

Stream flow and ground water levels in the Merrimack River Basin in New Hampshire and Massachusetts continued very low during October, with low marks on some river gages at near record low. Many domestic wells in the area were dry.

The minor flooding on the lower Cape Fear River in North Carolina from the 2d through the 4th was due to heavy rain from September 28 through October 1. No damages were reported.

Intermittent light to heavy rains from September 28 to October 5 caused flooding on the Savannah River at Clyo, Ga., from the 10th to the 12th and on the Ogeechee River at Dover, Ga., from the 9th to the 13th. The rainfall during that period averaged approximately 5.25 inches in the Savannah Drainage and 6.25 inches in the Ogeechee Drainage. No damage was reported.

EAST GULF OF MEXICO DRAINAGE

The flooding on the Pearl River at Bogalusa, La., from September 30 to October 4 was due to rainfall, ranging from 2.50 to 4.50 inches over the Pearl Basin. Very little damage, if any, resulted from this flooding.

A flash flood occurred at Tuscaloosa, Ala., (Black Warrior Basin) in the early morning of the 3d, due to heavy rain during the 12-hour period ending at 6 a.m., central time. The rainfall at that point totaled 3.36 inches. Twelve persons were rescued from 5 houses that were flooded by water. Water 12 inches deep was reported in some of the houses. No fatalities nor injuries were reported. The unusual feature of this heavy rainfall and flash flood was that they occurred during the month of October, the driest month of the year. During the 71-year period, 1887-1957, only October 1932, with 7.00 inches in a 24-hour period, exceeded the 3.36 inches of October 3, 1957, at Tuscaloosa, Ala.

MISSISSIPPI SYSTEM

Red Basin.--Light to moderate flooding occurred on the Sulphur River from the 15th to the 25th, due to heavy rain from the 13th to the 16th. Precipitation during that period averaged 4.83 inches, ranging from 2.42 inches at Negley to 8.86 inches at Harleton, Tex. Flood damage was small since most of the area affected was grazing land.

WEST GULF OF MEXICO DRAINAGE

Light to moderate flooding occurred on the Sabine River from the 17th to the 30th, due to heavy rain from the 13th to the 16th. Precipitation averaged 7.09 inches during the 3-day period and ranged from 4.26 inches at Greenville to 12.30 inches at Henderson. Damage was confined to the area from near Tatum to above and beyond Mineola, Tex. Damage was light.

The flooding in the Brazos and Trinity River Basins in Texas was due to excessive rains (2 to 12 inches) from the 13th to the 16th. An additional 1 to 2 inches of rain fell on the 22d and 23d, with the heaviest amount near Cameron below Belton Dam. There were two crests on the Little River with the first crest 8.8 feet above flood stage on the 15th. Flooding along the Brazos River was minor.

There were two major floods in the Colorado River Basin in Texas during October. One was in the upper watershed above Ballinger and the other in the lower section below Smithville to the Gulf. Both were due to heavy rains measuring 7 to 13 inches in 24 hours. The crest of 28 feet at Ballinger on the early morning of the 14th caused extensive damage and about 500 persons had to be temporarily evacuated from their homes. There were no injuries or loss of life. The previous flood and highest stage of record at this point was 32 feet on August 6, 1906. Downstream there was no flooding at Smithville, but torrential rains below that point caused flood crests at Wharton and Columbus. There was extensive flooding of lowlands from Columbus to the Gulf, with loss of some crops. The peak at Wharton, Tex., of 30 feet exceeded the spring floods of 1957 and was the highest at Wharton since June 1941.

The heavy rains of the 13th to the 15th over the Lavaca and Navidad Basins in Texas caused flooding over the entire length of both rivers. The crest at Ganado was 10.8 feet above flood stage and on the Lavaca at Edna, Tex., was 5.3 feet above flood stage. This same storm caused major flooding along the Gaudalupe from Gonzales, Tex., to the mouth. The rains totaled 6 to nearly 10 inches in a 72-hour period. Three crests occurred at Gonzales from these rains, but they all merged into one crest at Cuero and below. No flooding was reached on the San Antonio River, although there was considerable flash flooding on the small tributaries especially in the City of San Antonio from the heavy rainfall (4 inches) on the 21st and 22d. Thirty-five thousand to 40,000 acres of grazing land was flooded. There was some damage to houses in San Antonio and Victoria, Tex. Some roads and bridges on the smaller tributaries were also damaged.

The flooding on the Frio and Nueces Rivers in Texas between the 10th and 17th was due to heavy rain on the 9th. Rainfall averaged in excess of 3 inches over much of the Frio watershed. The heaviest rainfall was an estimated 11 inches near Reagen Wells, Tex. Rainfall amounts in excess of 6 inches were reported in the Pearsall-Batesville, Tex., area and Briscoe Ranch. Water continued to flow over the dam at Lake Corpus Christi all month, causing some delay to the construction of Wesley Seale Dam and also to state highway construction near Calallen.

Minor flooding occurred along the Rio Grande at Albuquerque, N. Mex., on the 19th and 20th, due to heavy rains above Albuquerque. Stream flow was contained well within the levees and no damage resulted.

Locally heavy rains over the Devil's River watershed caused flash rises on the Devil's River on the 14th and 15th with slightly above bankfull stages at Baker's Crossing, Tex., on the 15th. Bankfull conditions occurred again on the 16th. No damage resulted.

PACIFIC SLOPE DRAINAGE

Light to locally moderate rainfall fell over the Sacramento Basin during the first 8 days of October and between the 8th and 10th and again on the 12th and 13th caused some overflow at Tisdale Weir, Calif., into Sutter Bypass.

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 5 obs., 30,879 m., -56.1 C
2/ 10 mb., 8 obs., 30,908 m., -47.7 C
3/ 10 mb., 16 obs., 31,089 m., -45.6 C., 267 dir., 46.4 speed
7 mb., 7 obs., 33,461 m., -42.6°C.
4/ 10 mb., 10 obs., 31,029 m., -45.4°C.

15						

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 9 obs., 31,299 m., -40.4 C

2/ 10 mb., 6 obs., 31,105 m., -41.9 C

25-----	21	25,138	-51.3			
20-----	6	26,624	-49.0			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 5 obs., 31,304 m., -39.1°C.

2/ 10 mb., 20 obs., 30,904 m., -55.2°C., 302 dir., 23.3 speed
7 mb., 17 obs., 33,178 m., -54.9°C., 303 dir., 26.4 speed
5 mb., 6 obs., 35,333 m., -54.5°C.

15-----	19	28,270	-50.6		273	39.1

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 6 obs., 31,212 m., -43.6°C.
2/ 10 mb., 6 obs., 30,719 m., -59.9°C.
3/ 10 mb., 9 obs., 31,151 m., -42.6°C.
4/ 10 mb., 7 obs., 31,187 m., -42.1°C.
5/ 10 mb., 11 obs., 30,947 m., -48.2°C.

15-----						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

2/ 10 mb., 9 obs., 30,768 m., -57.8°C.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

K	Smoke
MK	Moderate smoke
M	Moderate haze - indeterminable
S	Slight haze - indeterminable
*	Values corresponding to true solar noon

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

SOLAR RADIATION DATA

OCTOBER 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg
Date------------	1	2	3	4	5	6	7		8	9	10	11	12	13	14		15	16	17	18	19	20	21

Note: Langley is the unit used to denote one gram calorie per square centimeter.

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

OCTOBER 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	*14	143	100	157	94	167	186	203	184	165	87	60	163	151	136	156	*37	*116	128	133	139	144	176	*-8	90	*56	63	116	88	13	*-17	119

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

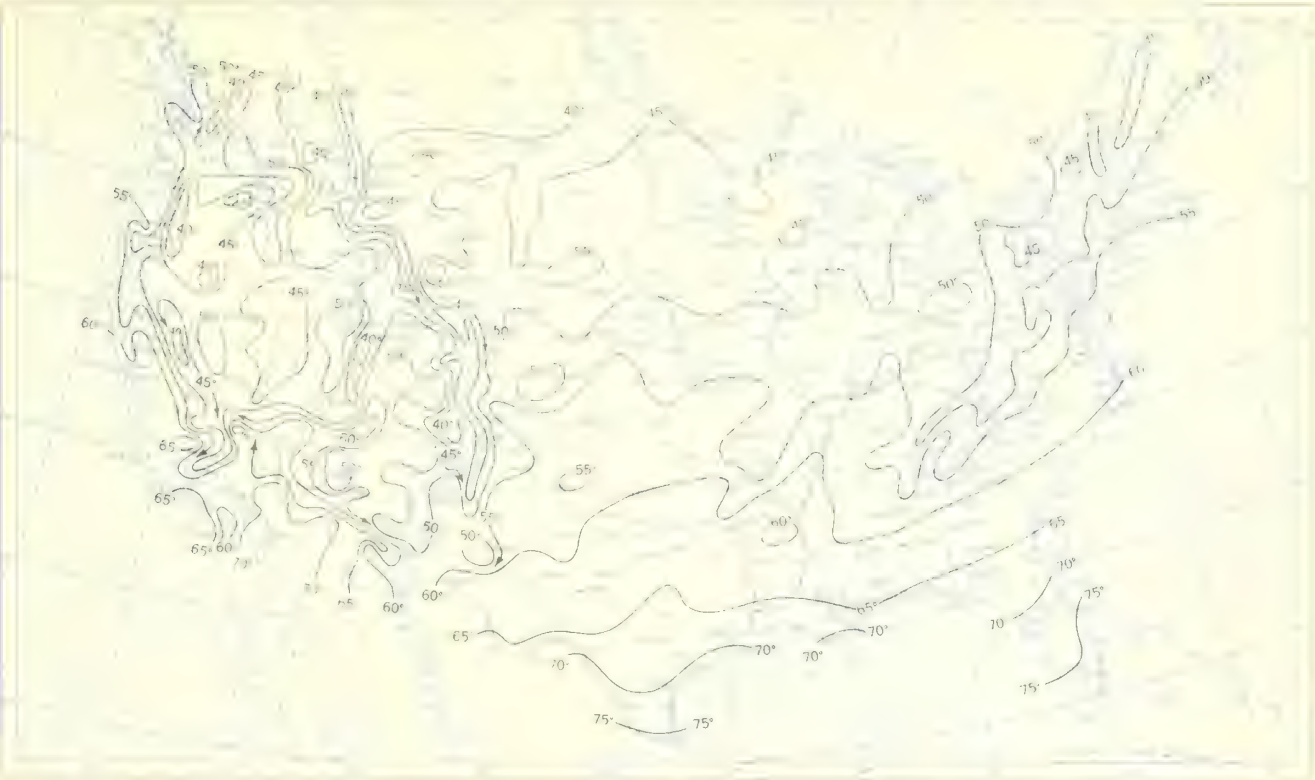
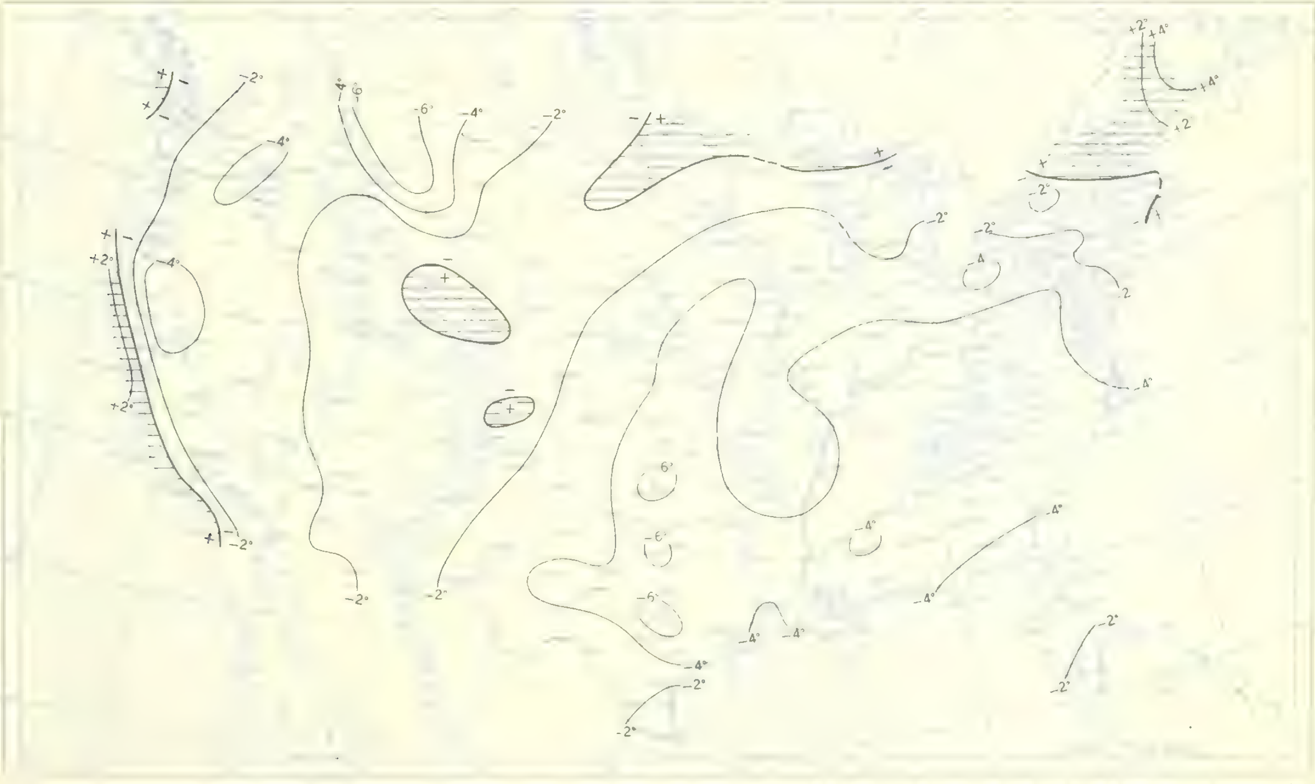
USCOMM-WB-Asheville - 1/8/58 - 1850

Chart I. A. Average Temperature (° F.) at Surface, October 1957.

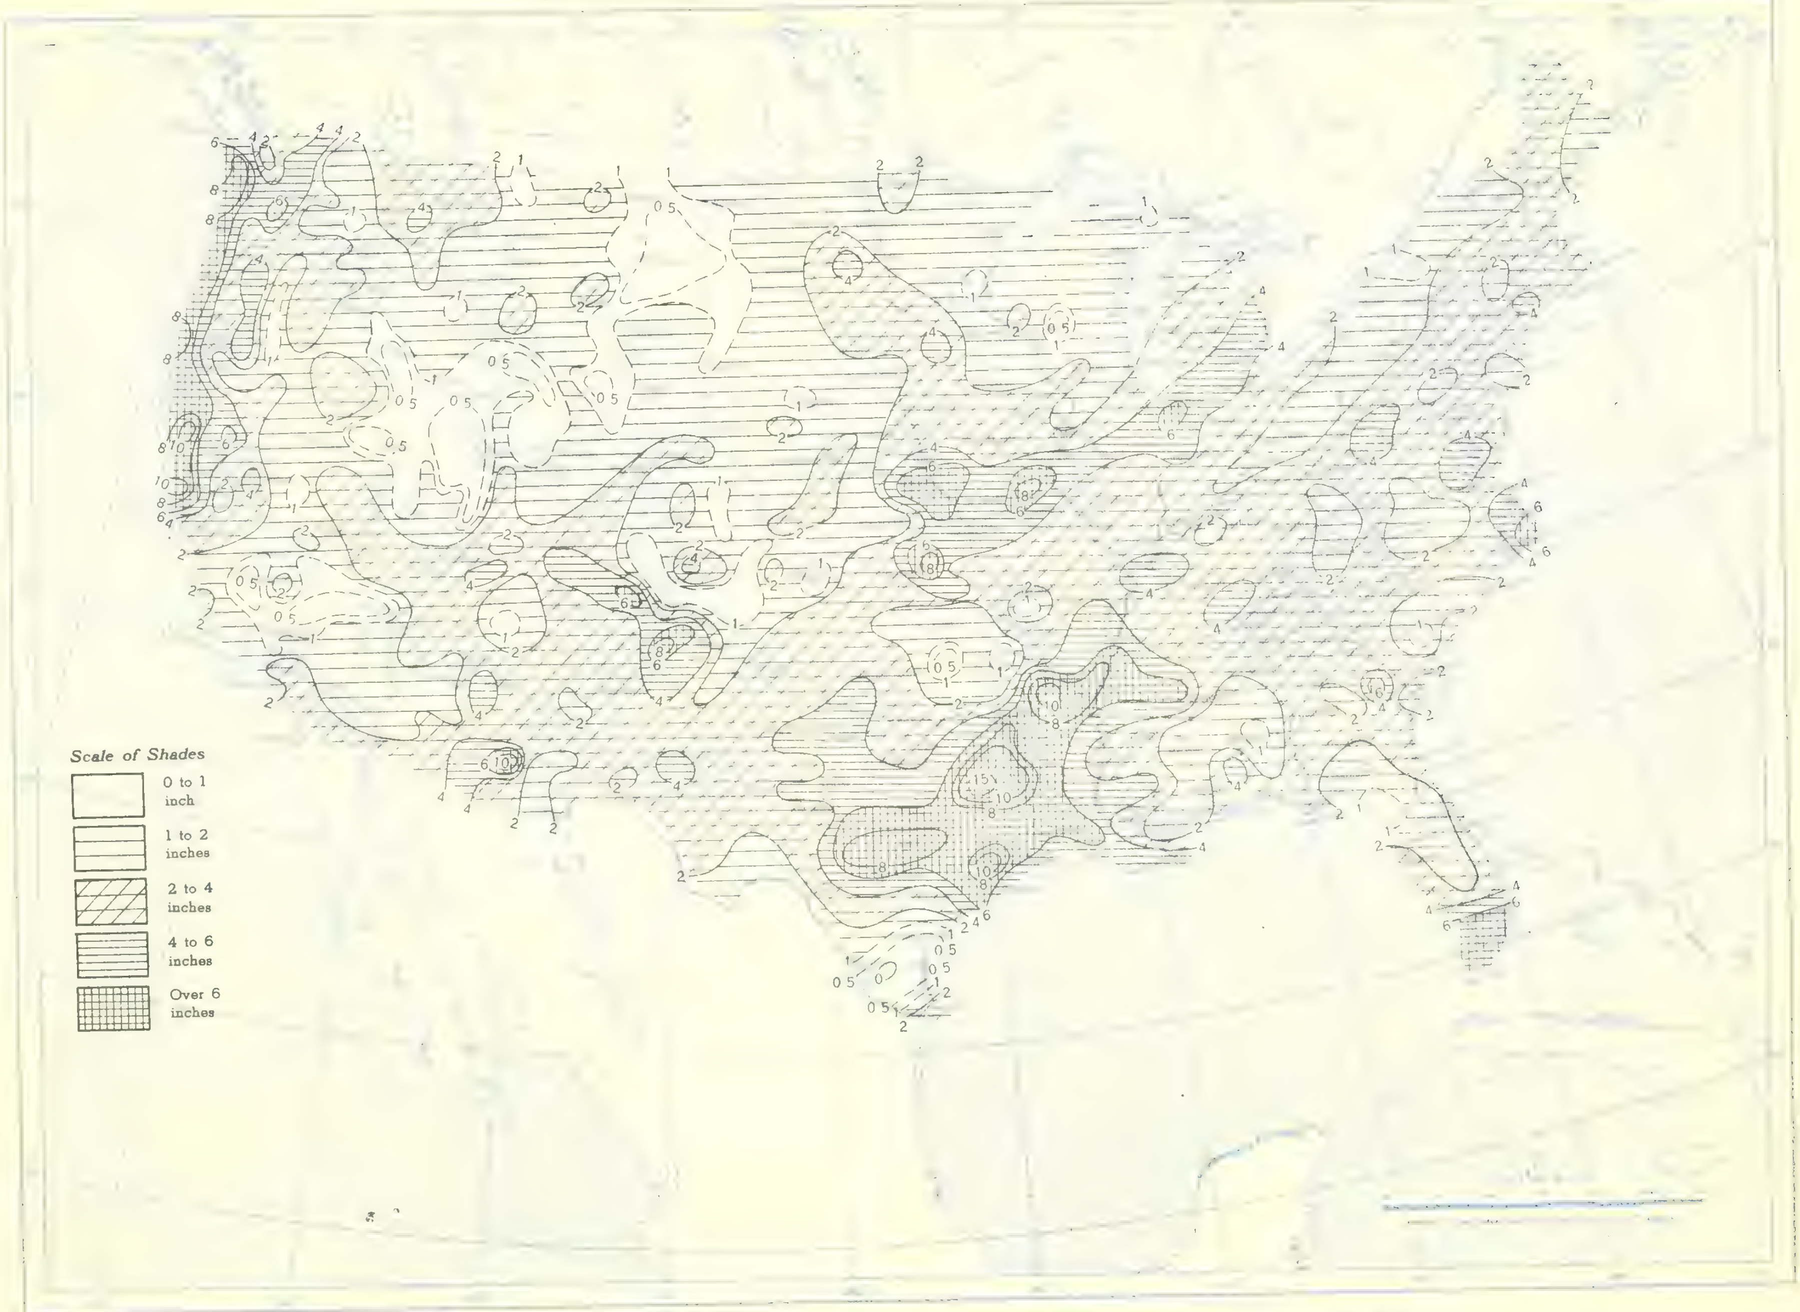


B. Departure of Average Temperature from Normal (° F.), October 1957.



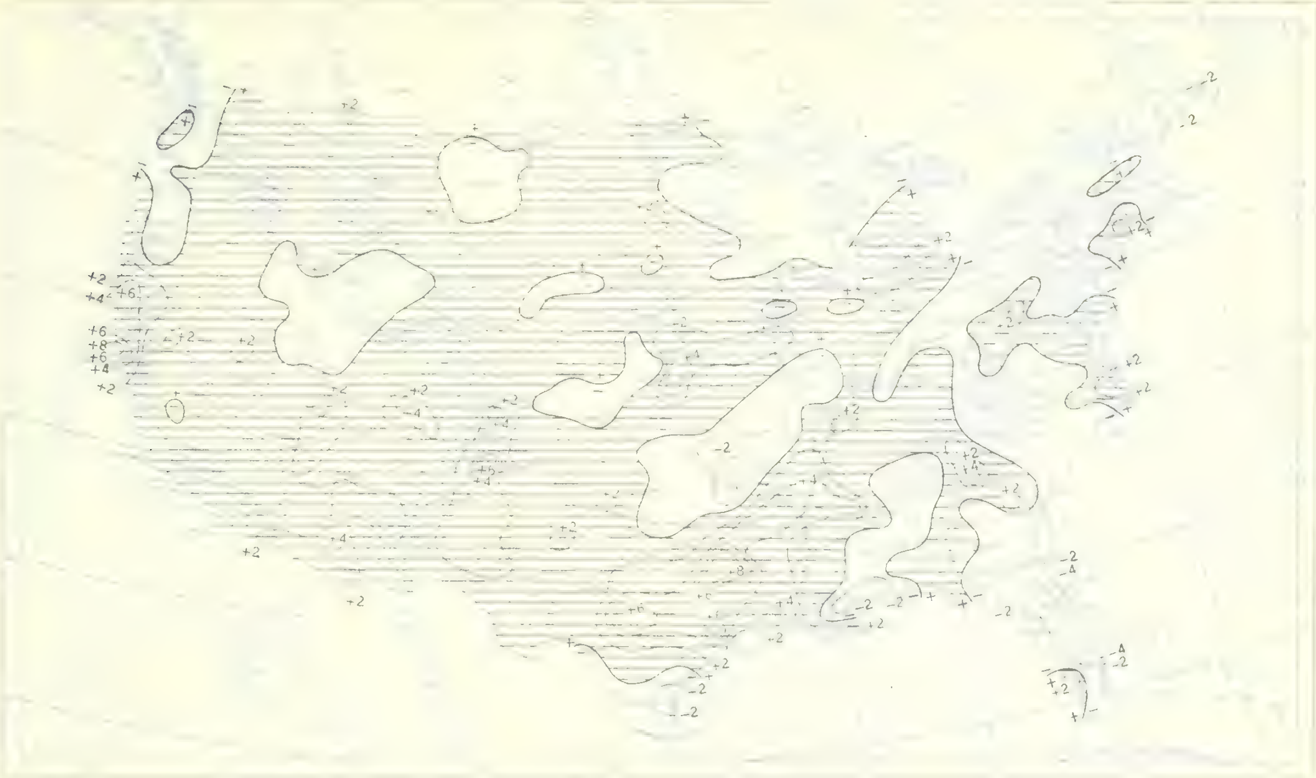
A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), October 1957.

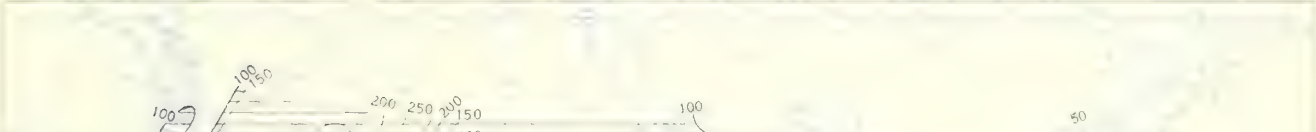


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), October 1957.

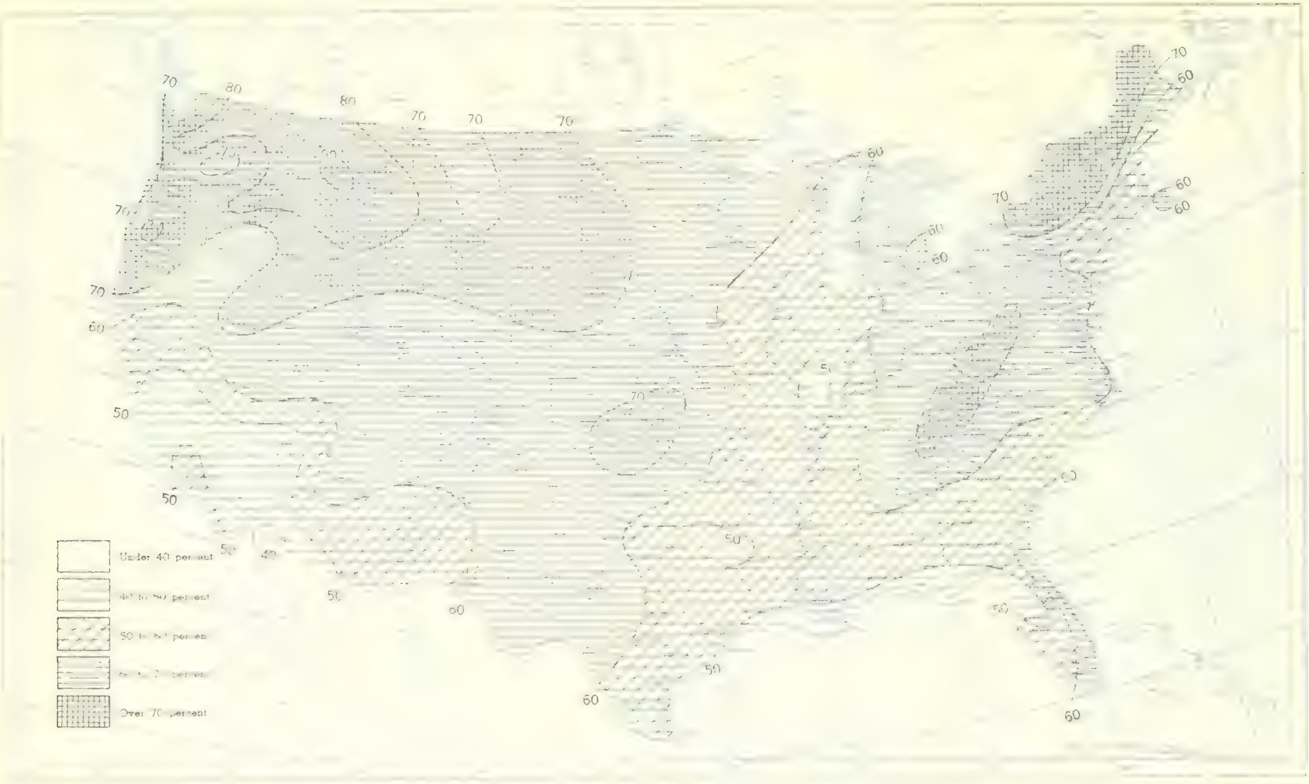


B. Percentage of Normal Precipitation, October 1957.

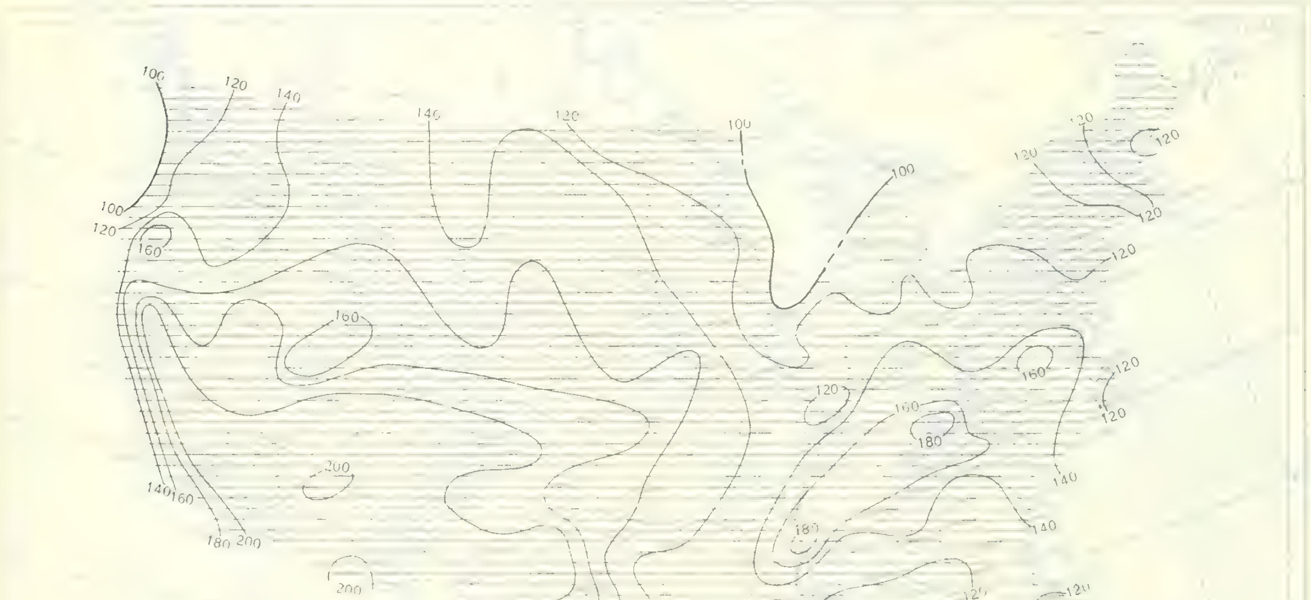


Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, October 1957.

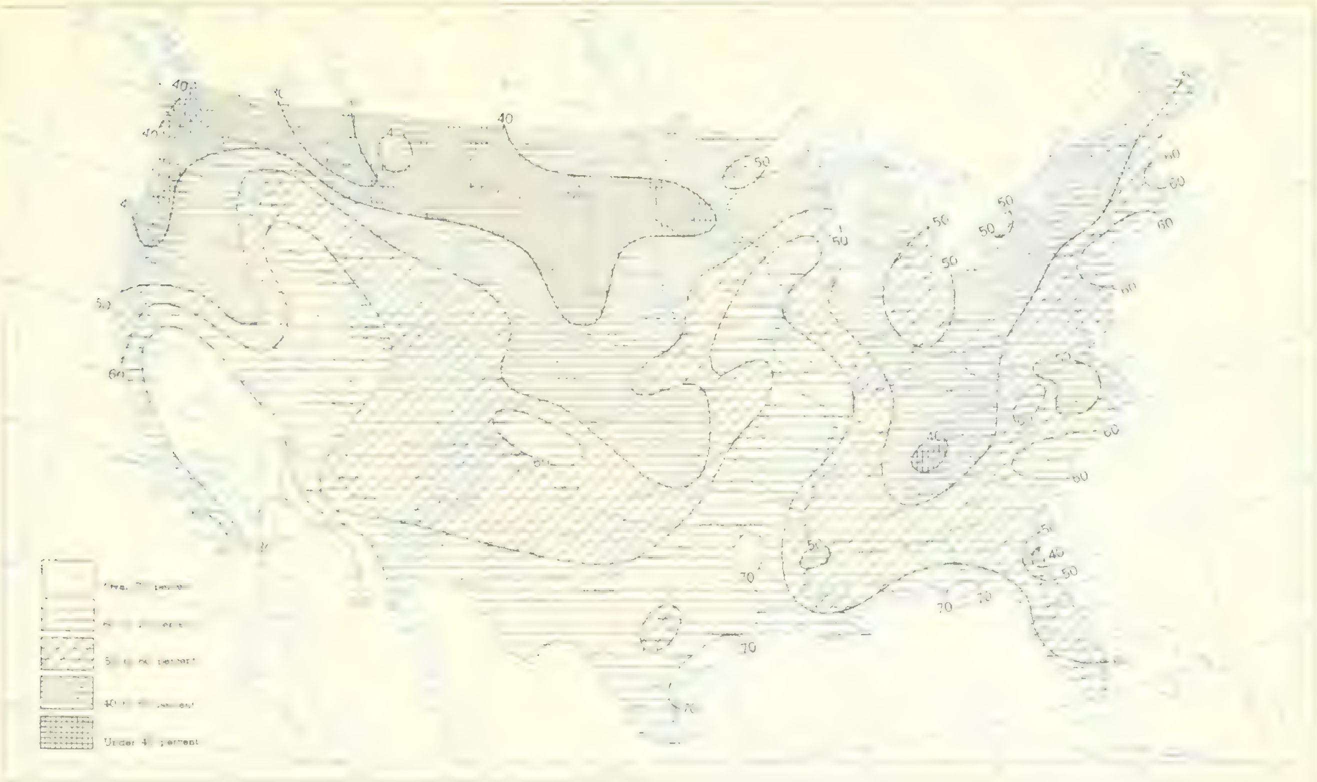


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, October 1957.

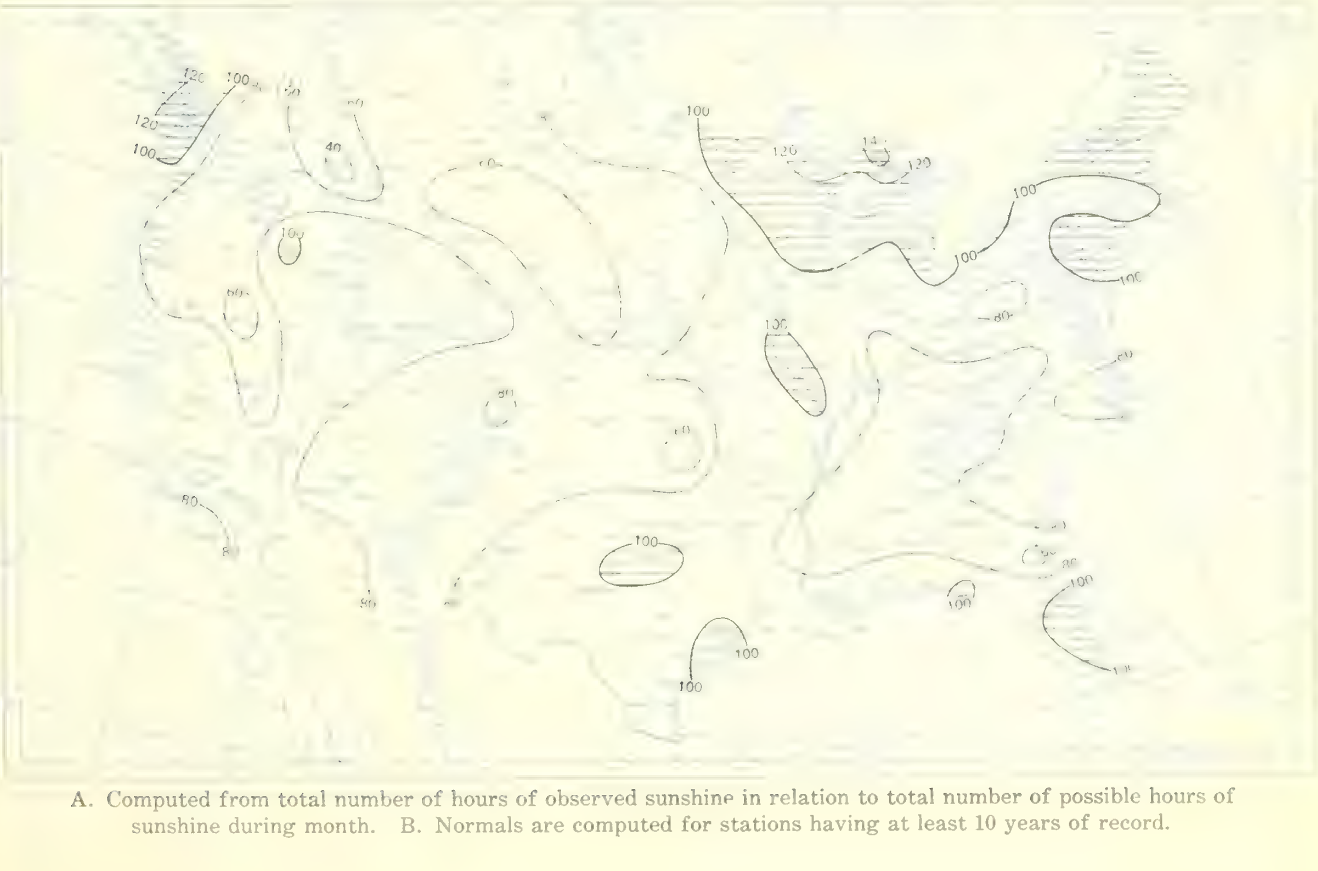


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, October 1957.



B. Percentage of Normal Sunshine, October 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, October 1957. Inset: Percentage of Mean Daily Solar Radiation, October 1957. (Mean based on period 1951-55.)

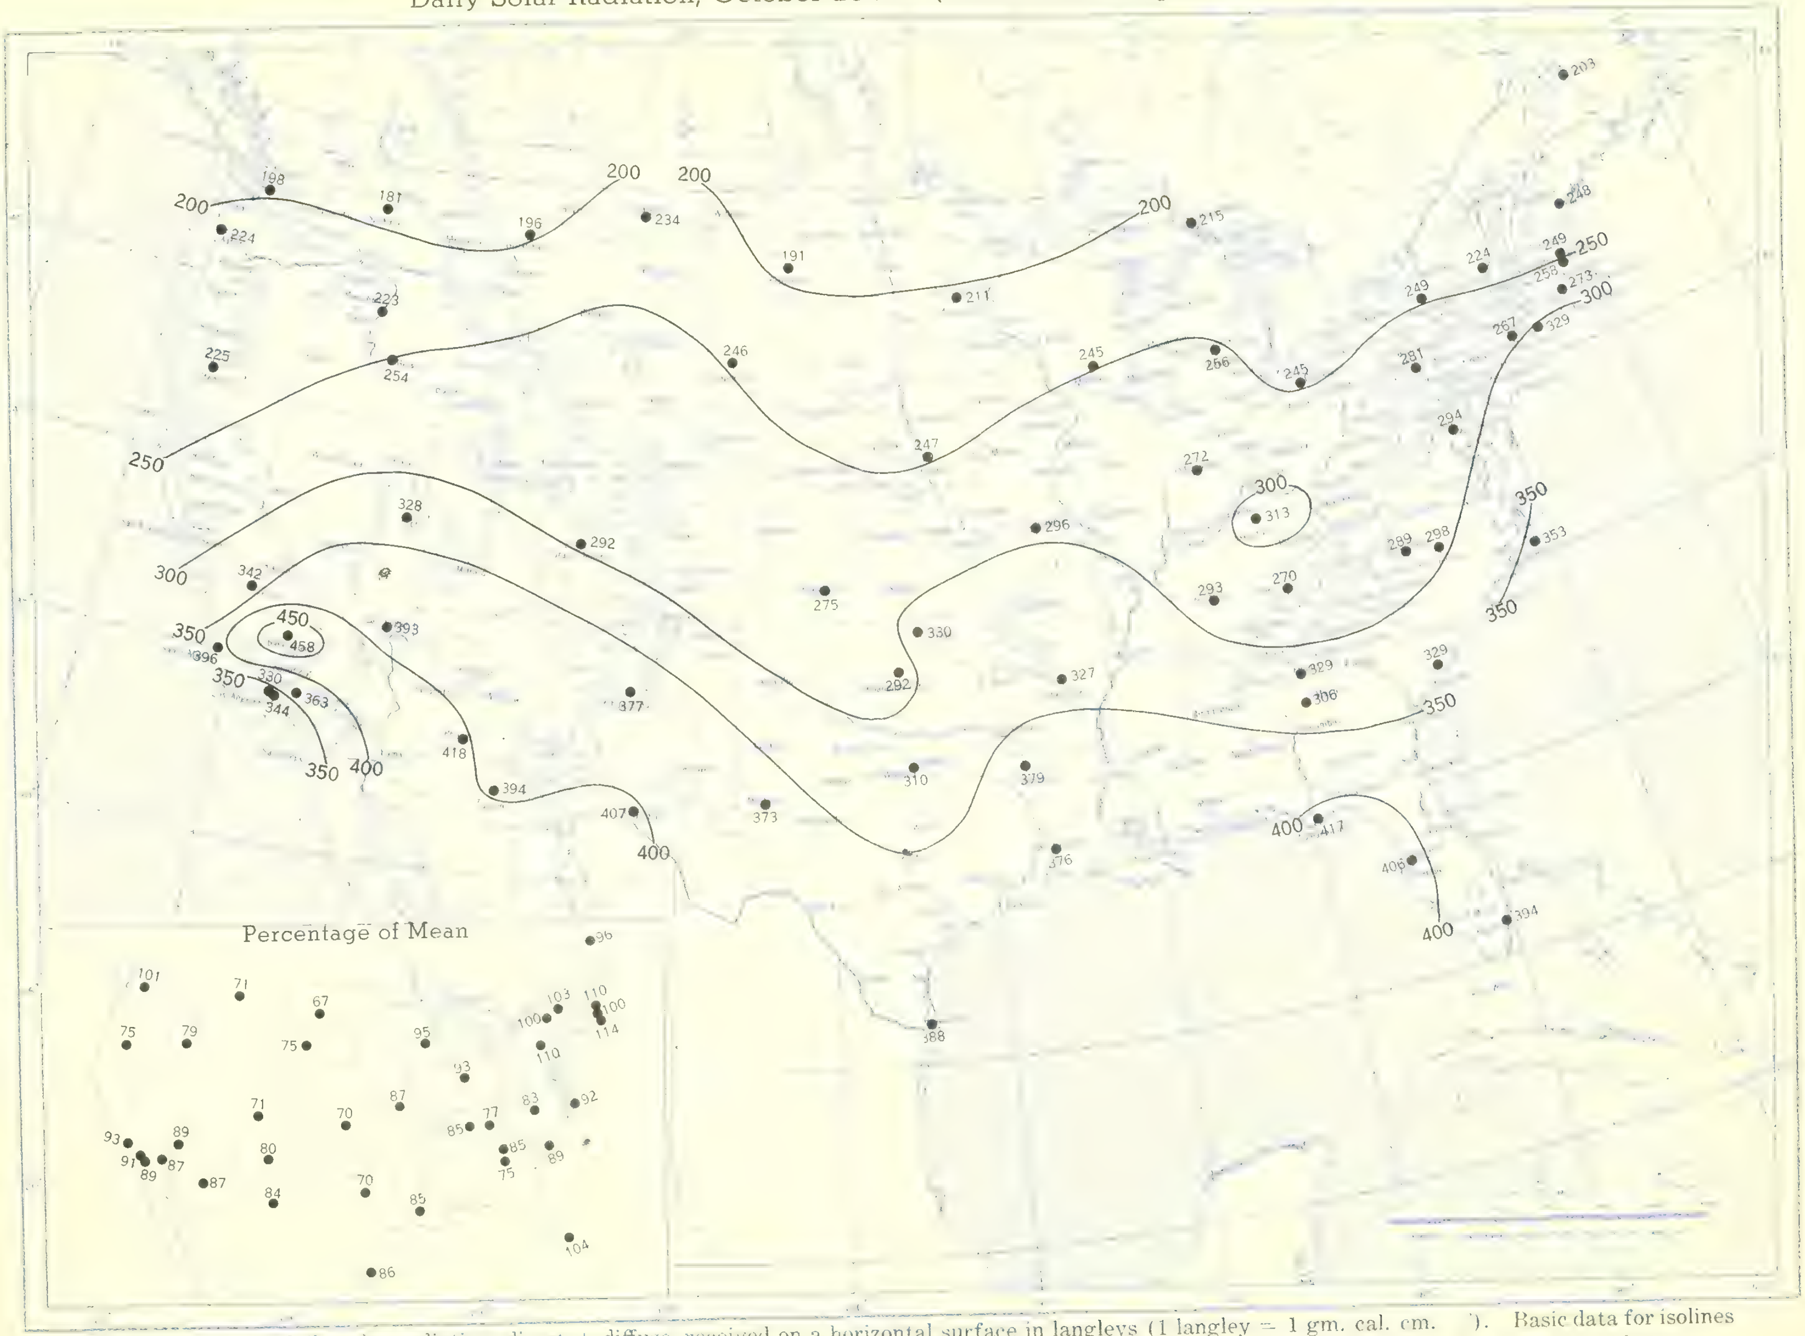


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

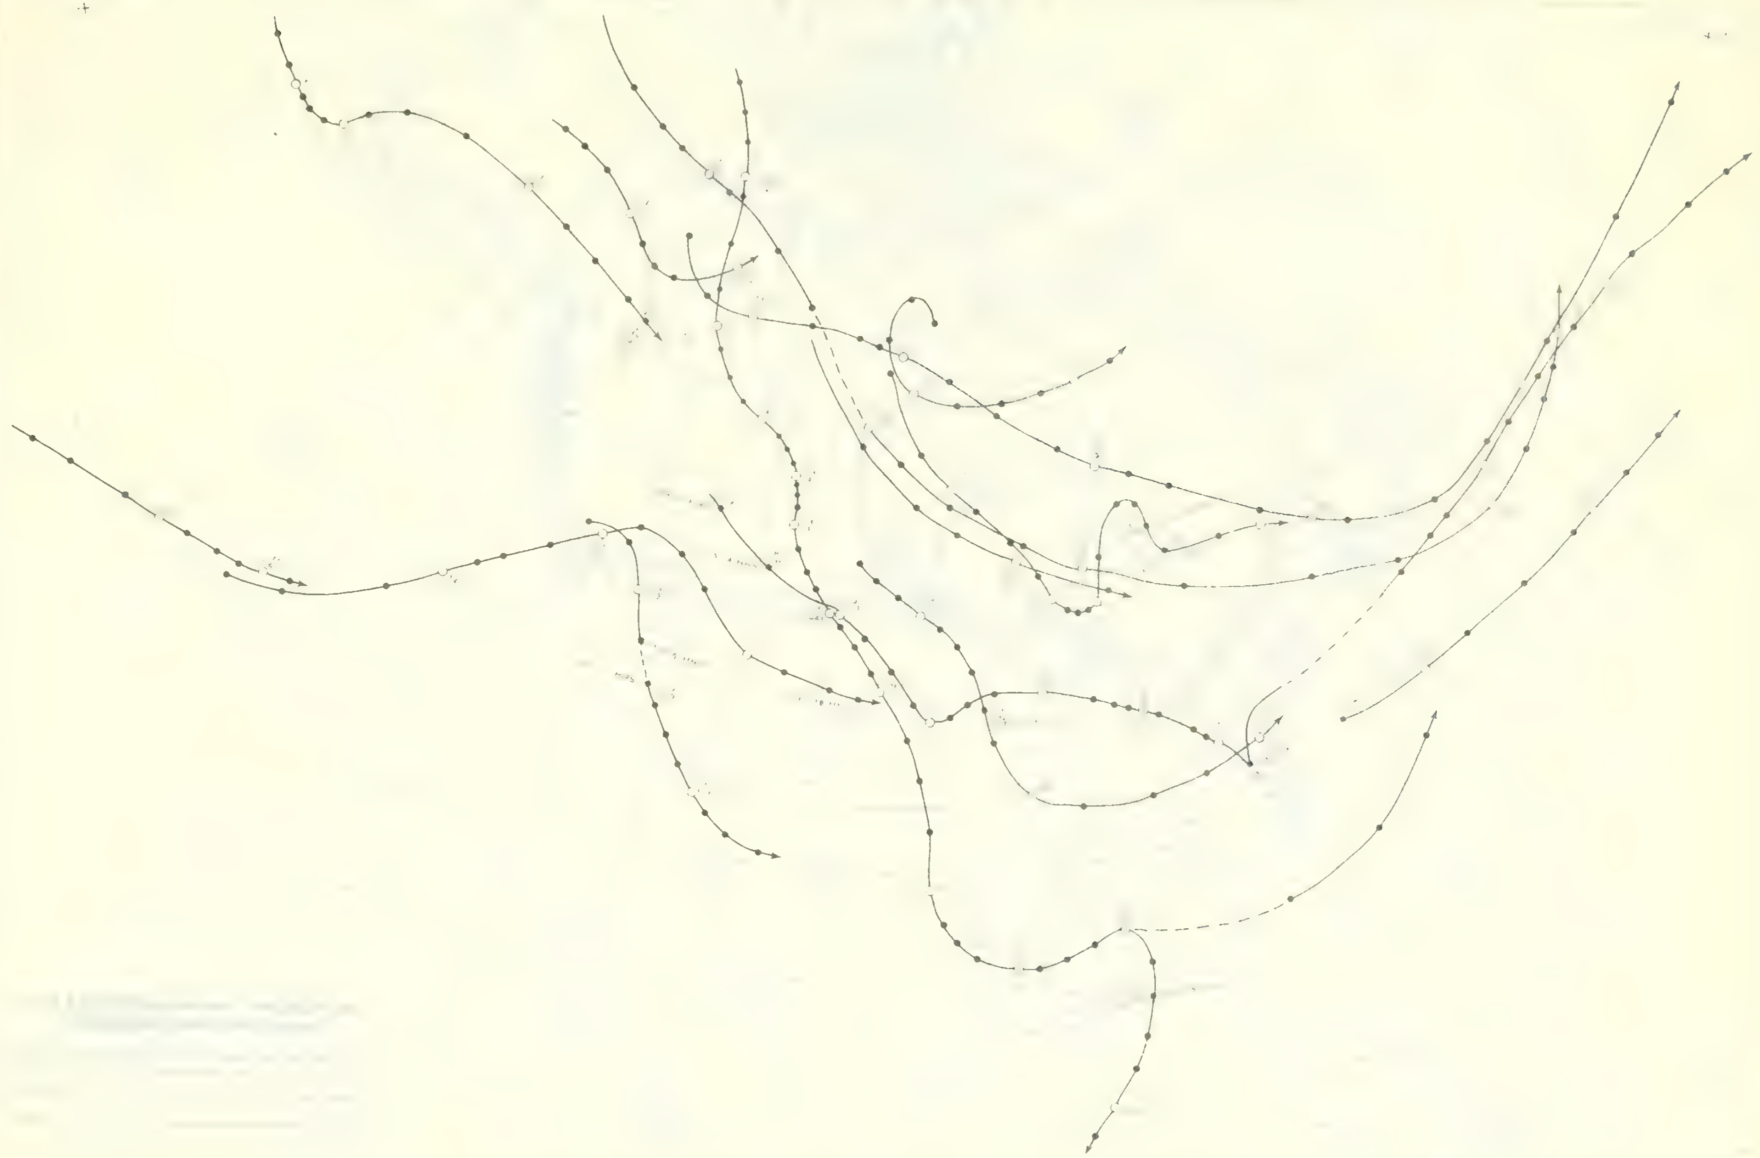
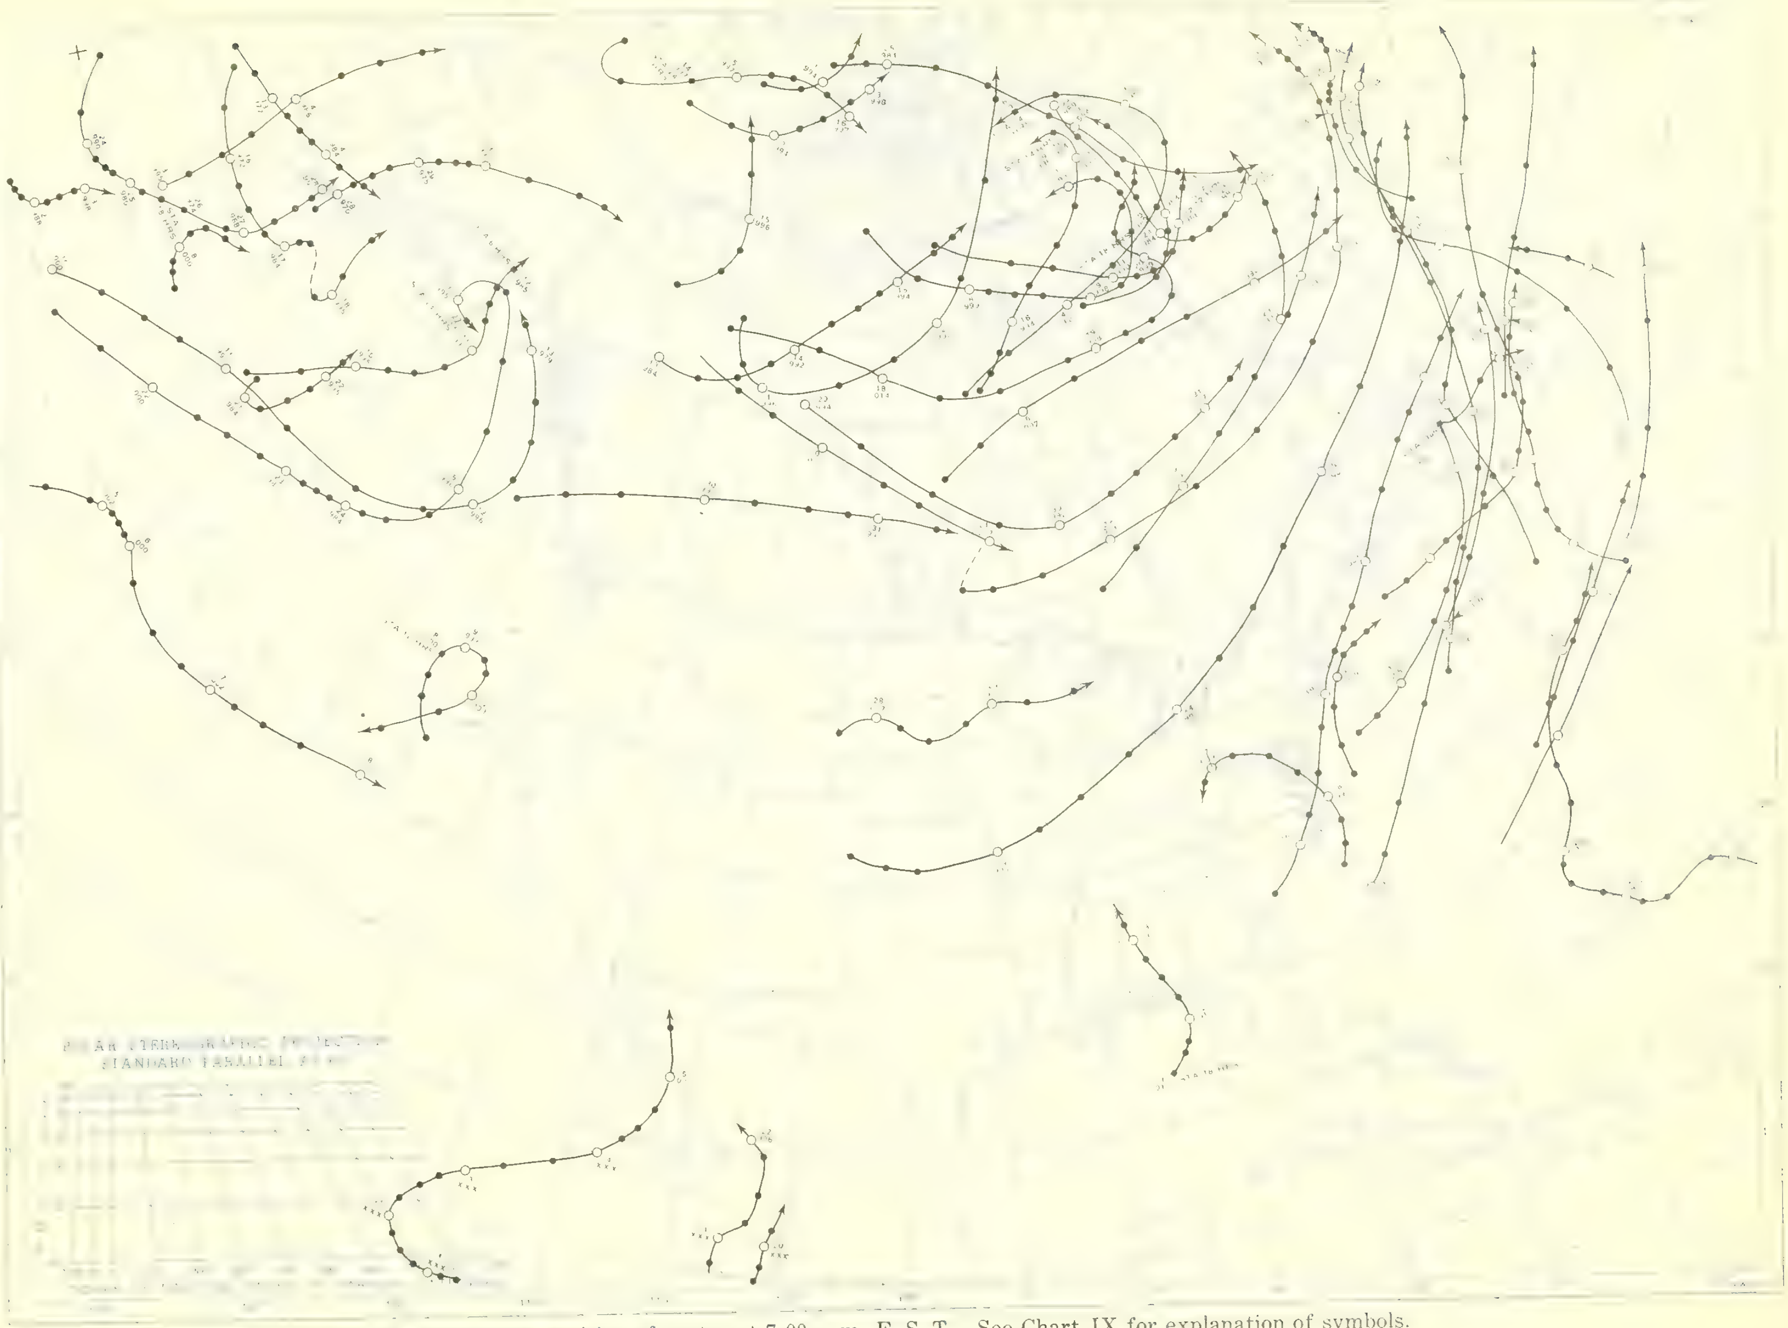
Chart IX. Tracks of Centers of Anticyclones at Sea Level, October 1957.



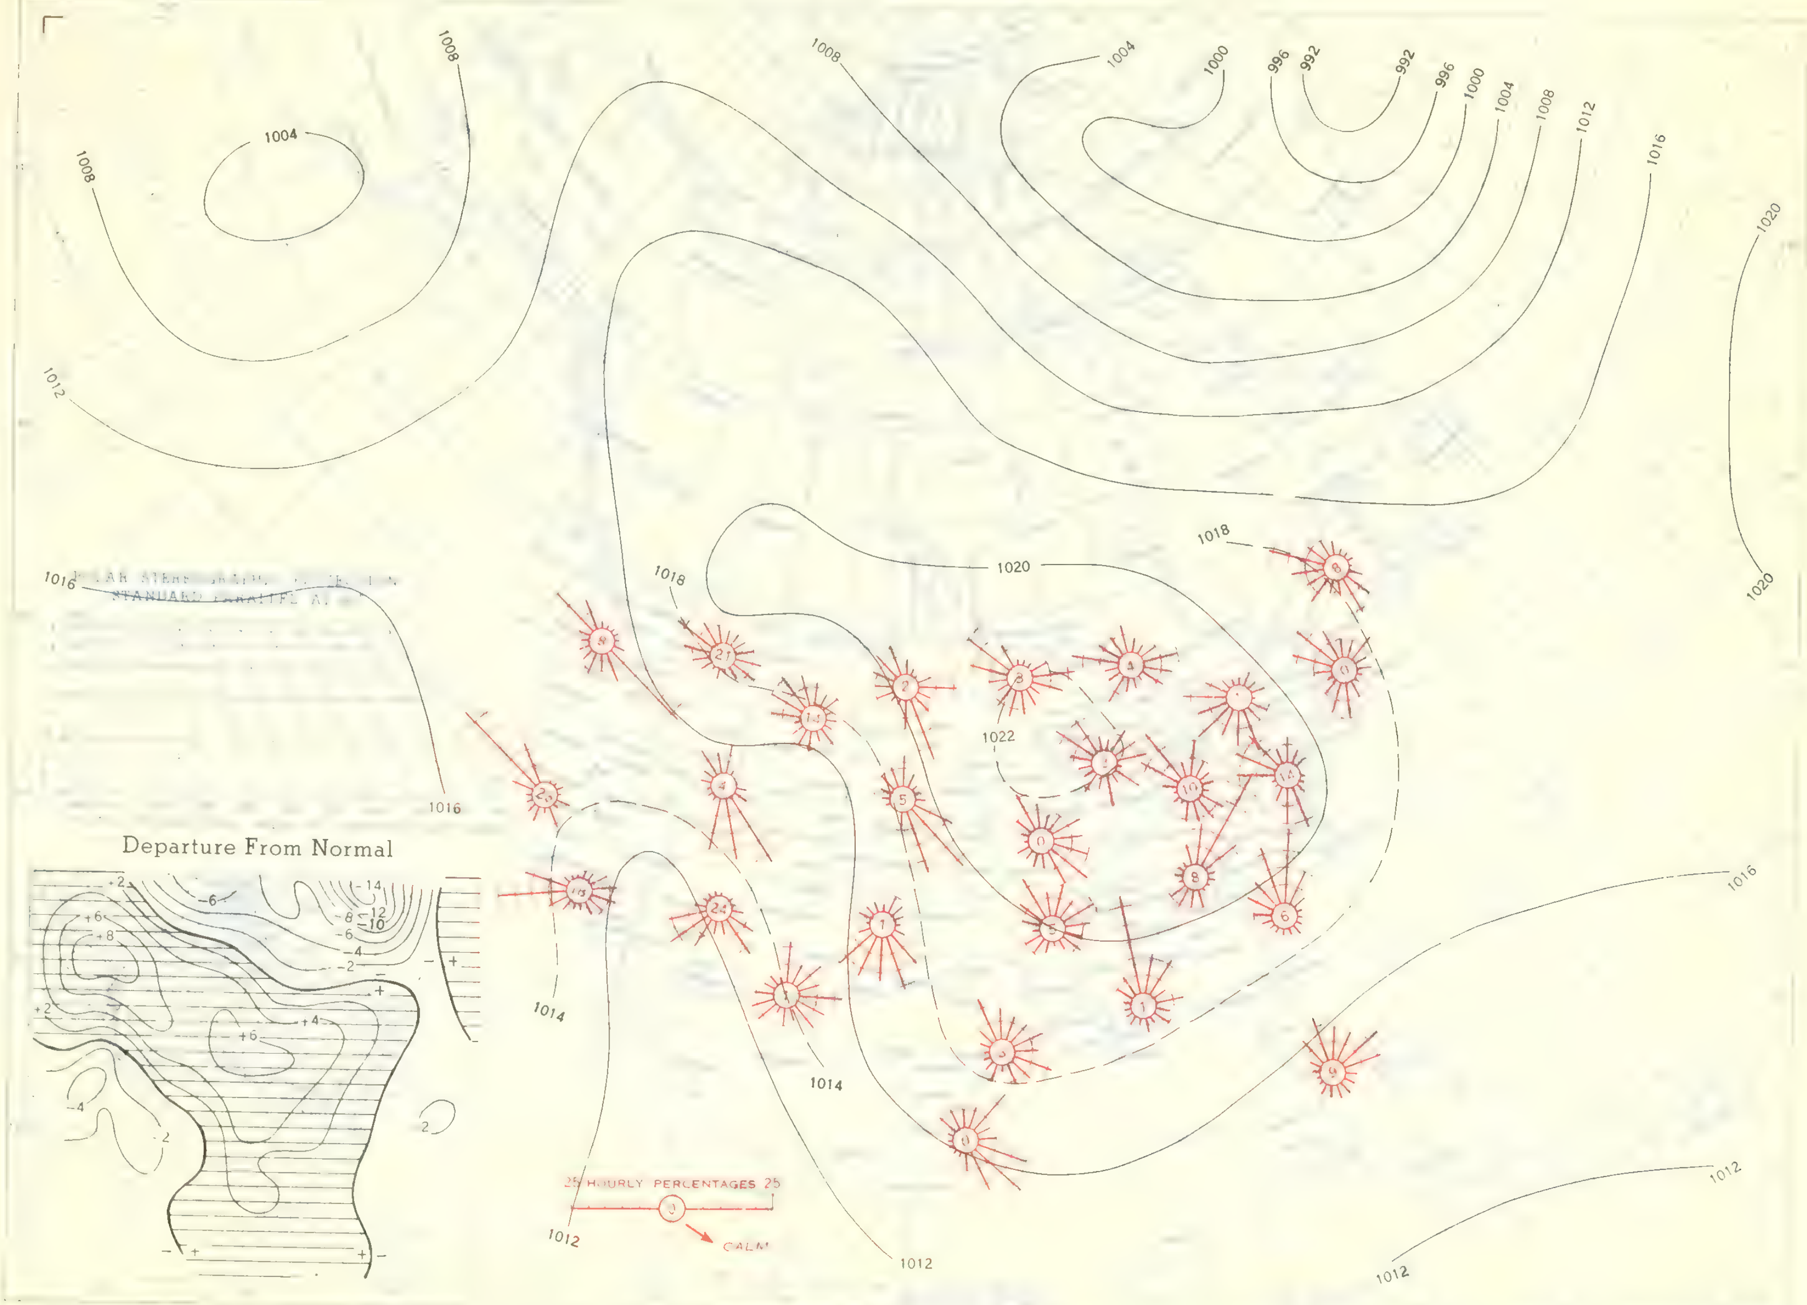
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track

Chart X. Tracks of Centers of Cyclones at Sea Level, October 1957.



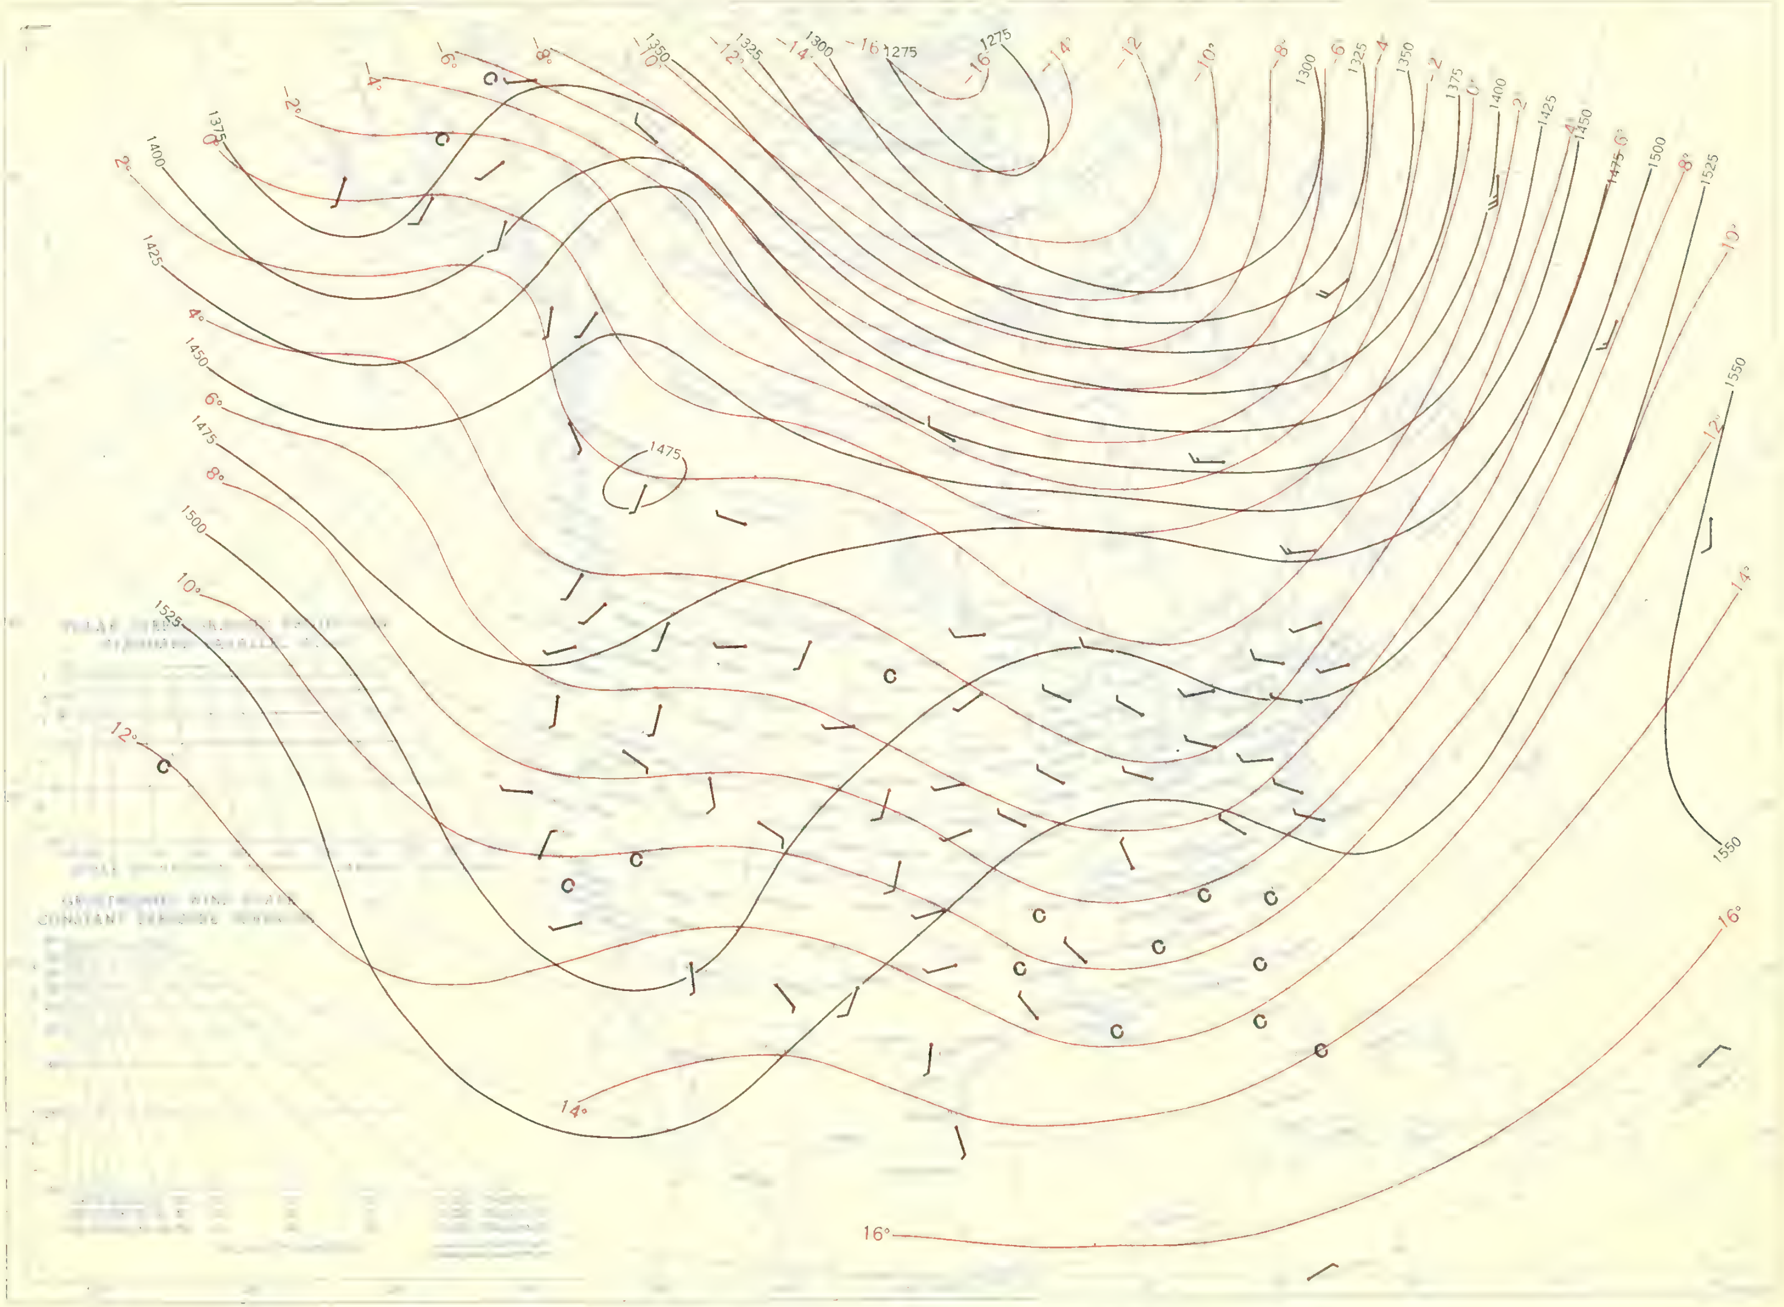
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, October 1957. Inset: Departure of Average Pressure (mb.) from Normal, October 1957.



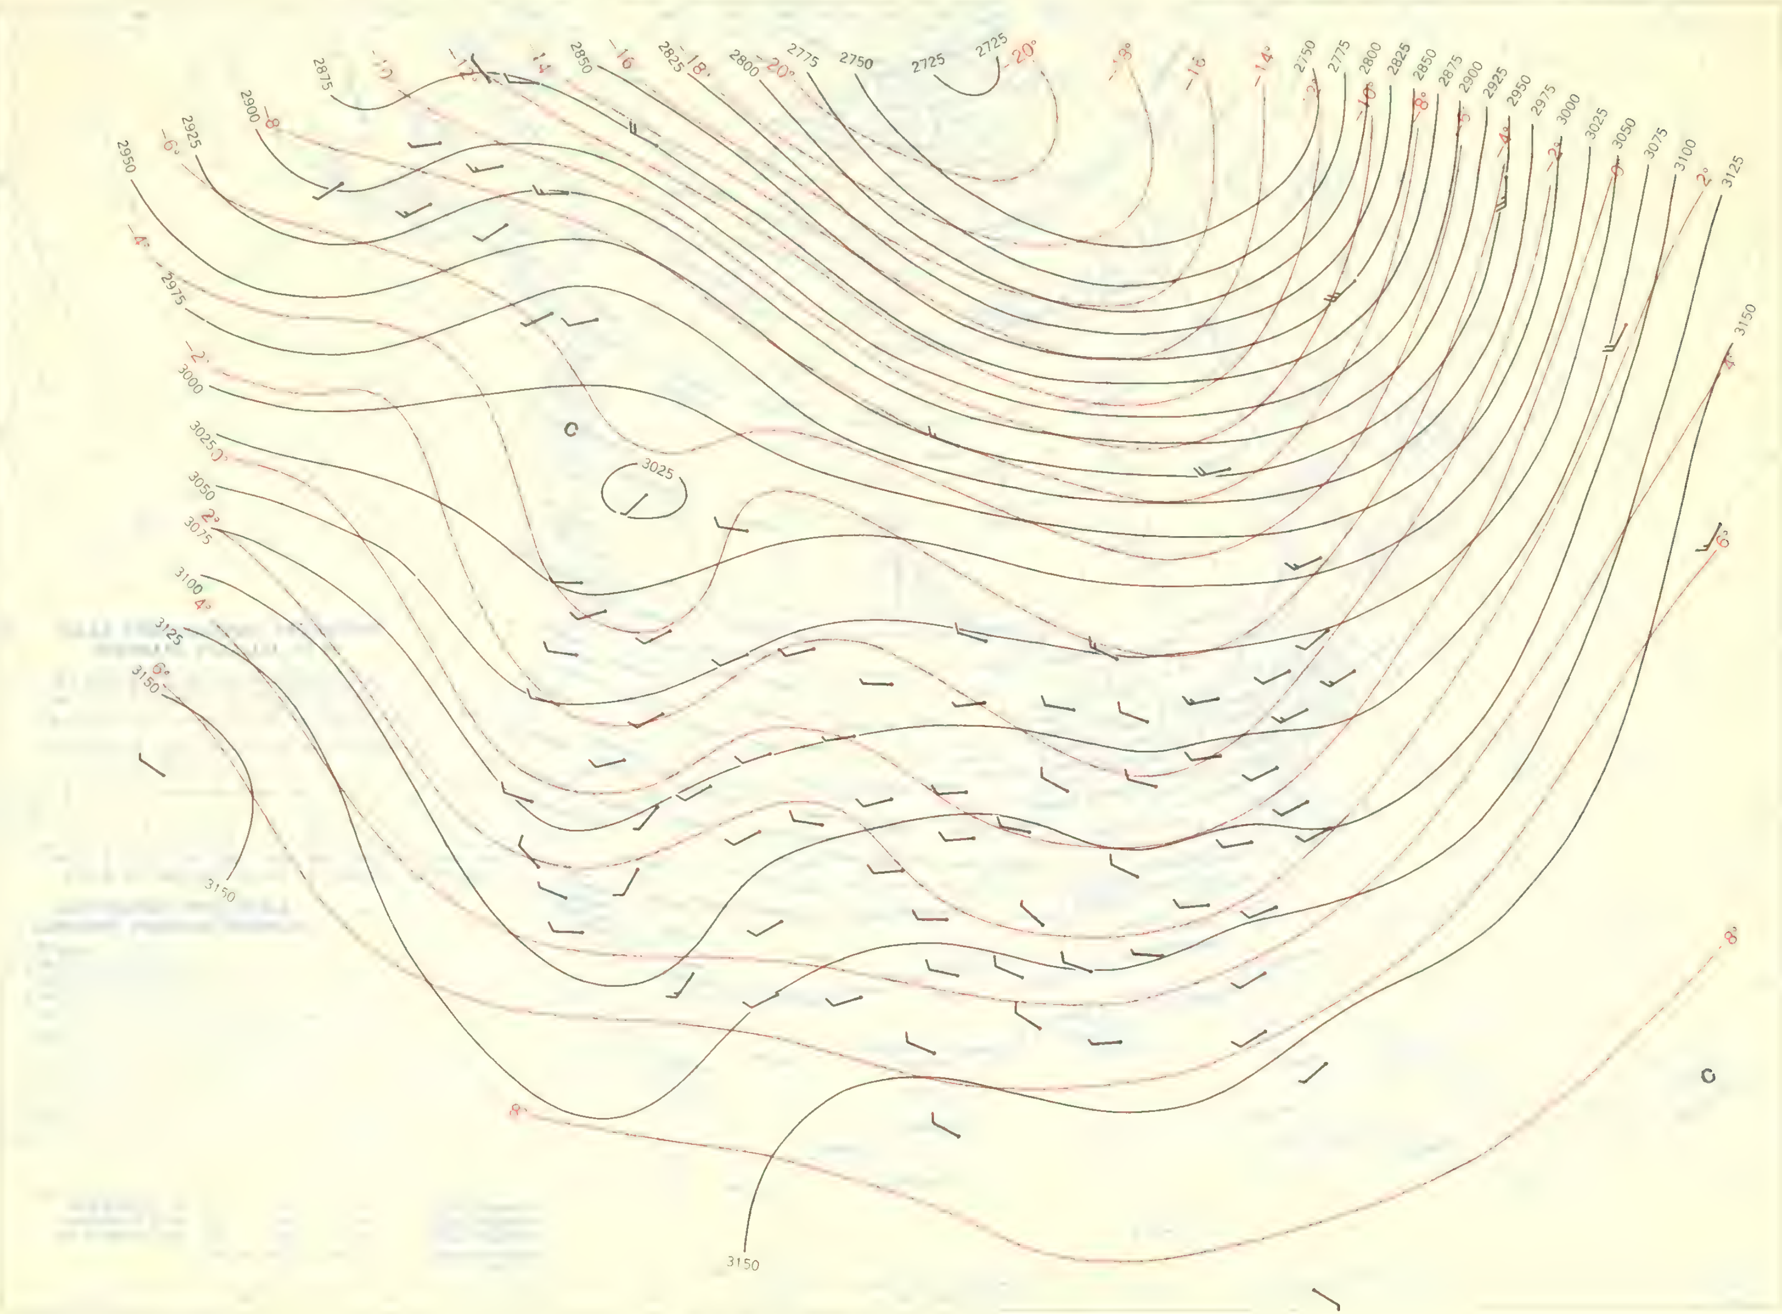
Average sea level pressures are obtained from the averages of the 7:00 a. m. and 7:00 p. m. E. S. T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° inter-

Chart XII. 850-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



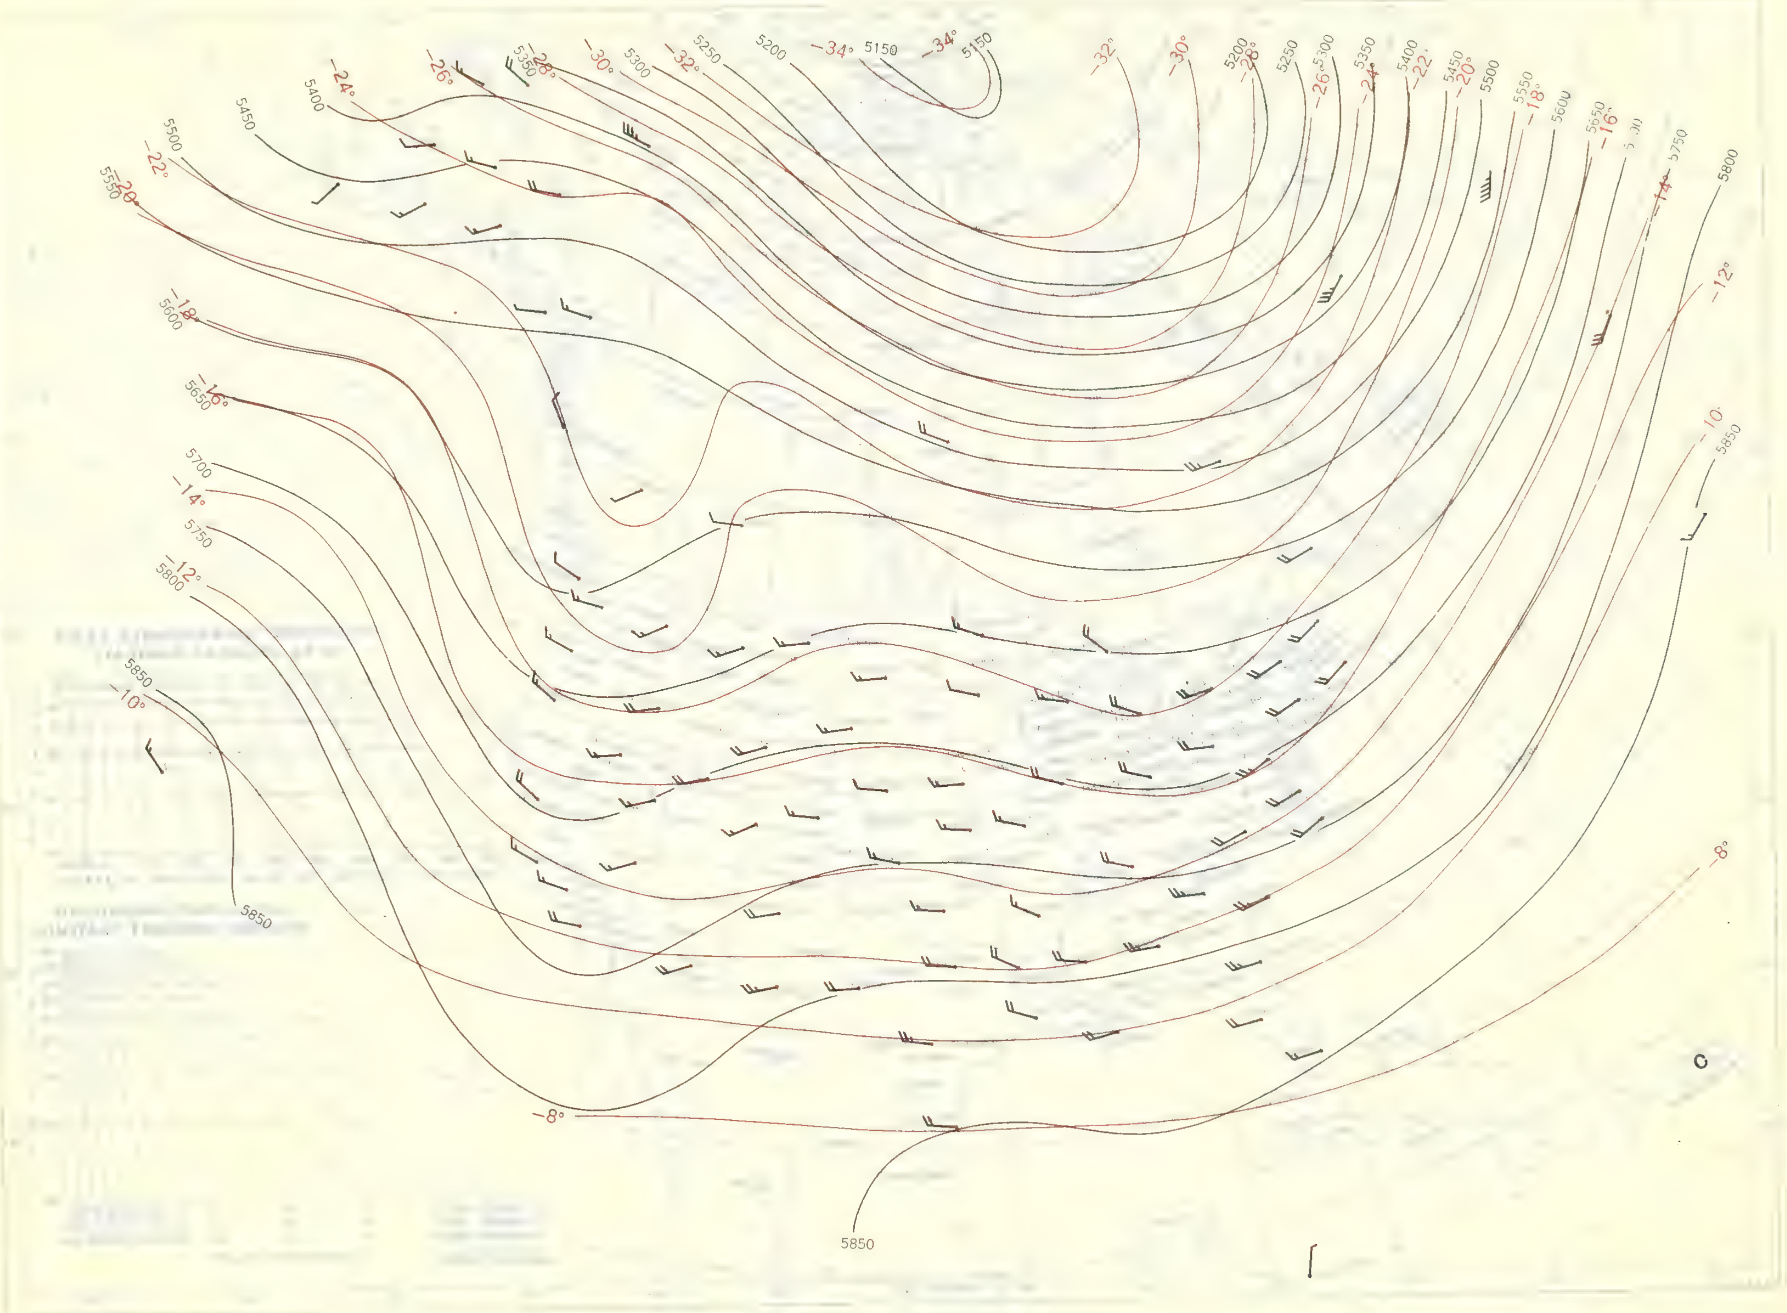
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



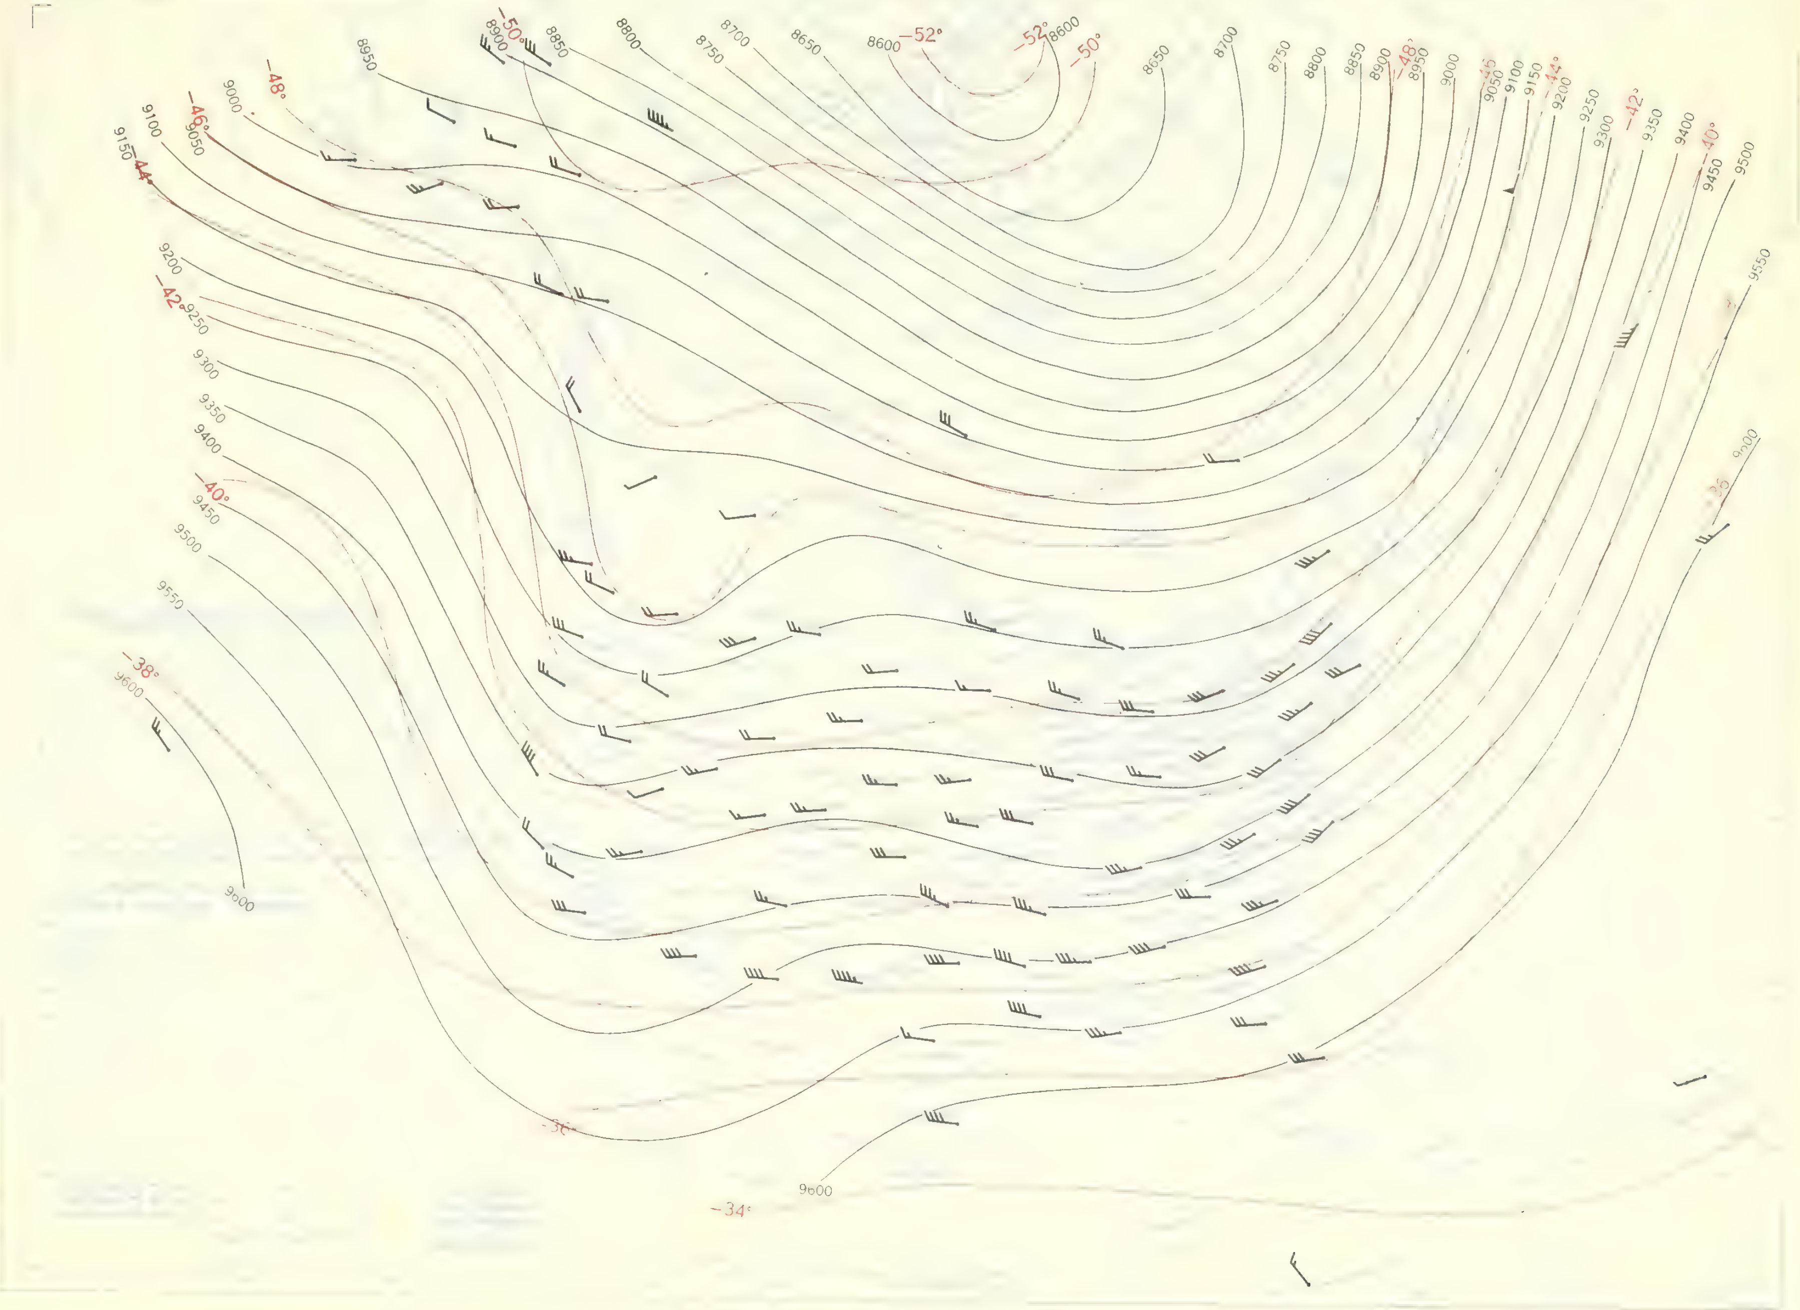
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



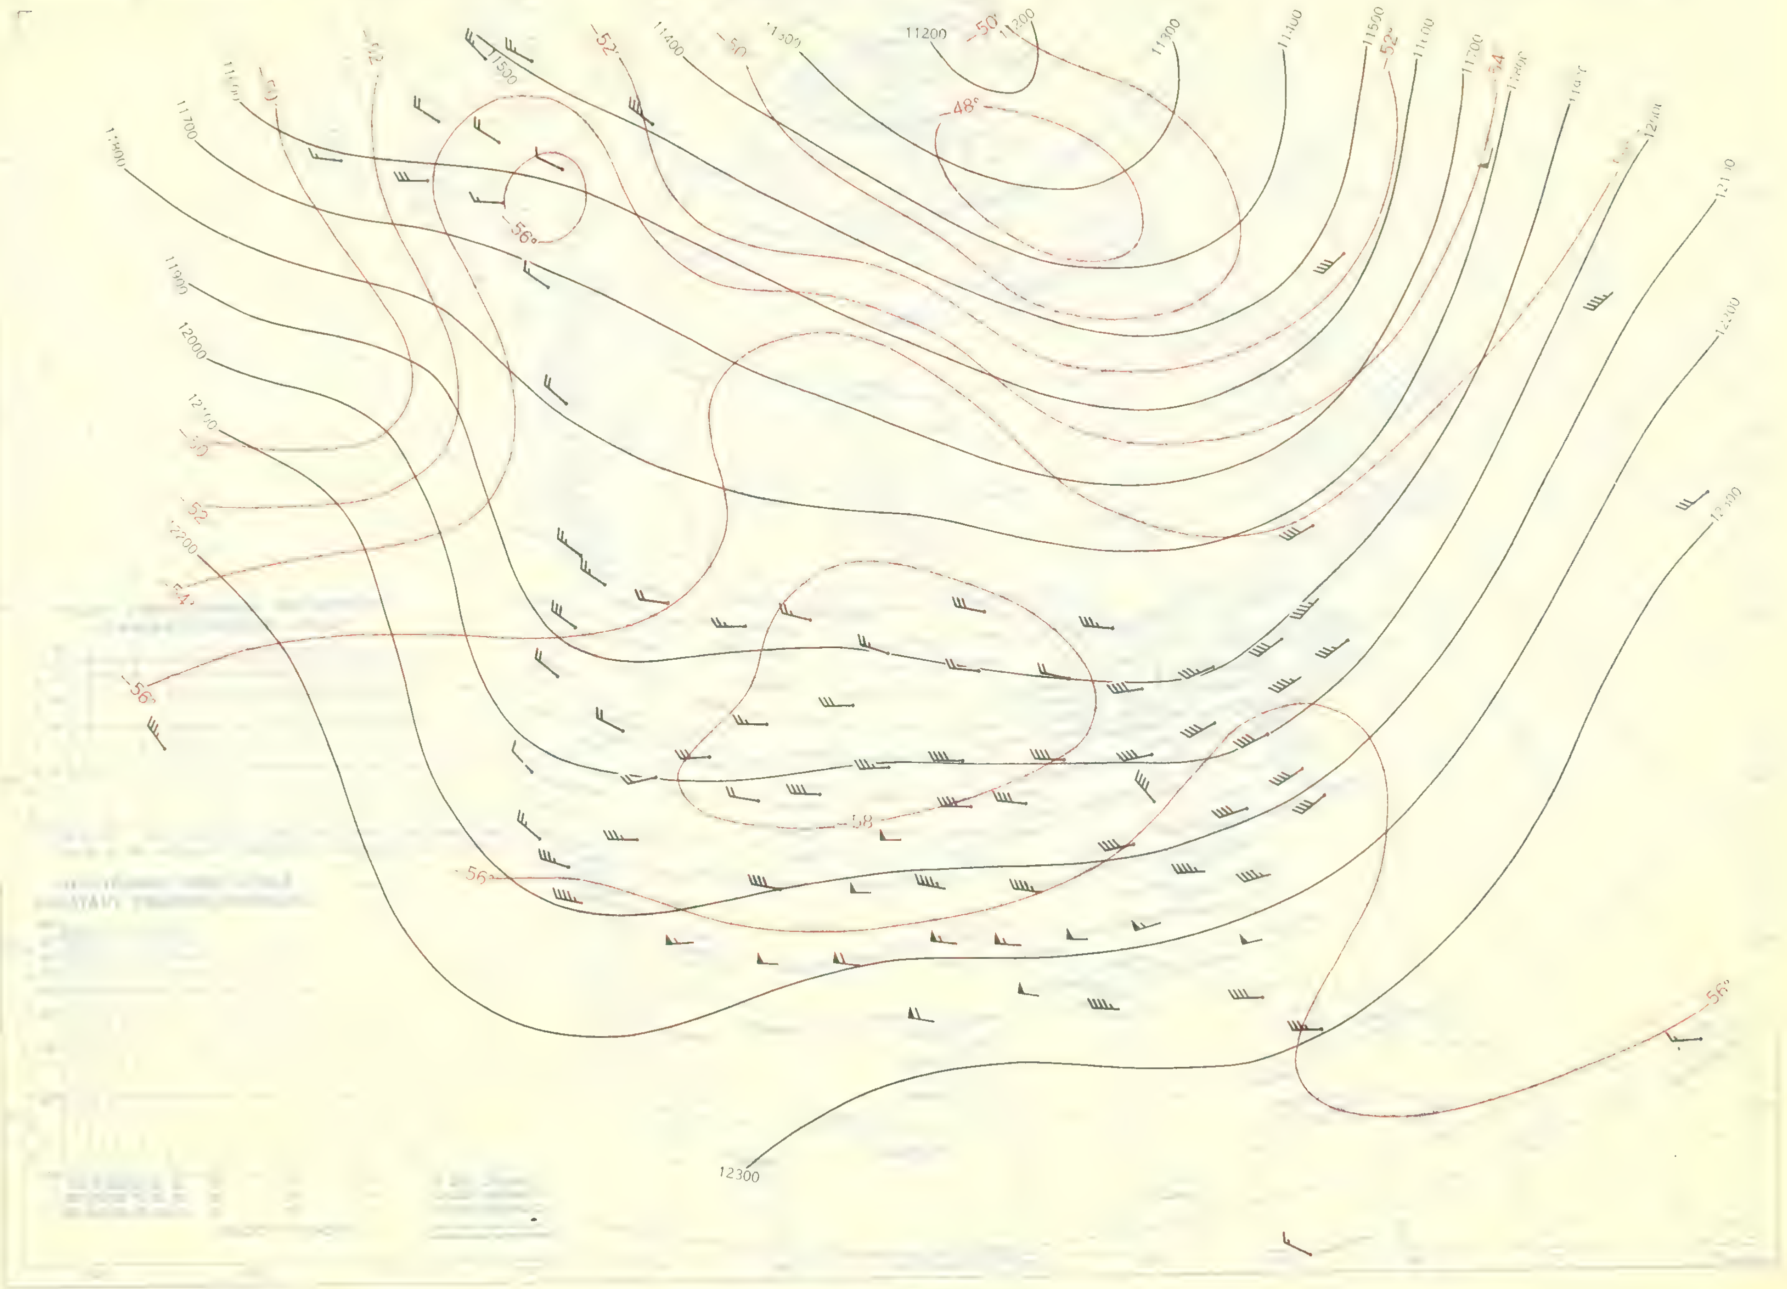
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



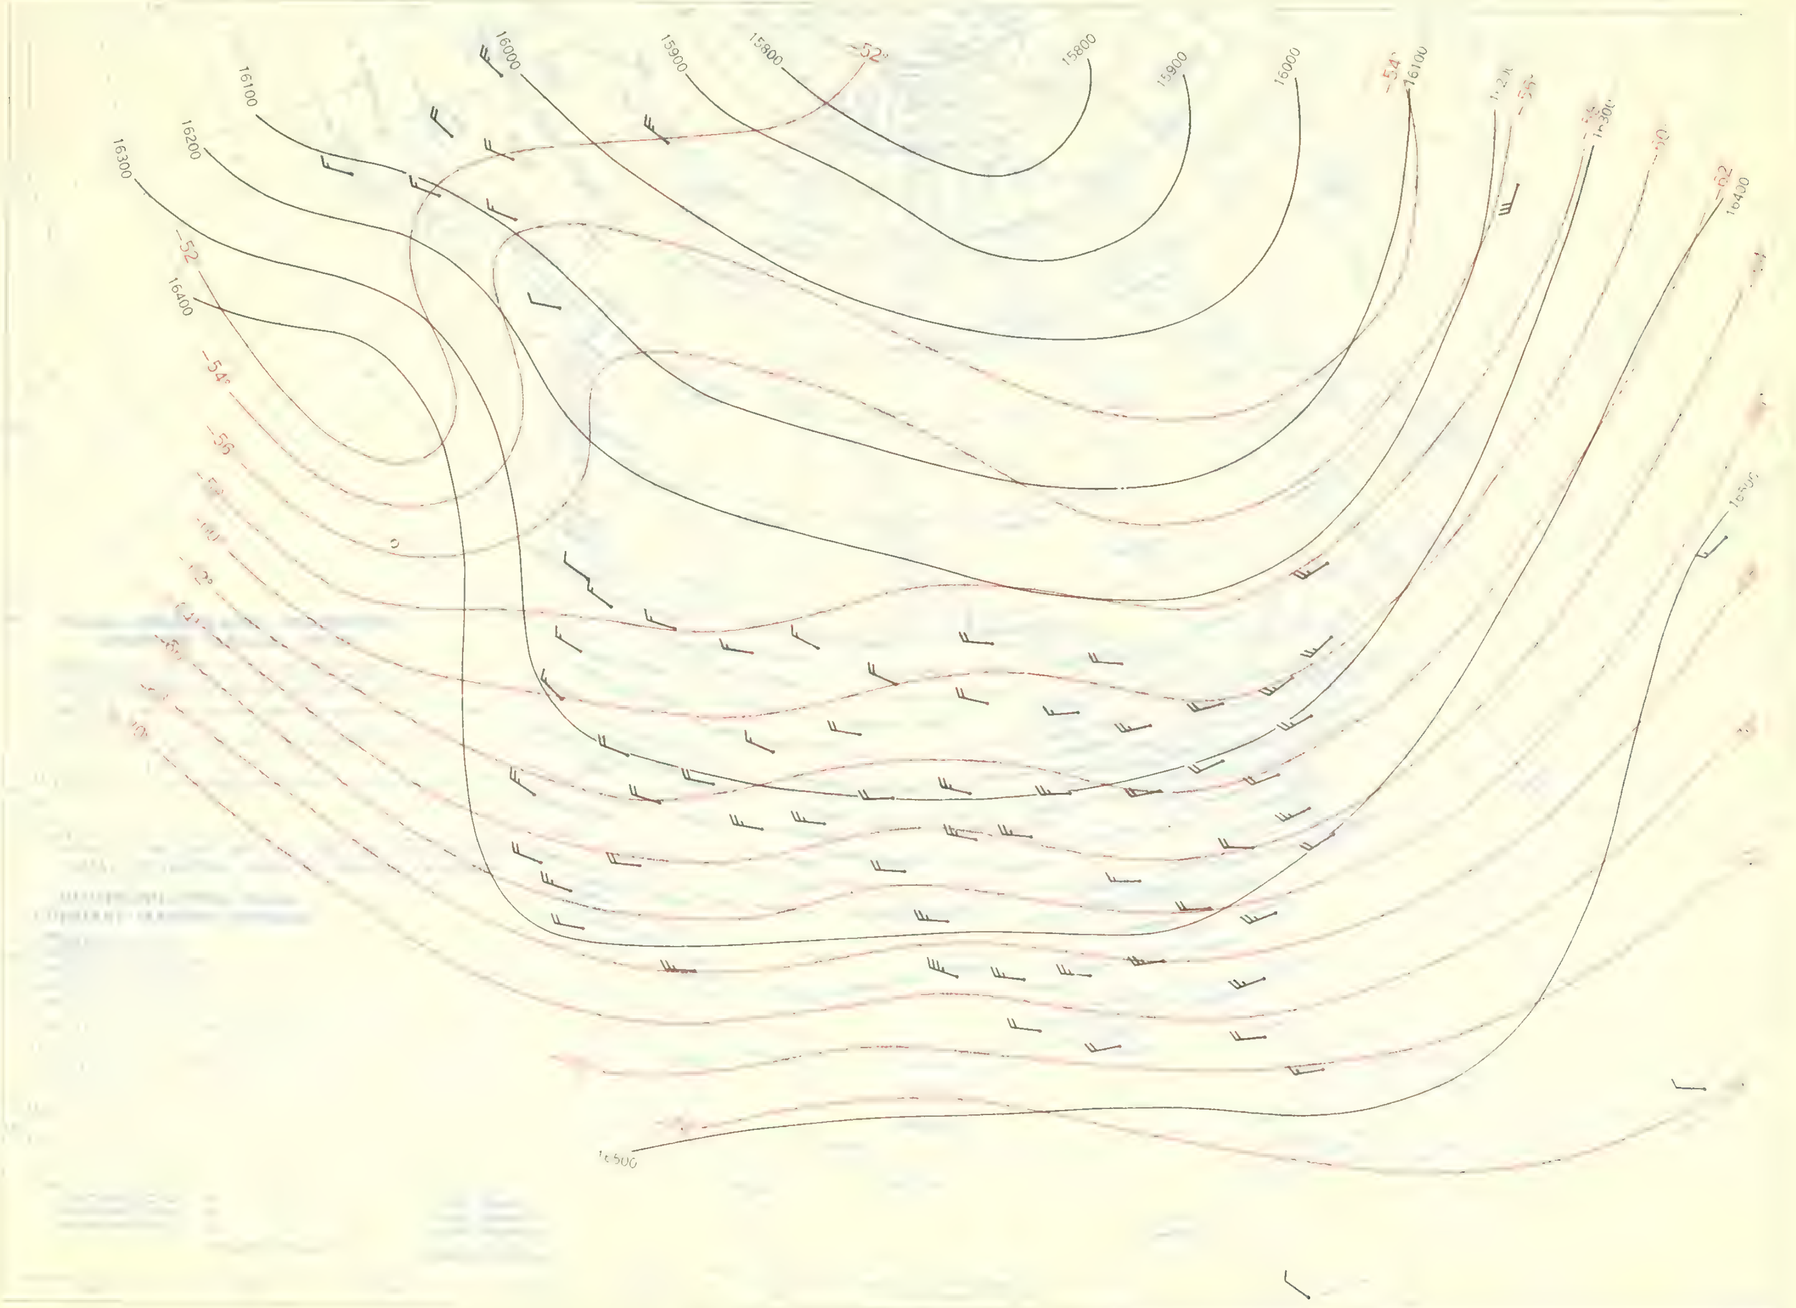
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, October 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 11

NOVEMBER 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

November weather was stormy, wet, and cloudy in most sections of the country, and unseasonably cold in the Southwest. Generous precipitation helped relieve water shortages brought on in parts of the Northeast by summer and early fall drought, but delayed harvesting in the Midwest and South. Heavy rains caused widespread mostly minor flooding in the South. Tornadoes were unusually numerous for November in south-central areas, and record snowfall was recorded at points in the central Great Plains. At the end of the month soil moisture was ample over the entire country.

TEMPERATURE.--The month was among the coldest Novembers on record in Texas and the Great Basin where rather persistently subnormal temperatures averaged as much as 6° below normal. Amarillo, Lubbock, and Dalhart, Tex., on the 23d recorded lows of 3°, -1°, -1° respectively, record lows for November at all 3 stations.

Elsewhere temperatures were characterized by frequent and sometimes sharp changes with the passage of numerous alternate high and low pressure areas, but generally averaged a little above normal. Montgomery, Ala., recorded a late season high of 85° on the 16th and Portland, Maine, an early season low of 6° on the 27th. Navigation closed in the Mississippi River at Minneapolis, Minn., on the 30th, 3 days later than in 1956. Extreme temperatures for the month ranged from 93° at Tamiami Trail, Fla., on the 10th to -37° at Frazer, Colo., on the 22d.

Cold Polar air began pouring into the Pacific Northwest on the first days of the month and by the 4th had spread across the entire Nation reducing temperatures to subnormal levels which were maintained in most sections until the end of the first decade as cold air continued to pour southward. On the 8th and 9th daytime temperatures at many north-central stations remained near or below freezing, and Minnesota and New York State recorded their first subzero minima of the season.

The first decade was followed by a week of above normal temperatures, except in the Great Basin areas of the Far West where temperatures for the week ending the 18th again averaged as much as 6° below normal. The week ending the 25th was abnormally cold west of the Appalachians except in the northwestern Great Plains and along the California coast where temperatures were well above normal. As the month ended cold air was moving across the Deep South where temperatures were already below freezing at many stations.

PRECIPITATION.--Precipitation was abundant and above normal in most of the country, with less than 75 percent of normal in appreciable areas only in northern and extreme southern sections west of the Continental Divide. Monthly totals were over 400 percent of normal in parts of the Southwest and over twice normal in most of the South and in a belt extending from New Mexico and northern Arizona to southeastern Montana.

New record totals for November were reported from Cairo, Ill., 13.05 inches; Louisville, Ky., 9.12; Winston-Salem, N.C., 7.15; and Brownsville, Tex., 6.26 inches. Monthly totals ranged up to 19.41 inches at Woodworth State Forest in Louisiana, and up to 15 inches or more in Kentucky, Mississippi, North Carolina, Tennessee, Arkansas, and Missouri, and 10 inches or more in Alabama, Florida, South Carolina, Illinois, Indiana, and Texas. Even more significant minimum totals exceeded 5 inches in Mississippi and 3 inches in Maine, New Hampshire, Tennessee, Arkansas, and Louisiana.

Early in the month a Gulf storm produced 6 to 8 inches of rain in northeastern Texas, resulting in a record flood crest of 45.6 feet at Hagansport on the Sulphur River, and some lowland flooding along the Trinity River and in the Sabine River above Logansport, La. During the third week widespread flooding occurred from Texas eastward and in the lower Ohio Drainage Basin.

In New Jersey, southern New England, and some adjacent areas of nearby states, hard hit by summer and fall drought, 2 to over 4 inches of precipitation either replenished or maintained adequate topsoil moisture for fall-planted crops, but was not sufficient to relieve water shortages which remained serious in some sections.

Elsewhere in the Nation water supplies and soil moisture were ample to excessive. Frequent rains and resulting muddy fields delayed the late harvest of cotton and corn and caused considerable damage. Damage to cotton in Arizona by fall rains was estimated at several million dollars. Fall-planted grains remained in good condition, except in many southern lowlands where excessive moisture caused some deterioration.

Heavy snow fell from the central Great Plains to the Great Lakes during a storm on the 17th to 19th. Concordia, Kans., and Lincoln, Nebr., measured 10.2 and 10.4 inches in 24 hours on the 17th and 18th, new 24-hour records at both places for November. Lander, Wyo., measured 32.5 inches for the greatest November total there on record. On the 23d San Antonio, Tex., had measurable snowfall for the first time in November, and on the same date Corpus Christi, Tex., saw its earliest snowfall on record.

DESTRUCTIVE STORMS.--Tornadoes, the most damaging type of storm of the month, were unusually numerous and destructive for November. The worst outbreak of these storms occurred in Texas and Louisiana on the 7th, when several people were killed, scores received injuries, and property was damaged to the extent of several million dollars. A second outbreak, only slightly less severe, occurred in Mississippi and Alabama on the 18th.

Winds caused considerable damage in many sections of the Northeast on the 8th and 9th, Indiana on the 14th, in northern Washington on the 25th, in Texas on the 27th to 29th, and southern California on the 29th and 30th. Glaze caused several thousand dollars damage in southeastern Wyoming on the 2d to 4th, and heavy snowfall in Nebraska on the 17th and 18th was responsible for heavy crop damage.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA Garvin County	1	8 a.m.			1				Electrical	Lightning struck and killed 13-year old boy while herding cattle.
SOUTH DAKOTA Fairfax, Gregory County	1	Afternoon				1	2		Electrical	Lightning entered residence through telephone line. 1 person slightly cut when lightning arrester shattered. Plaster knocked from wall around telephone and several appliances burned out.
TEXAS Lake Whitney (near), Bosque and Hill Counties	1	5:28 p.m.			0	0			Funnel aloft	Pilot reported small funnel aloft.
	1									Minor storms also reported in Lawrence County and in northern Black Hills, S. Dak.
MONTANA Red Lodge, Carbon County	1-2		25	*12			1	4	Snow	Snow covered beets in ground and dry beans not harvested. One of heaviest November snowstorms ever experienced in this section. Storm moved southeastward.
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, AND VERMONT	1-3				6	Many	3	1	Rain	Heavy rains very beneficial, but minor damages from a few washouts. Phone cables flooded at Waterville, Maine, and Hyannis, Mass. Rain said to be factor in numerous automobile accidents involving deaths and injuries.
COLORADO Southwestern portion	1-7								Rain, hail, and snow	Continued rain, hail, and snow the first week in November did heavy damage to crops still in fields because of previous wet weather. About one-third of bean crop could not be harvested. Baled hay which was thoroughly soaked will be complete loss. 1 potato farmer in Mancos area had estimated loss of $4,000 in potatoes rotting in fields. Wet field conditions also prevented fall planting of grain.
CALIFORNIA Napa and Solano Counties	2						3		Wind	Strong northerly winds blew down trees and powerlines in Benicia, Napa, and Vallejo. In Vallejo, 28-foot neon sign blown onto roof of apartment house.
ARIZONA Northern and Central portions	2-3-4				1				Rain	3-day rainstorm caused flooding of rivers and streams. Boy drowned in flash flood 12 miles southeast of Cottonwood and some 200 deer hunters stranded in mountains. Several roads and highways washed out, otherwise property damage light. About 5,000 acres of cotton land near Maricopa flooded, but damage not extensive.
WYOMING Southeastern quarter	2,3,4					Some	3	4	Ice	Storm was result of long period of freezing drizzle. Because of nature and length of time of storm, boundaries of area affected were very indefinite. Heavy damage to telephone and powerlines, considerable damage to trees and bushes, and some automobile accidents resulted from storm. A few injuries from automobile accidents, but no fatalities. Because of nature of damage, it is almost impossible to assess property damage or actual number of injuries. Crop damage mostly to alfalfa because of seed that could not be harvested.
CALIFORNIA San Diego, San Bernardino, and Riverside Counties	3						4		Wind and rain	Strong, gusty winds, with locally heavy rain, blew down trees and television antennas. Many powerlines snapped by falling branches. Sections of roof on Air Force radar station on Mt. Laguna ripped off by wind, reported reaching gusts of 110 m.p.h. Heavy rain in nearby foothills flooded some intersections in San Bernardino. In Borrego Valley, strong gust of wind blew down wall of home under construction.
	3									Minor storm also reported at Brigham City, Utah.
CALIFORNIA San Gabriel Mountains, San Gabriel and San Fernando Valleys	5					1	3		Electrical, rain, and snow	Lightning struck tree in Pasadena, breaking windows in 3 nearby homes, and damaging parked automobile. Occupant of 1 home treated for shock. 5 inches of snow fell on Kratna Ridge in San Gabriel Mountains. Locally heavy downpours occurred in valleys.
MISSOURI Bootheel area	6-18				1	100			Rain	Following unusually wet year, excessive rains moved back into Bootheel counties, (Pemiscot, Dunklin, New Madrid, Mississippi, Scott, Stoddard, Butler, and Cape Girardeau) about November 6. These rains continued off and on through November 18. Many Bootheel stations got from 8 to over 15 inches in November, most of which came during November 6 to 18. Thousands of acres of croplands under water several times.

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MISSOURI (Cont'd.)										Basements of homes and business buildings flooded. Estimated 50,000 bales of cotton will be unfit for picking, and much cotton that was harvested was of lower quality because of rains. Boy drowned on November 14 in drainage ditch near Portageville.
LOUISIANA Lecompte-Cheneyville area, Rapides Parish	7	1 p.m.	1/2	880			4	3	Wind	Severe thunderstorm damaged 4 farm homes and several barns; moved eastward.
LOUISIANA Robson to Fillmore, Caddo and Bossier Parishes	7	2-2:30 p.m.	15	100	0	0	°4	C	Tornado	Moved northeastward over mostly wooded land, followed by State Police for time; 1 home damaged in Fillmore; much timber lost, and powerlines downed.
LOUISIANA Lowry to Iota (near), Cameron, Jefferson Davis, and Acadia Parishes	7	2:30-3 p.m.	15	50	0	0	4	3	Tornado and funnel aloft	Began as tornado near Lowry then lifted to pass near Jennings and Iota as funnel cloud aloft; 1 house destroyed and 1 damaged. Storm moved north-northeastward.
INDIANA Evansville, Vanderburgh County	7	Afternoon					4	1	Rain	Heavy rain flooded streets and basements.
ARKANSAS Sheridan, Grant County	7	4:30 p.m.					5	1	Electrical	Roof of auditorium of high school collapsed when supporting beam struck by lightning. Extensive damage to building and contents.
LOUISIANA Torras, Pointe Coupee Parish	7	4:50 p.m.	3	50	0	5	5	3	Tornado	15 homes and farm buildings destroyed and 7 homes and buildings badly damaged. Tornado moved northeastward.
LOUISIANA Iota, Acadia Parish	7	5:25 p.m.	5				4	3	Wind	1 warehouse badly damaged. Storm moved northward.
LOUISIANA Leesville (2 miles west of), Vernon Parish	7	8:35 p.m.			0	0	4	1	Tornado	3 buildings destroyed and 2 badly damaged; reported by State Police.
TEXAS China and Nome, Jefferson County	7	8:45 p.m.			0	0	4		Tornado	Slight to moderate dwelling damage. Tornado moved southeastward.
LOUISIANA Boyce to Alexandria, Rapides Parish	7	9-9:15 p.m.	13	50-75	3	16	6	3	Tornado	Widespread minor damage occurred outside path of this tornado; tornado tore through 10-block area of Alexandria, moving from northwest corner to southeast; 98 homes and 6 other buildings destroyed, while 137 homes and 3 other buildings heavily damaged; 318 buildings minor damage.
TEXAS Groves, Jefferson County	7	9:15 p.m.	3	200	2	59	6		Tornado	160 homes, several business buildings and many outbuildings completely demolished or extensively damaged in area of 15 to 20 blocks in center of town. Several hundred damaged to lesser extent, 1 school badly damaged. Electric power entirely out for 1 hour. Gas mains broken at several points, thousands of telephones cut off. Winds estimated greater than 100 m.p.h., where tornado struck. Lasted only about 5 minutes. Storm moved east-northeastward.
TEXAS Port Acres, Jefferson County	7	9:23 p.m.			0	1	5		Tornado	About 20 houses extensively damaged or destroyed in southeastern residential area. Tornado moved east-northeastward.
LOUISIANA Vinton to Sulphur, Calcasieu Parish	7	9:40-10:25 p.m.	10	2500			4	3	Wind	Storm moving eastward destroyed 1 building, unroofed several others and caused other minor damage in both towns.
MISSISSIPPI Alcorn A&M College, Claiborne County	7	10 p.m.			0	0	5	3	Tornado	No details available.
MISSISSIPPI Cruger (3 miles south of), Greenwood (10 miles east of), and Grenada (1 mile south of), Holmes, Carroll, and Grenada Counties	7	10-10:30 p.m.	20	300	2	1	5	3	Tornado and wind	Began as tornado 3 miles south of Cruger and degenerated into large area squalls as it moved northeastward; 8 homes, 16 farm buildings and radio tower destroyed; several homes and other buildings damaged.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

NOVEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Orange, Orange County	7	11:10 p.m.			1	81	6		Tornado	Several business houses destroyed, 130 homes demolished, 250 others heavily damaged; 100 families homeless. 9 ships and 3 barges torn from moorings. Thousands of telephones cut off and power disrupted. Tornado moved east-northeastward.
LOUISIANA Carencro, Lafayette Parish	7	11:30 p.m.			2	13	5	3	Tornado	Several homes and numerous farm buildings destroyed, while many received more or less damage. Tornado moved northeastward.
LOUISIANA Higginbothan to Cankton, Acadia and St. Landry Parishes	7	11:30 p.m.	8	200	4	10	5	3	Tornado	Tornado moved northeastward through thickly settled rural area, destroying 25 homes, 60 farm buildings, and causing major damage to 14 homes and 2 farm buildings; path first toward northeast and then east, with funnel lifting and dipping as it moved.
MISSISSIPPI Winston County	7	11:30 p.m.			0	0	4	1	Tornado	2 buildings destroyed and 7 damaged; no other details available.
LOUISIANA Crowley, Acadia Parish	7	11:50 p.m.	2	2500			4	3	Wind, electrical, and rain	High winds with thunderstorm uprooted trees, severed powerlines, and caused extensive minor damage. Storm moved eastward.
	7									Minor storms also reported near Stevenson and at Tallulah, La.; and at Vicksburg, Miss.
MISSISSIPPI Bond (10 miles east of), Philadelphia, Preston, and Gholson, Neshoba, Kemper, and Noxubee Counties	8	1:30-3 a.m.	30	200	0	3	5	1	Tornado	6 homes, 15 barns, and 3 other buildings destroyed; 13 homes and 18 other buildings damaged. Tornado moved north-northeastward.
TENNESSEE Pulaski and vicinity, Giles County	8	2-4 a.m.	4	100	0	0	3	1	Tornado	At Pulaski, several houses suffered roof and TV antenna damage. Leaving Pulaski, storm lifted for about 3 miles, descending again on Powell Chapel Community. Here wall ripped from 1 house and roof and porch from another. Barn and garage destroyed. Tornado moved northeastward.
ALABAMA Aliceville area, Pickens County	8	2:25 a.m.	8		0	5	5	1	Tornado	Tornado moved northeastward, demolished 15 houses and damaged several others. Storm path slightly northwest of Aliceville.
LOUISIANA New Orleans, Orleans Parish	8	2:30 a.m.					4	1	Wind	Storm moving eastward uprooted trees, severed powerlines, and smashed plate-glass windows.
MISSISSIPPI Meridian (15 miles west-northwest of), Newton County	8	2:30 a.m.					4	3	Wind	12 homes and 10 farm buildings damaged. Trees uprooted and powerlines downed. Storm moved northeastward.
ALABAMA Tuscaloosa County	8	Early a.m.			0	0	2	1	Tornado (suspected)	Power pole blown down between Buhl and Coker. No estimate of damage caused by power being off.
ALABAMA Franklin County	8	Early a.m.			0	0	2	1	Tornado (suspected)	5 power poles and 2 trees blown down.
ALABAMA Selma, Dallas County	8	4:22 a.m.	1-1/2	50-400	0	0	5	1	Tornado, wind, electrical, and funnel aloft	In northwest suburbs of Selma diagnosed as tornado, although damage was by winds blowing in same direction. Short path of fallen trees about 50 yards wide first made, followed by skip of about 1/2 mile. Second hit was about 200 yards wide and about 400 yards long. Short distance further to northeast it hit third time over path about 400 yards wide and about 500 yards long. Several hundred houses damaged, with only a few heavily damaged and none demolished. 1 automobile turned over on its side. Pressurejump occurred at Craig Field at 4 a.m., accompanied by drop of several degrees in temperature, and it is believed that tornado aloft managed to briefly penetrate unfavorable surface conditions to produce these surface gusts on right hand side of path. Funnel cloud seen in area at time of storm by weather forecast personnel of Craig AFB, presumably by light of lightning flashes. Storm moved northeastward.
ALABAMA Shelby County	8	4:30 a.m.	9	40	0	0	4	1	Tornado	Tornado moved northeastward from 2 miles northeast of Columbiana to 2 miles west of Wilsonville. Skipping path with width reported only along last 2-1/2 miles.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
GEORGIA Early and Calhoun Counties	8	9-10 a.m.	15		0	1	4	1	Tornado	Storm moved northeastward from south of Blakely, Early County, to near Leary, Calhoun County, causing property damage at 4 different places along path. About 7 small houses and several barns destroyed and 2 larger houses damaged. Many trees uprooted or twisted off and 2 automobiles damaged by falling trees. 1 person injured slightly.
NORTH CAROLINA Yadkin and Surry Counties	8	12:30-2 p.m.	20	300			4		Wind	School damaged, wall blown in. Roofs damaged, outbuildings destroyed. Some indication of tornado activity, but not conclusive. Storm moved northeastward.
ILLINOIS Central and northern portions	8	Afternoon							Wind	Rapidly intensifying LOW center moved from northern Illinois to Lake Superior. Westerly winds 30-45 m.p.h., caused scattered light damage, especially in Chicago area.
NORTH CAROLINA Catawba County	8	Afternoon			1				Wind	Man electrocuted by "live" wire blown down in windstorm.
WEST VIRGINIA Western and central counties	8	Afternoon				1		1	Wind	Scattered reports of trees blown down or large limbs broken off, roads temporarily blocked, windows blown in, roofs and other parts of buildings damaged, antennas blown over, power services disrupted. Storm moved northeastward.
WISCONSIN Northern and Central portions	8	Afternoon				2	4	1	Wind and snow	Storm moved eastward.
NORTH CAROLINA Wake County	8	4 p.m.				1	3		Wind and rain	Woman injured in automobile accident, due to blinding rain and wind. 2 houses partially unroofed in Raleigh suburb.
PENNSYLVANIA Statewide	8	Afternoon-evening				9	4	1	Wind	Strong, gusty winds which reached 70 m.p.h., caused most of damage in western part of State. Flying glass from broken plate-glass store windows responsible for all injuries. Several buildings unroofed. Property damage from uprooted trees and snapped utility lines widespread. Several large cinder-block walls under construction blown down and home near McKean blown off its foundation. Storm moved eastward.
NORTH CAROLINA Wilson, Edgecombe, and Bertie Counties	8	6:30-7 p.m.	40	1-200	0	5	5	4	Tornado	American Red Cross reports only 1 major injury. Following also reported by Red Cross: 10 homes, 23 farm buildings, 5 other buildings destroyed; major damage to 8 homes, 21 farm buildings, 6 others; minor damage to 20 buildings, 34 families affected. Greatest single item of damage was 1,250-pupil school destroyed in Wilson County. Tornado moved northeastward.
	8									Minor storms also reported at Canton and Waleska and near Dahlonega, Ga.; and at Golden Meadow, La.
MICHIGAN Upper and Lower all portions	8-9	Noon 8th-noon 9th					5	1	Wind, snow, and glaze	Light to moderate snow and some glaze. $50,000 damage to pier at Grand Haven, rest of damage to plate-glass windows, billboards, automobiles, minor structures, etc.
NEW YORK	8-9	Afternoon 8th				3			Wind, snow, and rain	Low pressure storm area moving through southern Canada north of New York State caused strong, damaging winds over many sections of State. Some rains also occurred and snow squalls developed as cold air followed storm. Innumerable power- and communications lines downed as well as trees, branches, etc. Wind gusts reached 72 to 80 m.p.h., in Niagara with gale winds or more in many sections of State. 2 school boys in Lackawanna hit by falling chimney and 73-year old man in Buffalo blown down and suffered broken wrist. Snow squalls in Lake Erie and to less extent in Lake Ontario snow belts caused usual traffic problems along with some fallen lines due to snow accumulation.
CONNECTICUT Southwestern portion	8-9	P.m. 8th-early a.m. 9th				2	5		Wind and rain	High winds of 30 to 40 m.p.h., general over State and gusts to 60 m.p.h. Concentrated damage in Fairfield County. Falling trees and limbs caused widespread power and telephone failures for several hours throughout County. 2 persons escaped injury from large tree blown over on front end of car. Car heavily damaged. DC-3 aircraft touching runway at Westchester, N.Y., airport blown aloft suddenly by wind gust and forced to land in residential street of Greenwich, Conn., a few miles away. Pilot and co-pilot slightly injured; no damage to residential property, but plane damaged in excess of $100,000. Small boats blown ashore in Westport harbor.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	8-9	Evening-night				4	4	1	Wind, rain, and electrical	Winds over entire section caused widespread minor damage from falling trees, limbs, and wires, most numerous instances in Massachusetts. Outdoor movie screen damaged at Chicopee, Mass. Many small boats and fish traps along Cape Cod damaged. Tree fell across road at Swansea, Mass., causing 4-car accident and 2 injuries. Tree smashed automobile at Springfield, Mass. 2 additional injuries in automobiles said to be due to storm. Lightning burned grist mill at Rockland, Mass. Tree fell on house in Laconia, N. H. Extensive power failure for short time at St. Johnsbury, Vt.
OHIO Scattered points, especially northern portion	8-9				2	Several	4	2	Wind	Storm moved southward. Injuries from flying debris and deaths caused by contact with fallen power wires. High winds covered all of Great Lakes and Ohio Valley. Speeds high, particularly following cold front which moved past Cleveland area shortly after noon. Winds of 80 m.p.h., measured along Lake Shore, and nearly as strong at some inland points. Damage widespread and significant, although in many places confined to roofing, windows, trees, signs, utility lines, etc. Most spectacular were Highway Patrol radio tower destroyed at Massillon, and Weather Bureau storm warning tower toppled at Conneaut.
	8-9									Minor storm also reported at South Bend, Ind.
OREGON Western portion	10	Afternoon-evening	250	*100			4	2	Wind and rains	High winds accompanied locally by heavy rain occurred nearly full length of Oregon coast and inland for 60 to 100 miles. Gusts recorded up to 48 m.p.h., at Portland, 46 m.p.h., at Medford, 44 m.p.h., at Salem. 1 home suffered heavy damage in Albany area, several roofs damaged in other scattered areas. Numerous power service interruptions for short periods. Practically all damage due to wind. Estimated not more than $2,000 due to rains. Storm moved eastward. Some traffic accidents in which injuries occurred, but no known injuries as direct result of storm elements.
CALIFORNIA Santa Barbara County	12					1	2		Wind	Strong, gusty winds broke branches from trees. Woman injured by falling branch. 2 boats dragged anchors in harbor, but no damage reported.
LOUISIANA Alexandria (20 miles southeast of), Rapides Parish	13	11:10 a.m.			0	0	3	1	Tornado (suspected)	2 homes destroyed, but no other information available.
LOUISIANA De Ridder, Beauregard Parish	13	1:20 p.m.							Wind	Only report was by radio station but no details available from any source; not included in Red Cross report.
LOUISIANA Burrwood (1 mile south of), Plaquemines Parish	13	1:25 p.m.		8	0	0	3	1	Tornado	Tornado moving northward damaged 1 house and 1 warehouse, broke some windows, and overturned rain gage.
MISSISSIPPI Meridian, Lauderdale County	13	10 p.m.					4	1	Wind	Buildings unroofed, trees uprooted plate-glass windows smashed, and powerlines downed.
MISSISSIPPI Stringer, Jasper County	13	10:30 p.m.				6	4	3	Wind	6 injured when automobile crashed into fallen tree during storm; some damage to homes.
LOUISIANA Ramsay St. Tammany Parish	13	11:25 p.m.	2	100	0	0	5	1	Tornado	Tornado moving northeastward caused heavy damage to church and dormitories of St. Joseph's Abbey and St. Gertrudes Convent, with trees uprooted or twisted off 6 to 12 feet above ground; downed trees indicated rotating winds.
NEVADA Washoe and Mineral Counties	13	Evening							Wind	In Reno-Sparks area, gusty winds up to 72 m.p.h., blew over 45-foot house trailer, toppled several trees, and caused damage to roofs, sign boards, and powerlines. Damage to dwelling roofs reported at Hawthorne.
	13									Minor storms also reported in Delta area, and at Mansford and Oakdale, La.; and at Vicksburg, Miss.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

NOVEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ALABAMA Russellville, Franklin County	13-14	Night							Wind	General high winds over State. Power disruption due to fallen trees in Russellville.
ALABAMA Mobile County	13-14	Night					4	1	Wind	General high winds over State. Tug boat at Mobile driven into L&N bridge by wind and current early on 14th. Trains halted at Mobile, Pensacola, and Flomaton. Tree fell across automobile at Citronelle.
FLORIDA Quincy area, Gadsden County	14	8:30 a.m.			0	0	3		Wind and tornado (suspected)	3 homes sustained major damage, several other buildings unroofed.
INDIANA	14	Midday				6	5	1	Wind	High winds from intense Low pressure center blew down television antennas, utility lines, and trees; broke windows, and damaged buildings. Peak gusts reached 69 m.p.h., at Indianapolis. Some of cities reporting damage were: Bedford, Muncie, Rushville, Anderson, Columbus, Whiteland, Greenwood, and Auburn.
	14									Minor storms also reported at Brunswick, Jonesboro, and Savannah, Ga.; in Erie area, Pa.; and at Crossville, Tenn.
MICHIGAN Lower Southern half	14-15	A.m.14th - a.m. 15th					4	1	Wind	
MISSISSIPPI Grenada, Grenada County	15	3:30 p.m.					4	1	Hail and wind	Some homes unroofed and windows broken.
	15									Minor storms also reported in Gregory and Lawrence Counties and in northern Black Hills, S. Dak.
TENNESSEE Knoxville and vicinity, Knox County	15-18							1	Rain	Heavy rains caused flooding of some streets, severe erosion and some rock slides onto streets; some families evacuated in Knoxville and about 10 in Fountain City.
LOUISIANA Ft. Jessup, Sabine Parish	16	5 a.m.	1	100	0	1	4	1	Tornado	Tornado moving northeastward demolished 3 homes and 1 automobile and damaged several homes.
TENNESSEE Chestua Community, Monroe County	16	A.m.						1	Electrical	Barn containing 1,200 bales of hay, 2 calves, and 6-acre tobacco crop struck by lightning and burned to ground.
ALABAMA Red Hill, Marshall County	16	Morning					4	1	Wind	3 barns unroofed.
	16									Minor storm also reported in Georgetown area, S.C.
MISSISSIPPI Macon (5 miles west of), Brooksville, to Deerbrook, Noxubee and Lowndes Counties	17	12:15-12:40 p.m.	15	70	2	2	5	3	Tornado	Developed 5 miles west of Macon, crossed highway just north of Brooksville and dissipated after passing Deerbrook; followed by State Police; 5 homes, 2 barns, and 4 other buildings destroyed; 5 homes and 7 barns damaged. Tornado moved north-northeastward, probably passed into Alabama.
ALABAMA Pine Springs, Lamar County	17	1:10 p.m.			0	0	3	1	Tornado	Near Sulligent. Brief dips in spots of tornado which hit near Gattman, Miss.
MISSISSIPPI Kilmichael to near Stewart, Montgomery County	17	1:30 p.m.	8	100	0	0	4	1	Tornado	2 homes and 1 other building destroyed and 8 buildings damaged. Tornado moved eastward.
ALABAMA Walker County	17	3:12 p.m.	5	15-400	4	15	4	1	Tornado and hail	Tornado moved northeastward from Cross Roads, 6 miles northwest of Jasper, to 1 mile north of Manchester. Hail occurred ahead of storm.
ALABAMA Cullman County	17	4:10 p.m.	8		0	3	5	4	Tornado	Tornado moved northeastward from Trimble to Crane Hill and Bethsaida. Became wide and dissipated over Cullman, where damage scattered. Crop damage mostly to unpicked cotton.
OKLAHOMA Idabel to Eagletown, McCurtain County	17	4:30 p.m.							Wind, hail, and rain	Strong winds caused general damage to utilities, roofs, windows, outbuildings, trees, etc., in Idabel area. Hail up to 1/2 inch in diameter fell at Idabel and up to size of golf balls at Eagletown. Storm moved northeastward into Arkansas.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TEXAS Fort Worth (5 miles west of), Tarrant County	17	4:35 p.m.		50-75	0	2	3		Tornado	Small tornado touched ground momentarily in southwestern part of White Settlement Township. Mainly roofs, glass windows, signs, and TV antennas damaged; 1 small outbuilding demolished; 2 house trailers moved, 1 blown over. Woman and child in trailer injured. Tornado moved northeastward.
ARKANSAS DeQueen and Smyrna areas, Sevier County	17	5:30-6:10 p.m.					4	3	Wind, hail, and rain	Hailstones as large as tennis balls reported in scattered localities; extensive damage to roofs, automobiles, and timber. Principal wind damage in Smyrna area. Storm moved southeastward.
ARKANSAS Mt. Ida (6 miles west of), Montgomery County	17	Early evening				1			Hail	Extremely heavy hail. 1 stone reported to have measured 11 inches by 9 inches in circumference and another 9-1/2 by 10 inches in circumference. 1 person reported injured by hailstones. Damage to roofs and automobiles. Pine trees stripped of needles and small branches.
MISSISSIPPI Ripley, Tippah County	17	8:30 p.m.			0	0			Funnel aloft	Cloud aloft, roar heard.
TENNESSEE Memphis (15 miles north of), Shelby County	17	9:15 p.m.			0	0			Funnel aloft	Pilot reported funnel cloud almost touching ground; no damage.
TENNESSEE Giles County	17	P.m.						1	Wind	Extensive roof damage to homes and barns, with resultant loss of stored crops, particularly tobacco. Elkton and vicinity hardest hit by wind; part of roof blown from home at Bryson.
TENNESSEE Athens, McMinn County	17							1	Rain	Several streets covered by water; 3 persons evacuated; heavy damage to cafe; some water in downtown basements.
	17									Minor storms also reported at Rosetta, Miss.; at Neosho and Springfield, Mo.; at Panama and Sallisaw, Okla.; at Ripley, Tenn.; and at Deport, Tex.
KANSAS North-central counties	17-18	Afternoon-night							Snow	Heavy snow totaling near 10 inches in area 50 miles wide from Lane and Ness Counties northeastward to Smith and Republic Counties resulted in some blocked roads and loss of unharvested grain sorghums. Greater losses avoided due to lack of strong winds and severe cold. Storm moved southeastward.
IOWA Northwestern two-thirds	17-18	7 p.m. 17th-5 p.m. 18th			4	18	5	1	Snow	Up to 18 inches snow covered band from southwest to northeast across central Iowa. Traffic stalled for 24 hours in some areas. Hundreds of traffic accidents during storm and on slippery highways in days following storm. 4 persons died from over-exertion, due to shoveling snow. Injuries resulted from traffic accidents. Storm moved northeastward.
MISSISSIPPI Holly Bluff (6 miles east of), to Yazoo City, Yazoo County	17-18	During night					3	4	Wind and rain	Squalls blew open cotton out and rains damaged it; trees uprooted, powerlines downed, some roof damage. Storm moved east-northeastward.
MISSISSIPPI Nitta Yuma and Rolling Fork areas, Sharkey County	17-18	During night					3	4	Wind and rain	Squalls blew cotton out on ground and rains ruined it.
NEBRASKA South-central and eastern portions	17-18	P.m.-a.m.					3	6	Snow	Much milo or grain sorghum broken off and dropped to ground, increasing difficulty of harvesting and causing much grain to be lost. Considerable damage to ornamental shrubs and trees. Snow depths up to 14 inches, many localities report heaviest November snow of record. Storm moved east-northeastward.
TENNESSEE Indian Mound Community, Stewart County	17-18							1	Rain	7 families evacuated; minor damage to 8 homes, 6 farm buildings, and 5 other buildings. 1 building destroyed.
	17-18									Minor storm also reported at Black Hawk, Miss.
ARKANSAS Blakely Mountain Dam (near), Garland County	18	3:30 a.m.				1	3	1	Wind	1 cabin destroyed and boat dock and trees damaged.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

NOVEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Needmore Community, Montgomery County	18	4 a.m.			0	0	3	1	Tornado	House wrecked and most of its furniture damaged; porch blown off second house; numerous trees and utility poles blown down or sheared off.
ARKANSAS West Memphis, Crittenden County	18	7 a.m.							Wind	Roofs damaged, utility poles broken, and power services disrupted.
MISSISSIPPI LeTourneau Community, Warren County	18	10:30 a.m.			0	0	3	1	Tornado	Struck in mostly wooded area; moved eastward.
MISSISSIPPI Warren, Hinds, and Rankin Counties	18	10:30 a.m. 12:30 p.m.	50	*1			5	3	Wind	Moved eastward from Vicksburg through Bolton, Clinton, and Jackson into Rankin County; Clinton and Bolton hardest hit; 1 home and 18 farm buildings destroyed; 16 homes and 32 barns damaged; 22 other buildings, including an oil derrick damaged or destroyed.
LOUISIANA Springville to Kentwood (5 miles southwest of), Livingston and St. Helena Parishes	18	11-11:45 a.m.	15	25	0	0	4	1	Tornado	Began as severe storm near Springville and moved over thinly settled area to near Kentwood; damage spotty with heaviest near Kentwood where 1 house and dairy barn destroyed and 2 homes damaged. Tornado moved north-northeastward.
KENTUCKY Pulaski County	18	A.m.			1				Electrical	Woman killed when struck by lightning while working in barn.
SOUTH CAROLINA Anderson County eastward to Fairfield County	18	Morning				1	4	1	Rain	4- to 5-inch rainfall occurred on early morning of 10th from about Anderson County through Fairfield County; caused considerable damage to county roads, etc.
MISSISSIPPI Meridian and Russell areas Lauderdale County	18	Noon					4	1	Wind	Widespread high winds destroyed 1 home, damaged 7 others and damaged numerous other buildings, uprooted trees, downed power- and communication lines. Storm moved eastward.
MISSISSIPPI Pontotoc County	18	Noon					4	1	Wind	1 home destroyed, 3 homes and 3 barns damaged; no other data available.
LOUISIANA Franklinton area, Washington Parish	18	12-12:30 p.m.	10	3000			4	3	Wind, electrical, and rain	Severe thunderstorms with high winds caused widespread mostly minor damage over western half of Parish, with greatest damage in Franklinton area where 5 homes and 5 farm buildings suffered major damage; trees uprooted and powerlines downed. Storm moved eastward.
MISSISSIPPI Cairo community to Holcut, Prentiss and Tishomingo Counties	18	12:10 p.m.	10	50	0	2	5	1	Tornado	Moved northeastward from Cairo community, 15 miles east of Booneville, into Tishomingo County, destroying 6 homes and 6 farm buildings and damaging 13 homes, 6 farm buildings, and 2 other buildings.
TENNESSEE Hohenwald, Lewis County	18	1 p.m.						1	Wind	Several trees uprooted and many homes damaged; side blown from garage.
ALABAMA Franklin County	18	1:30 p.m.	8		0	0	4	1	Tornado	Tornado moved northeastward, partially destroyed 1 house and moved another on foundation at Belgreen. Several downtown store roofs damaged in Russellville probably due to spread-out winds of dissipating tornado passing Belgreen.
MISSISSIPPI Sharon Community to Sandersville (near), Jones County	18	1:30 p.m.	5	50	0	2	4	1	Tornado	3 homes and 6 farm buildings destroyed, 13 homes and 6 other buildings including church damaged. Tornado moved northeastward.
MISSISSIPPI Hattiesburg (12 miles west of), Forrest County	18	1:30 p.m.					4	1	Wind	3 homes and 1 barn damaged.
TENNESSEE Maury County	18	1:30 p.m.				2	5	1	Wind	At Columbia, blew portion of roof off 1 school, allowing rain damage to interior and splintered door of another; moderate wind damage to 4 business establishments; numerous TV antennas damaged; many trees felled or damaged, some damaging phone lines; minor injuries to 2 persons, due to wind-blown objects; damage in County as a whole, about $250,000.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Columbia (5 miles southeast of), Maury County	18	1:30 p.m.						1	Wind and rain	Wind hit suddenly. Rain came down so hard could not see trees a few feet from house. 1 house considerably damaged and moved 8 feet off foundation, porch blown off another, and part of roof blown off third; 6 smaller farm buildings blown or knocked down; 15 trees snapped off, utility lines downed, and minor damage to several other barns and outbuildings.
TENNESSEE Mt. Pleasant, Maury County	18	1:30 p.m.						1	Wind	Building unroofed, allowing extensive rain damage; store door and window smashed.
TENNESSEE Nashville and vicinity, Davidson County	18	2 p.m.				1	4	1	Wind	Chimney, toppled by wind, punctured school roof causing serious injury to 1 child inside; display shed, containing 15 motor boats, blown over; 48 feet of new metal roofing ripped from State Capitol building and flagpole atop building bent; several trees and windows broken and numerous power- and phone lines downed.
ALABAMA Greene and Hale Counties	18	2:30 p.m.	28		0	5	5	1	Tornado	Tornado moved northeastward. From Forkland in Greene County it "plowed several miles" and lifted to strike again in Hale County, passing successively Sawyerville, near Akron, and Havana.
MISSISSIPPI Hale, DeSoto, and Linden, Clarke County	18	2:30 p.m.	10	75	0	0	4	1	Tornado and wind	5 homes, 5 barns, and 4 other buildings destroyed with 7 homes and 20 other buildings damaged; attendant squalls also caused minor damage over most of County. Storm moved east-northeastward.
ALABAMA Tuscaloosa (12 miles north of), Tuscaloosa County	18	2:45 p.m.	3	Narrow	0	1	4	1	Tornado	Storm moved northeastward.
ALABAMA Dallas County	18	2:45 p.m.	35	Narrow	0	0	4	1	Tornado and hail	Northeastward skipping path, with only brief dips to ground, from Safford to near Orrville, near Marion Junction, and on to Summerfield and Plantersville. At Plantersville, hail large as hens' eggs reported. Residents of Plantersville terrified by funnel dipping up and down.
MISSISSIPPI Bunker Hill to Bassfield, Walthall, Marion, and Jefferson Davis Counties	18	3-4 p.m.	25	75	0	2	5	1	Tornado and wind	Began in Walthall County where heaviest damage occurred, degenerating into area squalls as moved across Marion County into Jefferson Davis County; 4 homes and 13 farm buildings destroyed, while 10 homes and 16 barns suffered major damage with 38 homes and 31 other buildings damaged to some extent. Storm moved northeastward.
ALABAMA Jefferson County	18	3:30 p.m.	7	50-200	1	35	6	1	Tornado	Tornado moved northeastward from Ensley past north Birmingham to Tarrant City. Storm passed about 2 miles northwest of Birmingham Airport. Red Cross reported 121 houses damaged or destroyed and 395 homes with minor damage.
ALABAMA Hulaco, Morgan County	18	Afternoon	Short	Narrow	0	0	4	1	Tornado	Brief dips of tornado wrecked 1 home, took back porch off 1 home, blew washhouse away, and unroofed barn.
ALABAMA Entire State	18	Afternoon					4	1	Winds	Pressure gradient over State gave rather windy afternoon when gusts of 40 to 50 m.p.h., common. Local scattered damage occurred over Marion and Fayette Counties, including section of bleachers blown over at school stadium at Brilliant, Marion County, and many trees and TV antennas downed. In Selma, Dallas County, scattered trees and TV antennas blown down, windows broken, and signs overturned. Tree in Decatur blown across house; wet soil contributed to felling of tree.
ALABAMA DeKalb County	18	4:15 p.m.	Short	Narrow	0	0	4	1	Tornado	Dipped at Fairview Community, near Dawson. 2 homes, 2 broiler houses, and several other buildings wrecked.
KENTUCKY Danville area, Boyle County	18	4:25-4:30 p.m.			0	0	4	5	Tornado	Tornado hit outskirts of Danville. 1 warehouse, containing tobacco, destroyed and another warehouse damaged. Roofs on about 12 houses damaged. Plate-glass windows, signs, trees, and smaller buildings smashed.
TENNESSEE Shirley, Armathwaite, and Mt. Helen, Fentress County	18	4:30-4:35 p.m.	15	220	0	2	4	1	Tornado	At Shirley, barn demolished, house almost entirely unroofed, building blown 20 feet off its foundation, and several large trees blown down. Back glass in automobile almost pulverized and buckled from inside out suggesting reduction of pressure outside. At Armathwaite, barn destroyed and home partly blown away, the remainder catching fire and burning. Home and nearby car total losses. At Mt. Helen community, 2 broiler houses demolished; 1 contained 5,000 3-week old chickens, many of which were killed or died

See footnotes at end of table.

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks

TENNESSEE (Cont'd.)										of exposure. 2 men slightly injured; 1 from flying debris, the other from a fall. Roof blown off 1 house and another damaged. Tornado moved northeastward.
ALABAMA Alexander City, Tallapoosa County	18	4:35 p.m.	Short	Narrow	0	0	4	1	Tornado	In Spring Hill subdivision 2 houses and 1 trailer and other buildings damaged. Trees strewn "like match sticks".
ALABAMA Heflin (near), Clebourne County	18	5:15 p.m.			0	0	4	1	Tornado	In Macedonia area. A number of broiler houses destroyed, scattered roof damage, porches damaged, and trailer destroyed.
GEORGIA Gore, Chattooga County	18	5:45 p.m.	12	500	0	1	5	2	Tornado	3 houses destroyed or heavily damaged and several barns and chickenhouses demolished. Property damage included $3,500 losses in livestock. Man injured when his car was blown off road and overturned several times. Tornado moved northeastward.
ALABAMA Lawrence and Morgan Counties	18	Late afternoon			0	0	3	1	Tornado (suspected) funnel aloft	Witnesses saw funnel cloud form southwest of Decatur and pass over City. It may have caused damage reported in southeastern Lawrence County which was not heavy. Storm moved northeastward.
ALABAMA Blount and Marshall Counties	18	Late afternoon	30	100	3	12	5	3	Tornado	Northeastward from Rosa, near Oneonta, Blount County passed Snead, Horton, and finally just northwest of Albertville. Pilot reported path straight as an arrow and with only one lift which was Short Creek and Town Creek.
ALABAMA Ashland (near), Clay County	18	Late afternoon			0	0	4	1	Tornado	1 building unroofed, several houses' roofs damaged, 1 house moved off pillars, 3 other buildings badly damaged. Porches removed from several houses.
TENNESSEE Spring City Rhea County	18	6 p.m.					6	1	Rain and wind	Wall of water descended on Spring City as result of 3-day downpour west of city; several homes twisted from their foundations and moved 50 to 75 feet; downtown businesses wrecked; 8 homes destroyed, 92 buildings sustained major damage, and 150 buildings received minor damage. 247 families affected, about 75 of which were evacuated.
GEORGIA Atlanta (Westend and southwest sections) Fulton County	18	7:15 p.m.					5	1	Wind	At least 10 business buildings and many more residences suffered varying degrees of roof and structural damage. Some smaller buildings destroyed completely. 100 or more trees uprooted or broken off and extensive damage to utility lines.
GEORGIA Crandall, Murray County	18	Early evening			0	0	4	1	Tornado (suspected)	1 church and 3 houses severely damaged and chickenhouses and barns destroyed. Tornado moved northeastward.
TENNESSEE Tracy City, Grundy County	18	9 p.m.						1	Rain	New broiler house flooded, killing 1,500 baby chickens.
KENTUCKY Metcalfe County	18	P.m.			0	0	4	4	Wind and tornado (suspected)	Northern end of county buffeted by winds that leveled 3 tobacco barns containing tobacco, and severely damaged 3 houses. Several other homes received lesser damage.
TENNESSEE Rhea County	18	P.m.						1	Rain	23 homes flooded in Morgantown, south Dayton, and Frog Level areas, 2 of which damaged extensively; 10 farm buildings sustained minor damage and 2 other buildings major damage.
GEORGIA Northeast quarter	18	Night					4	1	Wind and electrical	In addition to the above localized storms, high winds caused widespread but mostly minor damage in several widely scattered areas. At Griffin, Spalding County, 3 houses damaged; in Troup County, roofs and utility lines heavily damaged; in Butts County 1 house destroyed and another damaged; at Adarisville, Bartow County, 1 house unroofed; at Bremen, Haralson County, several houses damaged; in Carroll County minor damage reported.
KENTUCKY Muhlenberg County	18				1				Electrical	Child killed when lightning leaped from electrical outlet into room where she was sleeping.
KENTUCKY Bourbon County	18						4	4	Electrical	Lightning destroyed barn, containing stripped tobacco, hay, straw, and farm machinery.
TENNESSEE Anderson County	18								Rain	15 to 20 families evacuated at Lake City; basements flooded at Norris; some homes surrounded by water at Clinton.

See footnotes at end of table.

					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Shelbyville and vicinity, Bedford County	18								Wind and rain	Duck River about 5.4 feet above flood level; about 12 families evacuated; several streets underwater; some water damage to residences and other buildings; heavy crop damages, especially to corn in fields. Station wagon and pickup truck heavily damaged by tree blown down by wind.
TENNESSEE Campbell County	18								Rain	Heavy rains washed out railroad tracks between Jellico and Caryville and between Caryville and Pioneer. At Newcomb, some streets inundated and water entered basements.
TENNESSEE Dyersburg, Dyer County	18							1	Rain	Heavy rains caused flooding of lowlands. 15 to 20 families evacuated, basements flooded, and some highways inundated.
TENNESSEE Buchanan (near), Henry County	18							1	Electrical	Lightning struck barn, containing 1,000 bales of hay, which burned to ground. Farm home also severely damaged by lightning.
TENNESSEE Hickman and Perry Counties	18								Wind and rain	Damage to TV antennas and farm outbuildings; rear of store near Linden damaged; corn in fields badly damaged by high winds and torrential rains.
TENNESSEE Memphis, Shelby County	18							1	Wind	Hay barn blown down, shingles blown off 7 or 8 houses, and trees and phone wires downed.
TENNESSEE Portland (near), Sumner County	18							1	Rain	Flash flood washed out railroad tracks at 2 points near Portland and inundated rails at third.
	18									Minor storms also reported at Arab, Ala.; near Clarendon, Ark.; at Lafayette, Ind.; at Kenner, La.; at Ripley, Miss.; and at Dunlap, Goodletsville, Hartsville, Henderson, Huntingdon, Martin, and McMinnville, Tenn.
MINNESOTA Southeastern half	18-19	A.m. 18th -a.m.19th			4	Many			Snow and wind	Snow began morning of 18th continued for 24 hours, with accumulation up to 16 inches in extreme southeast. Drifting snow halted traffic. Over 200 schools closed. 3 automobile deaths attributed to storm. 1 person died shoveling snow. Numerous injuries from falls on icy streets and walks. Loss of unharvested corn and soybeans expected to be heavy. At Twin Cities, 9.5 inches snowfall was third greatest 24-hour November snowfall of record; greatest was 16.2 inches on November 11-12, 1940.
ILLINOIS Entire state	19	Early morning							Wind	Southwest winds 30 to 40 m.p.h., behind deepening north-northeastward moving LOW center caused widely scattered light damage.
MICHIGAN Lower - All portions	19	Early a.m. - afternoon			1		4	1	Wind and snow	19 inches of snow in some areas in western Upper Michigan; fatality near Grand Rapids when tree fell on victim.
PENNSYLVANIA Palmyra area, Lebanon County	19	12:20 p.m.	2	14	0	0	4	1	Tornado	Tornado moving northeastward destroyed barn and garage, damaged automobile extensively, tore off porches and roofs from homes, ripped part of home in two, twisted off many TV antennas including one 60 feet high, and twisted off 11 utility poles.
PENNSYLVANIA Pottsville area, Schuylkill County	19	12:45 p.m.			0	0	5	1	Tornado and rain	Tornado moving northeastward smashed windows, leveled billboards, and ripped roof from drive-in theatre restaurant. Heavy rain accompanying storm did extensive damage to equipment inside restaurant. Factory roof also blown off, resulting in $5,000 damage.
PENNSYLVANIA Eastern half	19	Afternoon					4	1	Wind	Numerous utility lines and poles, trees and TV antennas downed by 40- to 70-m.p.h., winds. Many house roofs also suffered considerable damage. Storm moved eastward.
NEW JERSEY Washington, Warren County	19	3:03 p.m.	** 1300	150	0	0	5		Tornado	Small twister dipped through 2-block area in business district, moved aloft, and then struck 1-block area in housing development 1/2-mile away. Severe damage to framework of 1 store, roofs blown off, and many windows out, mainly in business area. Storm moved east-northeastward.
TENNESSEE Obion County	19								Rain	At Obion, water covered almost all southeast section of city adjoining Obion River; 64 families evacuated. At Union City, 21 families evacuated and some industrial buildings flooded. At Rives, several families evacuated. Considerable damage to crops still in fields.

See footnotes at end of table.

	19									Minor storm also reported at Rockwood, Tenn.
MAINE, MASSACHUSETTS, and NEW HAMPSHIRE	19-20	Afternoon -night			1	Some		1	Wind, rain, electrical	Damaging winds caused widespread, but minor damages in area. Falling limbs and trees broke powerlines in many towns. Lightning caused power failures by burning out power transformers in Springfield, Mass., where heavy rains also washed out a road. Rain blamed for 1 death in Springfield, Mass., when pedestrian struck by automobile. A number injured in automobile accidents attributed to storm.
MICHIGAN Detroit, Wayne County	20	5:50 p.m.	1-1/2	75-150	1	12	5	1	Tornado (suspected)	No funnel observed, but definite path and width of damage characteristic of tornado. Fatality and most of injuries caused by falling "chunks" of concrete in factory building. Tornado moved east-northeastward.
TENNESSEE Cumberland County	20								Rain	Several families evacuated at Crab Orchard; estimated 12 houses with 6 to 18 inches of water. considerable damage to county roads and at least 4 bridges washed out. Damage to some hay, grain, and corn in flooded barns.
TENNESSEE Fayetteville, Lincoln County	20								Rain	Several families evacuated; considerable crop damage in county.
INDIANA Hancock, Madison, and Marion Counties	21					1	3	1	Wind	Side of a house and many roofs, awnings, windows, television antennas, and lines damaged.
TENNESSEE Henderson County	21								Rain	Severe damage to corn in fields; some roads impassable.
TEXAS Northwestern portion	21				1	3			Snow	First snow of consequence in Texas this season varied from 4 to 8 inches. Near-blizzard conditions caused closing of schools in at least 7 South Plains towns. Visibility in some places not over 100 yards. Many accidents occurred, 1 death in collision blamed on storm.
	21									Minor storms also reported at Flagstaff and near Prescott, Ariz.
CALIFORNIA Southern mountains and coastal plains from Oxnard to San Diego	21-22					19	6		Wind, sand, and fire	Santa Ana winds blowing from Mojave Desert through mountain passes of south, with gusts reported reaching 90 m.p.h., caused widespread damage to trees, buildings, utility lines, signs, aircraft, and automobiles. 28,000-acre brush fire along 40-mile front west of Crystal Lake in San Gabriel Mountains started by warming fire in oil drum, used by road crew, overturned by wind. Blowing dust and sand reduced visibility to near zero in many areas, and along with other storm debris, presented major clean-up operation. In some urban areas, pedestrians ordered from streets because of danger from flying glass and other debris. Twelve of 33 passengers aboard Western Airlines plane flying over Ontario at 10,000 feet injured (four of them seriously) when plane severely jolted by downdraft in severe turbulence. Damage by communities follows: La Habra: Several small trees downed; powerline broken. Riverside: Tree-top fire destroyed 80 palm trees. El Monte: Minor wind damage from fallen trees and wires. San Juan Capistrano: Flower nursery damaged. Banning: Roof ripped from church; plate-glass window broken in automobile show room. Idyllwild: Falling trees damaged 7 automobiles, and more than a dozen cabins. Hemet: 4 persons injured when pickup truck overturned by wind; 2 persons injured in cars struck by falling trees; church roof damaged; 1 residence partially destroyed; 6 plate-glass windows broken. Altadena: Giant eucalyptus limbs broken; full-grown pine trees snapped like matches; several roofs partially or completely destroyed. San Jacinto: Huge tree uprooted, severely damaging home; many narrow escapes from flying debris. Sunland-Tujunga: 2 persons injured when tree fell on house trailer; 1 home ripped apart by wind; hundreds of trees uprooted, 1 tree 15 inches in diameter snapped in half; many plate-glass windows smashed; all homes unroofed in 2-block area in Sunland; warehouse blown over in Shadow Hills area. Glendora: 1 person injured by falling limb; 6 homes and 5 automobiles damaged by falling trees; many signs and billboards blown down; several buildings

CALIFORNIA (Cont'd.)										unroofed. **Oxnard:** Heavy damage to young citrus groves; utility lines, television antennas, and window glass suffered most damage. **Camarillo:** dozens of TV antennas downed; trees and flagpoles snapped off; several signs demolished. **Fontana:** Over 60 trees downed; 2 house trailers and 2 furniture vans overturned by wind on expressway; heavy damage to utility wires and poles; 4 cars stalled in sandstorm had paint completely stripped off on windward side; heavy plate-glass window smashed in automobile show room. **Santa Ana:** Radio station off air when transmitter damaged by wind. **Pomona:** Hundreds of trees toppled; large limbs, cartons, and other debris littered streets; 2 homes, garage, and 1 parked automobile damaged by falling trees; 1 window broken. **Colton:** Many trees and utility lines downed; 2 automobiles damaged by falling trees. **Ontario-Upland:** Thousands of limbs torn from trees; several large trees uprooted or snapped by wind; 2 aircraft overturned by wind at Ontario International Airport; several automobiles damaged by falling limbs; many signs blown over, houses unroofed, and utility lines damaged. **Huntington Beach:** 7 steel oil derricks blown down across Coast Highway. **San Pedro:** Several boats damaged, and 4 boats blown ashore on Cabrillo Beach; 48-foot skin diving boat blown ashore on Catalina Island and destroyed by surf. **Whittier:** Many tree branches broken and powerlines downed, but only 1 small tree uprooted. **San Fernando:** Partially built apartment house suffered severe structural damage; roof of new house blown away; several tied-down planes at San Fernando Airport damaged; wing of 1 plane sliced off by hangar door which was torn loose by wind; many plate-glass windows shattered. **Los Angeles:** About 350 trees downed in city, mostly in northern and western areas; 2 homes slightly damaged by falling trees. **San Diego County:** Trees blown down in El Cajon, Pacific Beach, and San Diego; shingles blown from roofs in Ramona and Lakeside; powerlines downed in many places over County.
	22									Minor storms reported in Lawrence County and northern Black Hills, S. Dak.
MONTANA Conrad, Pondera County	22-23						3	1	Wind	Damage to roofs, TV antennas, storm doors, etc. Some soil blowing. Estimated peak wind speed 70 to 80 m.p.h.
NEW YORK Lake Erie area	22-23								Snow and wind	Snow squalls caused by advance of cold air across warm waters of Lake Erie brought up to 3 feet of snow in some areas to lee of Lake. 200 plows necessary to clear snow, and traffic severely tied up. Some damage to power- and communications lines. No damage estimates available, but costs mostly in wages for clearance of snow and restoration of downed lines. Injuries not important. Some squall activity also to lee of Lake Ontario, but to much less extent.
WASHINGTON Northwestern portion	25	Afternoon					4	1	Wind	High wind blew down trees in several localities in northern half of western Washington, damaging property and causing large number of power outages.
FLORIDA Alligator Reef, Monroe County	25	5 p.m.			0	0			Waterspouts and funnels aloft	4 waterspouts and 6 funnel clouds sighted off Alligator Reef.
IDAHO Kootenai and Shoshone Counties	25	Evening							Wind	Wind gusts estimated up to 50 m.p.h., at Kellogg, 40 m.p.h., at Coeur d'Alene. Utility poles toppled and trees blown across lines with disruption of power and telephone services. Some damage to roofs and windows, 1 automobile accident caused by tree blown across highway.
CALIFORNIA San Fernando Valley and San Bernardino and Los Angeles County	25						3		Wind and dust	Santa Ana winds breaking through mountain passes raised huge billows of dust, reducing visibility to zero at Ontario and causing 500 employees at aircraft overhaul and repair base to be sent home. 2 trees blown down at Chino, tree blown down at Sunland, and some powerlines whipped down in San Fernando Valley.
	25									Minor storm also reported at Whitefield, N. H.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

NOVEMBER 1957

					Killed	Injured	Property (exclusive of crops)	Crops		
IDAHO Northern counties	27-28	Night							Snow and wind	Heavy snow which began evening of 27th caused much trouble on power- and telephone lines in Coeur d'Alene belt and Newport and Bonners Ferry's sectors. Crews worked 16 hours restoring service. At Lewiston WBAS, winds reached 57 m.p.h., at 4:50 a.m., of 28th.
TEXAS Kress, Swisher County	27-29							5	Wind	Damage heavy to maize crop.
KANSAS Cherokee County	29	8:45 a.m. - 4 p.m.							Wind, glaze, and snow	High winds estimated at 50 m.p.h., accompanied by some glaze and later by heavy snow caused damage to electric and telephone lines over county. Storm moved south-southeastward.
NEBRASKA Eastern portion	29	All day					2	6	Wind	Much additional milo or grain sorghum blown down, causing considerable grain to be lost. Many ears of corn also blown from stalks. Storm moved northeastward. If previous autumn weather had been normally dry, these crops would have been harvested, and damage from these storms minor.
OKLAHOMA Most of State	29	During day						3	Wind	Winds of up to 60 m.p.h., blew behind cold front across State. Widespread minor damage resulted to Christmas decorations, TV antennas, utilities, and unharvested sorghum crops. Several boat stalls damaged at Lake Tenkiller, Sequoyah County. Storm moved south-southeastward.
GEORGIA Alma (8 miles southeast of), Bacon County	29	2:45 p.m.	1	300	0	6	4	4	Tornado	1 house in which 12 persons were awaiting funeral was completely demolished. 2 persons hospitalized, others treated for minor injuries and released. Another house destroyed and 1 damaged. 3 cars wrecked after being carried several hundred yards. Losses include several head of livestock and chickens. Timber also destroyed. Tornado moved northeastward.
CALIFORNIA Berkeley and Oakland, Alameda County	29						3		Wind	Northerly gales aloft brushed surface in narrow band along Berkeley Hills, lasting for about 1-1/2 hours. 3 large plate-glass windows in furniture store shattered and window broken in printing shop. Branches blown from trees on University of California campus, and 2 large trees uprooted elsewhere in Berkeley.
CALIFORNIA San Gabriel Mountains, San Bernardino, Los Angeles, and Orange Counties	29-30					1	4		Wind	Santa Ana winds breaking through mountain passes caused new flare-up of the 28,000-acre brush fire in San Gabriel Mountains. Winds reaching reported peak of 80 m.p.h., at Fontana blew down trees and powerlines, and in Buena Park man injured when 60-foot eucalyptus tree fell across pickup truck. House trailer upset and demolished by wind while being towed on Devils Canyon road north of San Bernardino.
LOUISIANA New Orleans, Orleans Parish	30	4:30 a.m.					4	1	Wind	Squalls attending cold front uprooted trees, caused power failure and broke plate-glass windows, waves on Lake washed over seawall and damaged a few lakeside camps. Storm moved southeastward.

* Miles instead of yards.
** Yards instead of miles.
° Includes crop damage.
C Crop damage.
† Storm damages are placed in categories varying from 1 to 9 as follows:

1	Less than $50
2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

NOVEMBER 1957

Damaging floods occurred during the month in the Ohio Basin and in the East Gulf of Mexico Drainage. The flooding along the main stem of the Tennessee, though relatively minor under normal conditions, resulted in major agricultural losses to the unharvested corn and cotton crops in the western portion of the basin. A near record flood with heavy crop losses occurred on the Elk River in Tennessee. Severe flash floods were reported on the Piney River and Richland Creek in Tennessee. Severe flooding and heavy damage was reported on the Green and Barren Rivers in Kentucky and on the Upper Tombigbee in Mississippi.

ATLANTIC SLOPE DRAINAGE

Almost daily precipitation over eastern North Carolina and southern Virginia during the last half of November caused light to moderate flooding on the Dan, Neuse, and Cape Fear Rivers during the latter part of the month. A flash flood occurred on the Rocky River at Norwood, N. C., from about 2 inches of rain on the 23d. The crest stage of 22.4 feet was 6.4 feet above flood stage. Another heavy rain on the 25th caused another rise on the Rocky River to a stage of 22.55 feet. These were the highest crests on the Rocky River at Norwood since records were started in June 1956. Flooding along the Lumber River at Lumberton, N. C., from the 24th to about December 7 forced evacuation of about 150 people from 30 homes located in a low area called Moccasin Bottoms. These people were prevented from returning to their homes for about 2 weeks. The town of Lumberton was not affected by the high water. This flood was probably 4 to 5 feet less than previous big floods. The high water interfered with logging operations along the Roanoke River and shipping on the Cape Fear. Some fields of grain were covered with water along the Rocky River.

The heavy frequent rainfall during the latter half of the month caused the Pee Dee River at Cheraw, S. C., to rise above flood stage on the 24th and remain above flood stage for 5 days. Further downstream at Peedee, S. C., the stream continued in flood into December.

River levels on the Pee Dee, Broad, and Congaree crested at the highest stages since January 1954. Damage from the overflows was relatively insignificant.

There was a series of minor rises in the Savannah, Ogeechee, and Ocmulgee Drainage basins in Georgia during November and early December. Overflows were limited to lowland areas and were due to frequent heavy rains. No damages were reported.

EAST GULF OF MEXICO DRAINAGE

The flooding in the Apalachicola River at Blountstown, Fla., from the 22d to the 30th was due to heavy rains (2.5 to 5 inches) during the period from the 14th through the 18th. Additional heavy rains (1.5 inches) occurred during the 3-day period from the 22d to the 24th.

Heavy rainfall caused minor floods in the upper Oostanaula at Resaca, Ga., and in the upper Coosa at Gadsden, Ala., from the 20th to the 22d. Flood damages were confined to rural areas and included damages to agriculture and public transportation systems.

Heavy rain (2.5 to 3 inches) on the 14th followed by occasional showers during the rest of the month caused flooding on the Black Warrior and Tombigbee Rivers in Alabama and Mississippi, respectively. The heaviest flooding and damage occurred on the upper Tombigbee in the areas around Amory, Aberdeen, and Columbus, Miss. Approximately 45,000 acres of land and 150 homes were reported under water. At Columbus, Miss., approximately 200 families were evacuated from their homes. From reports received, total damage exceeded a million dollars. Stages on the Warrior were not unusually high but came at an unfortunate time when construction of a new Lock and Dam near Eutaw, Ala., was at a critical stage. A large Coffer dam had to be flooded to prevent complete destruction.

The heavy rain from the 12th to the 18th caused general flooding on the Pearl River at and below Jackson, Miss., beginning on the 14th at Jackson, Miss. Rainfall during the period ranged from 4 to 6 inches over the upper Pearl and from 6 to 8 inches over the middle and lower Pearl. Some of the rainfall was intense for short periods, producing more intensive tributary flooding for brief periods than was reflected at the gaging stations. Rapid rises resulted in the Pearl River from the mouth of the Yockanookany River to the Gulf Coast and on the Bogue Chitto below Franklinton, La., to the junction with the Pearl River. Lesser rises to below flood stage was measured on the Leaf, Chickasawhay, and Pascagoula Rivers. Damages are estimated to have exceeded 1/4 million dollars and was confined mostly to agriculture.

MISSISSIPPI SYSTEM

Ohio Basin.--Minor flooding occurred along the Salt River in Kentucky between the 18th and 22d from the heavy rain (3 to 4 inches) on the 18th and 19th. No damage resulted due to previous harvest of all crops on lowlands and operation of flood protection facilities at Taylorsville, Ky.

This same storm caused rapid rises on the Barren, Rough, and Green Rivers in Kentucky to above flood stage. The rainfall during this period averaged between 4.5 and 5 inches and was particularly heavy over parts of the Green River Basin, especially in the area from near Hopkinsville east and northeast to the vicinity of Munfordville, Ky. The heaviest rainfall in this general area was at Brownsville, Ky., with 8.42 inches reported in a 48-hour period. Preliminary estimates of the total acreage flooded is around 150,000 acres, and losses to grains in the field is estimated between 2-1/2 and 3 million dollars.

The only flooding along the White River occurred at Edwardsport, Ind., between the 16th and 22d. This rise resulted from a concentration of rainfall over the lower White on the 13th-15th and 17th-19th which averaged over 2 inches during each rise. The overflow at Edwardsport, Ind., was slight as the area is protected by levees.

Heavy rain in the Cumberland Basin from the 15th to the 19th caused flooding in the headwaters at Williamsburg, Ky., from the 18th to the 21st and in the lower reach of the main stem at, and below, Clarksville, Tenn., between the 19th and 24th. The rainfall averaged 4.5 inches above Wolf Creek Dam and 4.6 inches below. There was some inconvenience due to flooding of country roads, otherwise damage was minor as most crops in the lowland areas had been gathered.

The flooding which resulted in heavy agricultural losses in the Tennessee River Basin was due to moderate to heavy rainfall over the central and western portions of the Tennessee Valley. Total accumulation over the area below Chattanooga, Tenn., averaged 7.8 inches during the 6 days. In the area above Chattanooga, the cumulative total averaged 4.8 inches. Runoff was high, as the month preceding the storm was one of the wettest on record. High discharges had to be maintained at all of the main river dams from Chickamauga through Kentucky Dam. Lowlands below each dam were flooded to depths of 5 to 8 feet. Under normal conditions such flooding results in very little damage; however, due to the long period of rainy weather preceding this storm, harvesting of corn and cotton on the western portion of the watershed had been retarded and these crops were lost. As a result major agricultural losses resulted from this minor flood. The flood on the Duck River at Shelbyville, Tenn., was 0.4 foot higher than the flood of February 1957 and among the highest of record for so early in the season. The flood on the Elk River was slightly below the flood of February 2, 1957, and only 2.2 feet below the record flood of January 5, 1949. Moderate to heavy crop damages occurred in this area. The flood on First Creek at Knoxville, Tenn., has been equaled or exceeded five times in the last 10 years. At Mineral Springs, the crest was the second highest of record, 8.9 feet (record 10.0 feet, September 1944). The area in the vicinity is largely undeveloped and not subject to much damage. Torrential rains of about 2-hours duration over the Piney River watershed during the afternoon and evening of the 18th caused a record flash flood with major damage at Spring City, Tenn. Rainfall during the 2-hour period ranged from 3 to 8 inches. This heavy rain produced record high stages in Spring City, with the water striking as a wall with savage force. There were no casualties, but property damage was very heavy. This same storm caused a severe flash-flood on the Richland Creek at Dayton, Tenn., where about 40 homes and one business were flooded up to 3 feet of water.

Flooding along the main stem of the Ohio was confined to the reach below the Cumberland and Tennessee Rivers. The flooding was minor as to the amount of land covered by overflow, but the crop losses were heavy due to unharvested crops, mainly soybeans and corn.

White and Arkansas Basins.--Heavy rains on the 12th and 13th caused flooding on the Black River at Black Rock, Ark., and the Little Red River at Heber Springs and Judsonia, Ark. Additional heavy rain on the 17th and 18th caused flooding on the Black River at Pocahontas, Ark., a second flood on the Little Red River and flooding on the White River at Augusta, Ark., and below.

This same storm caused light flooding in the Arkansas Basin on the Poteau River at Poteau, Okla., on the 18th and on the Petit Jean at Danville, Ark., on the 19th.

Red Basin.--The flooding on the Saline and Ouachita Rivers was due to heavy rain (4 to 6 inches) on the 12th and 13th. The greatest storm total reported was 7.6 inches at Arkadelphia, Ark.

A record stage of 45.6 feet was observed on the Sulphur River at Hagansport, Tex., on the 9th. This was 0.3 foot higher than the previous record stage of 45.3 feet in November 1946. The crest downstream at Naples, Tex., was considerably less than the record crest of 37.7 feet in 1945. Flooding along the Cypress River was light to moderate. Flood damage in the Sulphur and Cypress Rivers will be small, since most of the land is devoted to grazing land.

Lower Mississippi Basin.--A series of heavy rains between the 8th and 19th caused flooding in tributary streams of the lower Mississippi in Missouri, Tennessee, Arkansas, and Mississippi between the 14th and the end of the month.

In the St. Francis Basin, the reservoir above Wappapello Dam rose to a crest of about 16.3 feet on the 20th, and the resulting discharge caused a crest at Fisk, Mo., of 23.5 feet on the 21st-22d. It was above flood stage at Fisk for about 9 days, and the crest was 0.8 foot below the April 1957 crest. Very little damage occurred in this area, as levees protected lowlands. Further downstream at St. Francis, Ark., there were three crests. The crest at Parkin, Ark., of 31.2 feet from November 29 to December 1 was the second highest since 1937 when it reached a stage of 34.2 feet. Severe flooding occurred on some of the tributary streams of the Mississippi in central and northern portions of west Tennessee after the heavy rains from the 17th to the 19th. The heaviest flooding occurred on the Obion, Forked Deer, and Hatchie Rivers and minor flooding on the Loosahatchie and Wolf Rivers. The flood delayed planting of low areas. The high water ruined almost all unharvested crops and winter pastures in lowland areas.

WEST GULF OF MEXICO DRAINAGE

The month began with all streams about normal but falling slowly. The rainfall for November was well above normal with heavy rain falling frequently throughout the month. Heavy rains at the end of the first week caused 2- to 5-foot rises on most of the streams. The flooding on the Nezpique Bayou and Calcasieu River in Louisiana was light and on the Sabine light to moderate.

Flooding began on the Trinity River at Rosser, Tex., on the 6th. Flooding advanced downstream to Liberty, Tex., on the 14th and was still in progress at this point when the month ended. This flooding was due to heavy rain from the 3d to the 8th, with the greatest fall occurring on the 4th and 5th. Rainfall ranged from 3 to 6 inches during this period, with several stations reporting a total of 8 to 10 inches during the month. No appreciable damage was reported.

Flooding on the Navidad, Lavaca, and Guadalupe Rivers in Texas was due to heavy rains on the 21st and 22d. Runoff was heavy due to previous heavy rains from the 10th to the 12th. Damage from this flood was minor.

GULF OF CALIFORNIA DRAINAGE

Colorado Basin.--Heavy rains and snows from the 2d to the 6th caused flooding on the Freemont and Muddy Rivers and other smaller streams in east-central Utah. There was considerable damage by covered and washed out roads and bridges. The ferry on the Colorado River at Hita, Utah, was also washed away.

PACIFIC SLOPE DRAINAGE

The flooding on the Sacramento River at Tisdale Weir, Calif., on the 15th and 16th was due to heavy rains which lasted from 12 to 18 hours. Overflow depth was less than 1 foot and only the barrow pits and lowest portions of the bypass were filled.

Heavy rain on the 12th and 13th caused sharp rises in coastal streams of northern California. Only minor flooding was reported at the mouth of the Eel River during high tide. At Fernbridge, Calif., a stage of 15.9 feet was reported on the 14th. This was 1.6 feet below flood stage.

15						

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

RAWINSONDE DATA

Average monthly values

NOVEMBER 1957

60-----	29	19,252	-58.9		299	23.5
50-----	27	20,395	-58.9		294	16.7
40-----	26	21,797	-59.7		296	15.2
30-----	22	23,609	-59.1		298	18.5
25-----	18	24,758	[illegible]		293	18.3
20-----	10	26,152	-58.9			
15-----						

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 13 obs , 30,514 m., -57.2 C.

20	6	26,409	-50.6			

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

---

[1] 10 mb., 12 obs., 30,661 m., -56.0°C., 297 dir., 58.9 speed

25	13	24,742	-59.0			
20	7	26,212	-57 0			

These average values for standard pressure surfaces were obtained by rawinsondes, dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 6 obs., 30,750 m., -50.6°C.

2/ 10 mb., 17 obs., 30,656 m., -51.2°C.

15						

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

1/ 10 mb., 10 obs., 30,890 m., -51.7°C.
2/ 10 mb., 13 obs., 30,896 m., -48.2°C.
3/ 10 mb., 14 obs., 31,139 m., -40.1°C.
4/ 10 mb., 9 obs., 30,880 m., -46.2°C.

1/ 10 mb., 6 obs., 30,639 m., -58.1°C.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

SOLAR RADIATION DATA

NOVEMBER 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg
Date-----------	5	6	7	8	9	10	11		12	13	14	15	16	17	18		19	20	21	22	23	24	25

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

** Radiometer inoperative.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys.

DESCRIPTION of CHARTS

CHART I. A. AVERAGE TEMPERATURE (°F.) AT SURFACE. B. DEPARTURE OF AVERAGE TEMPERATURE FROM NORMAL.-The average monthly temperature presented in Chart I-A is computed from the average daily maximum and the average daily minimum which in turn are computed from the daily maximum and minimum temperatures reported by some 225 first-order Weather Bureau stations and 700 cooperative stations. The departures from normal are presented in Chart I-B. They are based on the 30-year normals (1921-50) for the first-order Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for the cooperative stations.

CHART II. TOTAL PRECIPITATION.-

CHART III. A. DEPARTURE OF PRECIPITATION FROM NORMAL (INCHES). B. PERCENTAGE OF NORMAL PRECIPITATION.-Chart II is based on daily precipitation records at about 800 Weather Bureau and cooperative stations. In Chart III the anomaly in the month's precipitation is shown as a departure from the normal total and as a percentage of the normal total. These anomalies show the deviations from the 30-year normals (1921-50) for about 225 first-order Weather Bureau stations in Charts III A and B, supplemented in Chart III-A by the deviation from means of 25 years or more (mostly 1931-55) for about 700 cooperative stations.

CHART IV. TOTAL SNOWFALL.-

CHART V. A. PERCENTAGE OF NORMAL SNOWFALL. B. DEPTH OF SNOW ON GROUND.-Chart IV gives the total depth in inches of unmelted snowfall as reported during the month by Weather Bureau and cooperative stations. This is converted in Chart V-A into a percentage of the normal total amount computed for each Weather Bureau station having at least 10 years of record. The depth of snow on ground is that reported by both Weather Bureau and cooperative stations as of 7:00a.m. Eastern Standard Time on the last Monday of the month. This is reported only for the months December through April. The snowfall charts are presented each month November through April.

CHART VI. A. PERCENTAGE OF SKY COVER BETWEEN SUNRISE AND SUNSET. B. PERCENTAGE OF NORMAL SKY COVER BETWEEN SUNRISE AND SUNSET.-These charts are based on visual observations made hourly at Weather Bureau stations and averaged for the month. Sky cover includes, in addition to cloudiness, obscuration of the sky by fog, smoke, etc. Normal amount of sky cover is computed for stations having at least 10 years of record.

CHART VII. A. PERCENTAGE OF POSSIBLE SUNSHINE. B. PERCENTAGE OF NORMAL SUNSHINE.-Chart VII-A shows the amount of sunshine received in terms of percentage of the total hours of sunshine possible during the month. In Chart VII-B this is shown as a percentage of the normal number of hours of sunshine received. Normals are computed for Weather Bureau stations having at least 10 years of record.

CHART VIII. AVERAGE DAILY VALUES OF SOLAR RADIATION, DIRECT AND DIFFUSE.-Plotted on the chart are the monthly means of daily total solar radiation, both direct and diffuse, in langleys (gm. cal. cm.$^{-2}$) for all Weather Bureau stations which record this element. Supplementary data for which limits of accuracy are wider than for those data shown are drawn upon in making the analysis. The inset shows the percentages of the mean based on the period 1951-55.

CHART IX.-TRACKS OF CENTERS OF ANTICYCLONES AT SEA LEVEL.-

CHART X. TRACKS OF CENTERS OF CYCLONES AT SEA LEVEL.-Centers which can be identified for 24 hours or more are tracked in these charts. Semi-permanent features such as the Great Basin and Pacific Highs and Colorado and Mexico Lows are not shown. The 7:00 a.m. EST positions are shown by open circles, with the intermediate positions at 6-hour intervals shown by solid dots. The date is given above the circle and the central pressure to whole millibars below. A dashed track indicates a regeneration rather than actual movement to the next position. Solid squares indicate position of stationary center for period shown beside it.

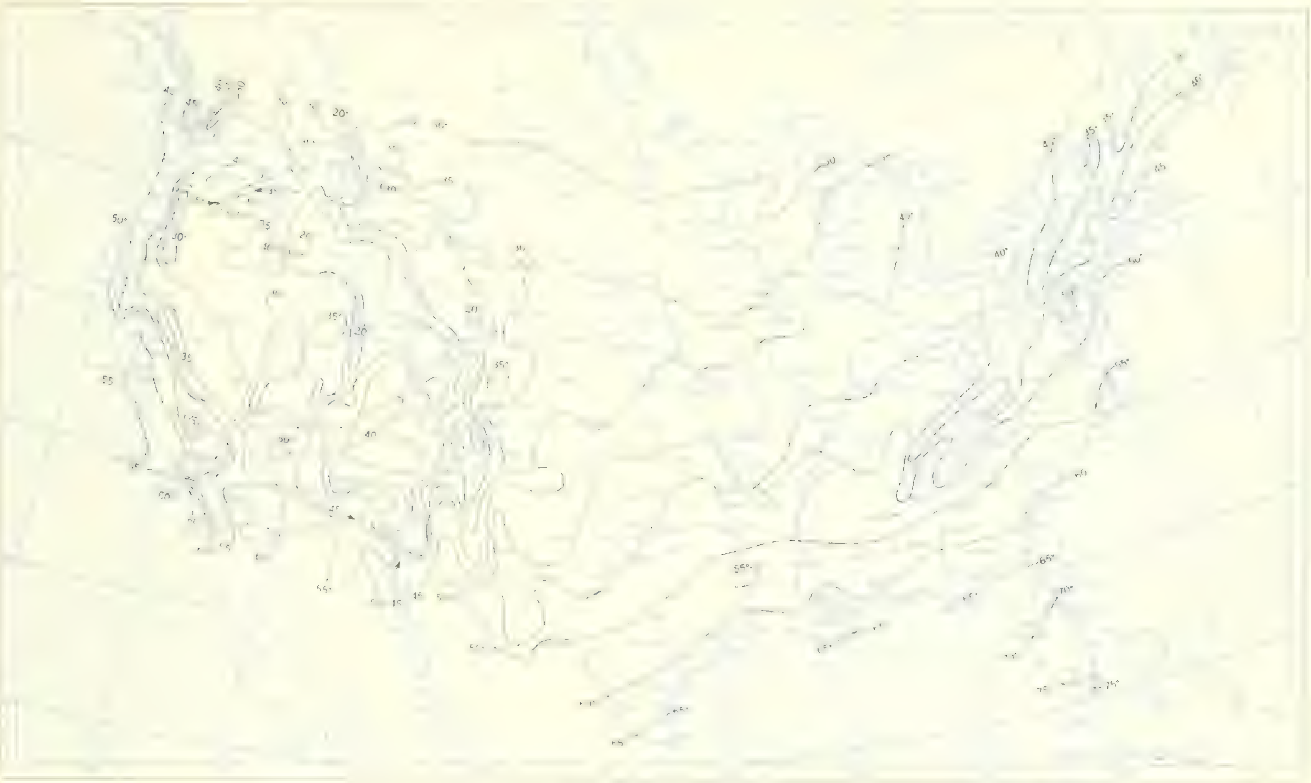
CHART XI. AVERAGE SEA LEVEL PRESSURE (mb.) AND SURFACE WINDROSES.-The average monthly sea level pressure is obtained from the averages of the 7:00 a.m. and 7:00 p.m. EST pressures reported at Weather Bureau stations. Windroses are based on the hourly wind directions (to 16 points of the compass) reported by Weather Bureau stations, each circle or arc indicating 5 percent of the time. The inset shows the departure of the average pressure from the normal average computed for each station having at least 10 years of record and for each 10° intersection in a diamond grid over the oceans from interpolated values read from the Historical Weather Maps for the 20 years of best coverage prior to 1940.

CHARTS XII-XVII. AVERAGE HEIGHT, TEMPERATURE, AND RESULTANT WINDS, 850, 700, 500, 300, 200, and 100 mb.-Height is given in geopotential meters and temperature in degrees Celsius. These are the averages of the 1200 GMT radiosonde reports. Wind speeds are given in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Directions are shown to 360° of the compass. Winds are based on rawins at the indicated pressure surface and at 1200 GMT.

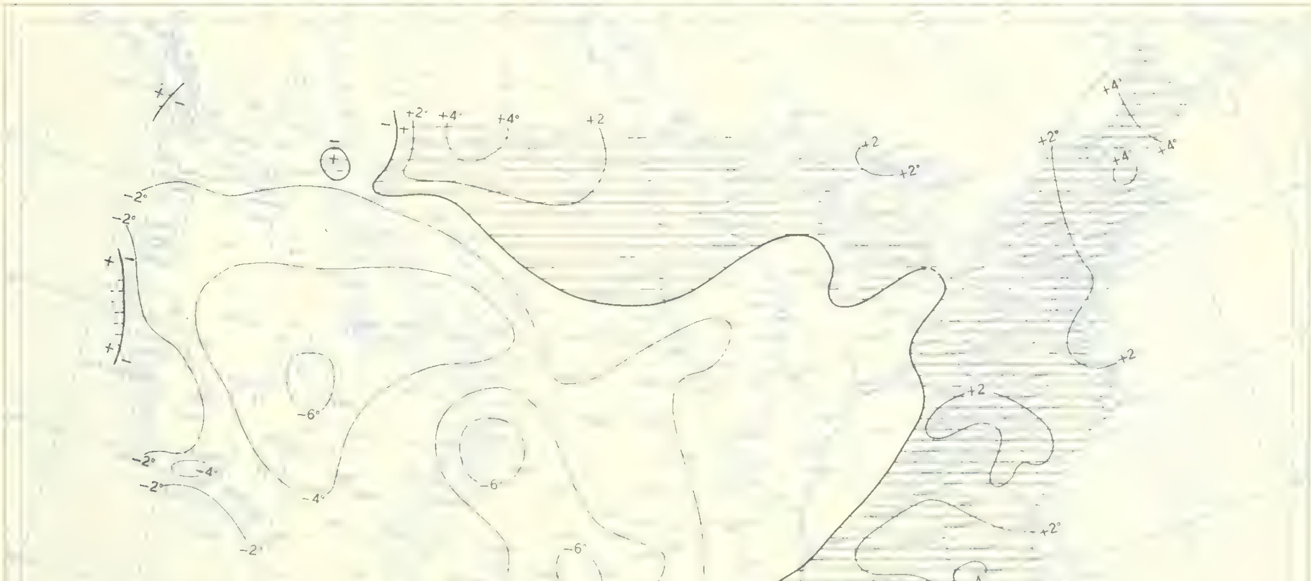
Tabulations of exact values of most of these charted elements for Weather Bureau stations are printed each month in tabular form in CLIMATOLOGICAL DATA, NATIONAL SUMMARY, and annual averages are presented in the CDNS Annual Issue each year.

USCOMM-WB-Asheville - 2/10/58 - 1850

Chart I. A. Average Temperature (°F.) at Surface, November 1957.



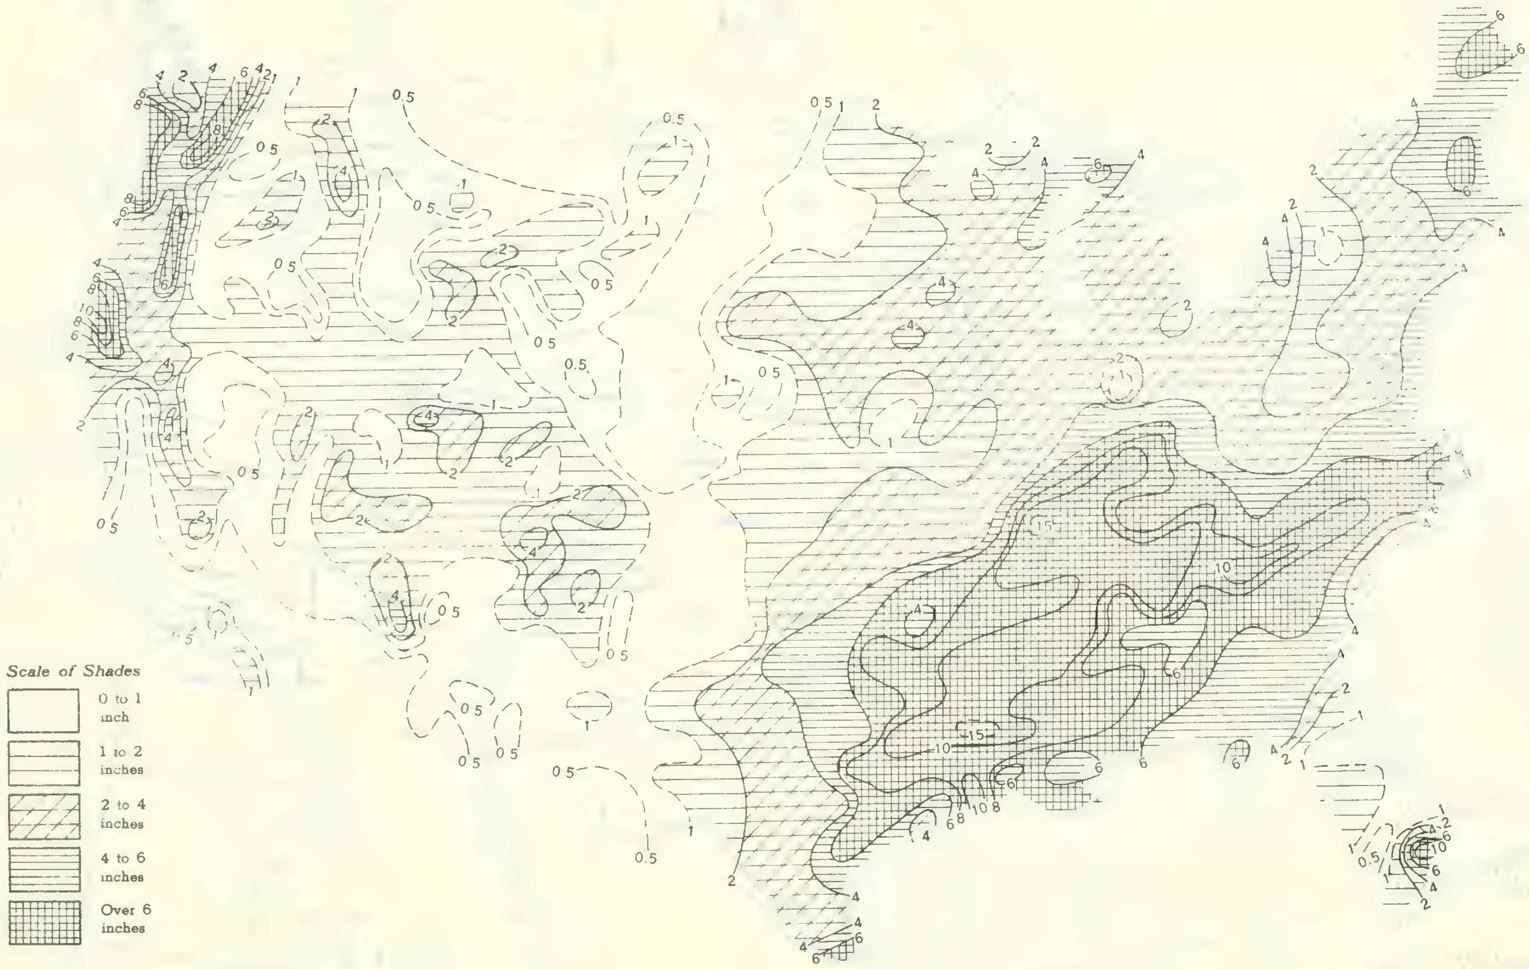
B. Departure of Average Temperature from Normal (°F.), November 1957.



A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.

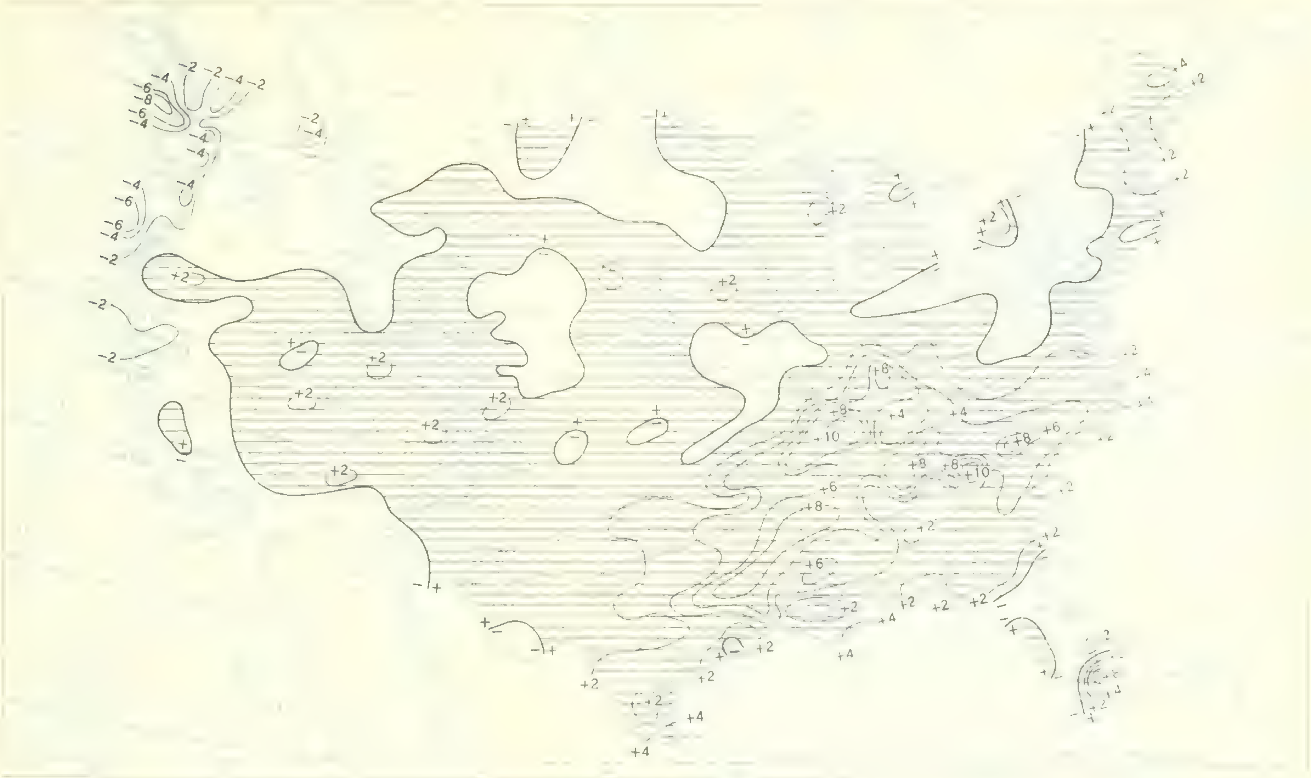
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), November 1957.

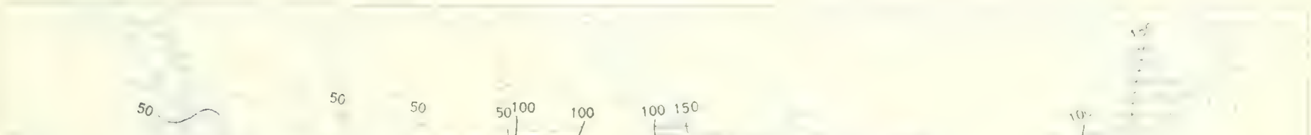


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), November 1957.

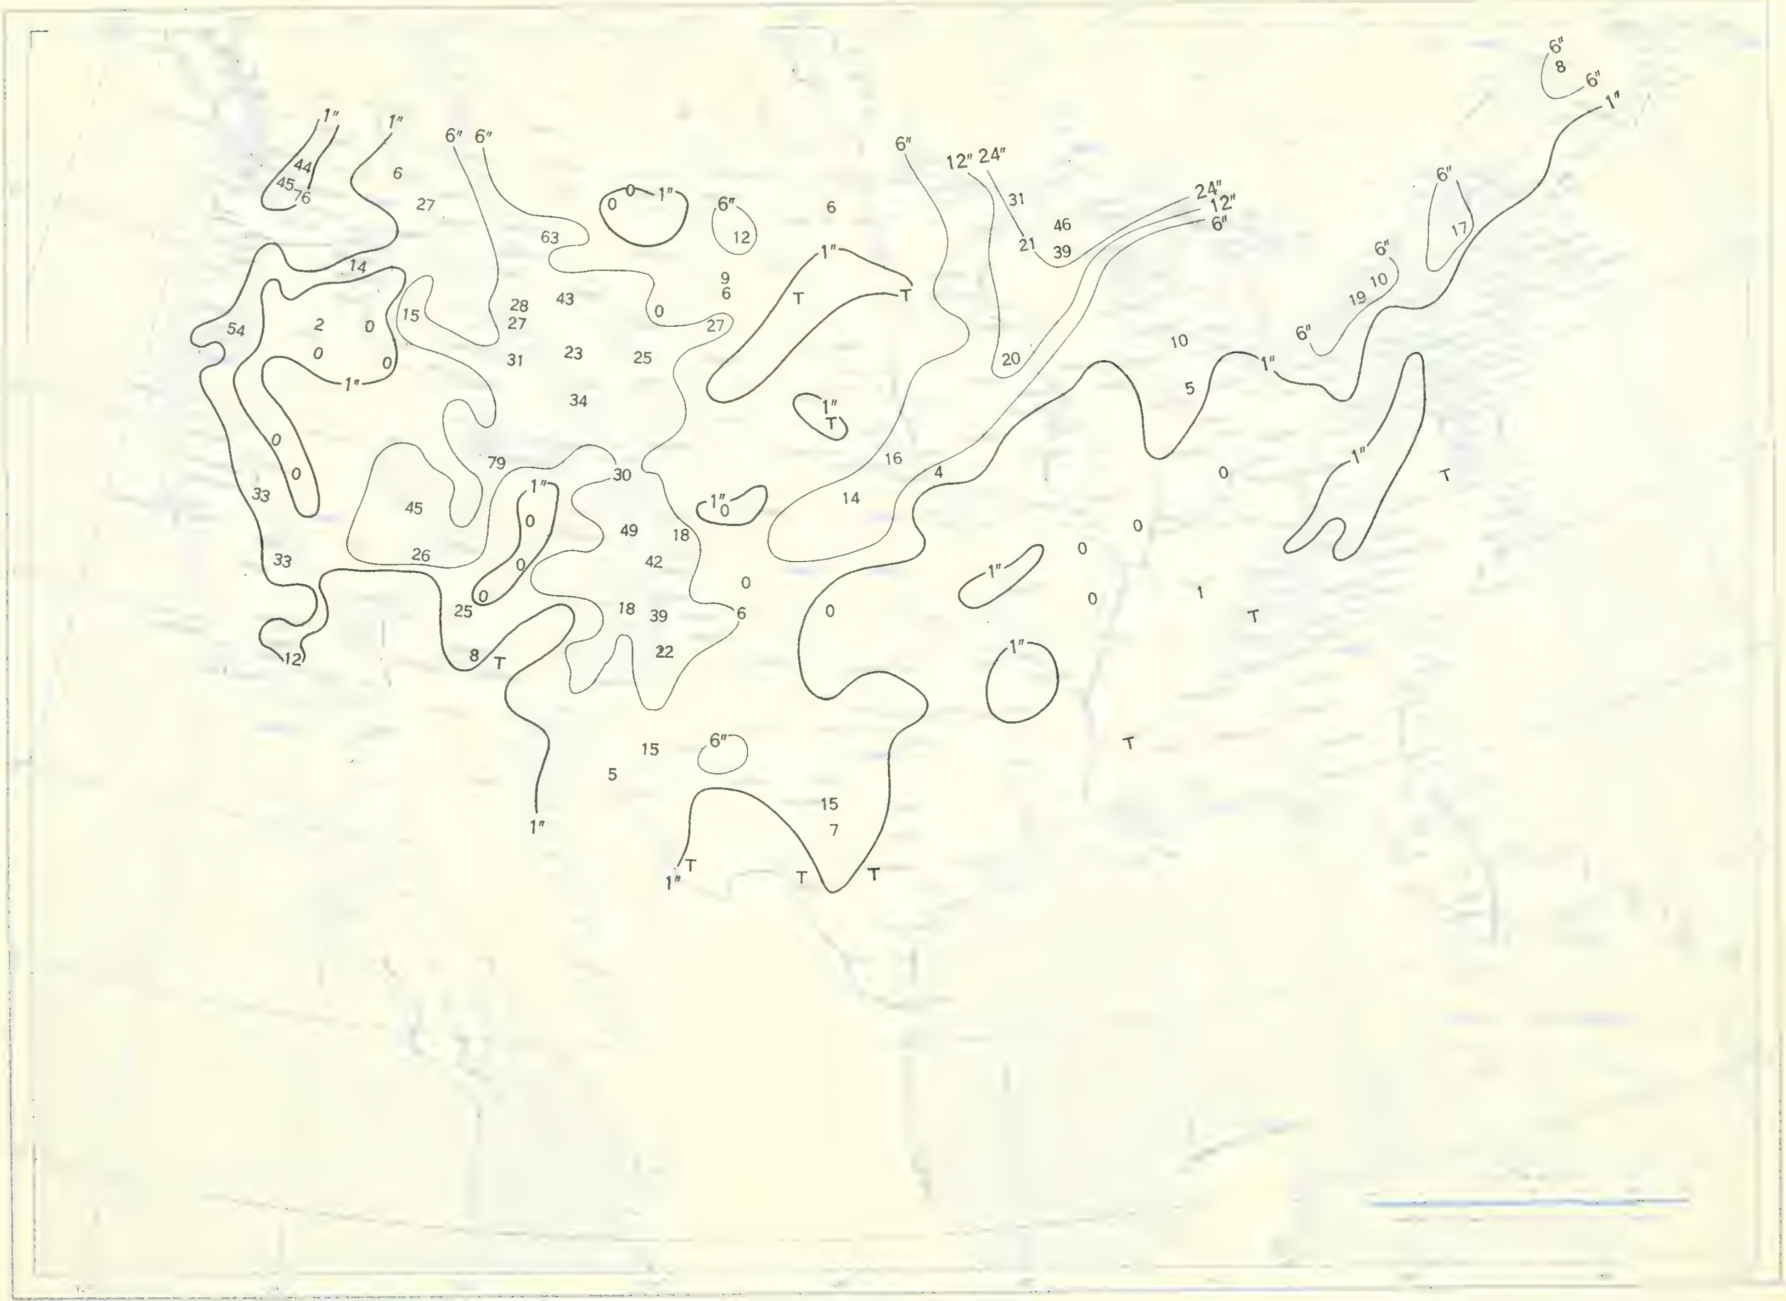


B. Percentage of Normal Precipitation, November 1957.



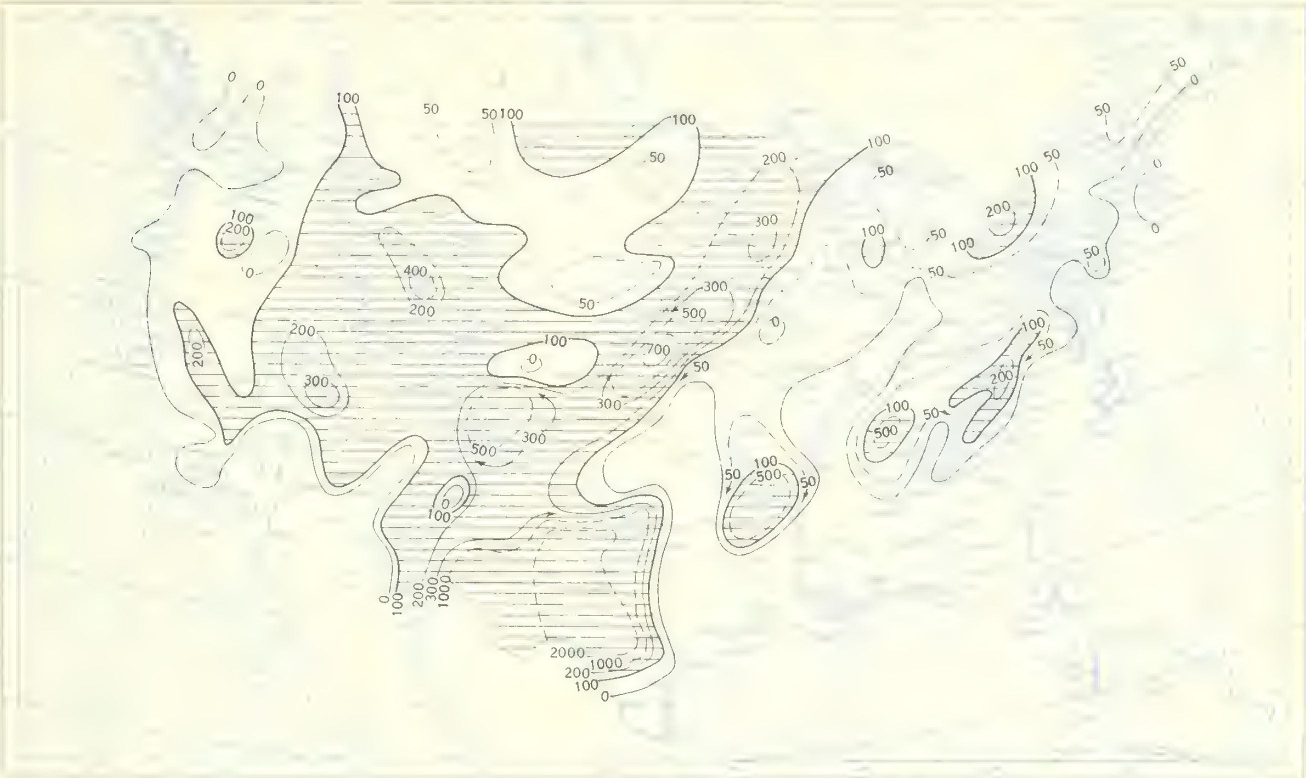
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart IV. Total Snowfall (Inches), November 1957.



This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, November 1957.

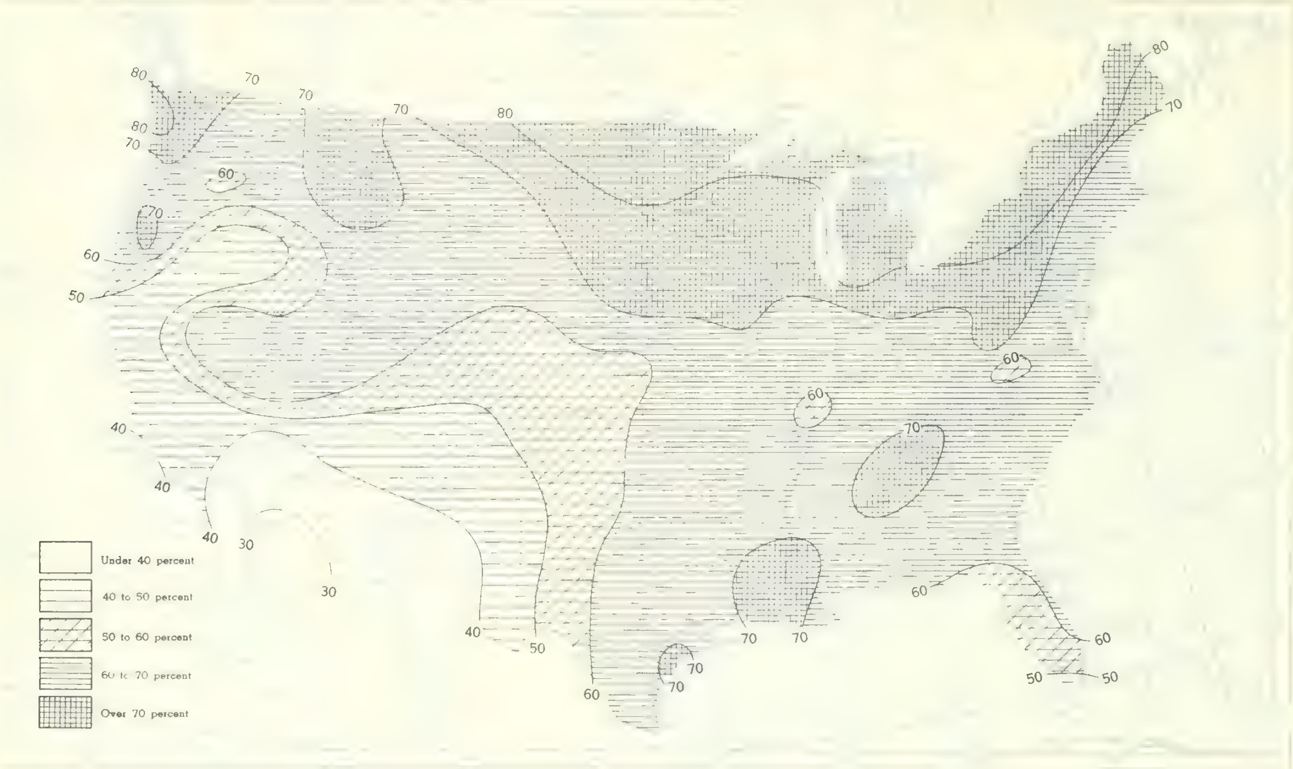


B. Depth of Snow on Ground (Inches), 7:00 a. m. E. S. T.

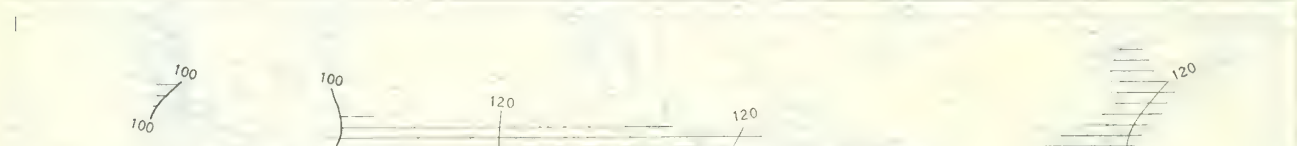
DATA NOT AVAILABLE

A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:00 a. m. E. S. T., of the Monday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, November 1957.

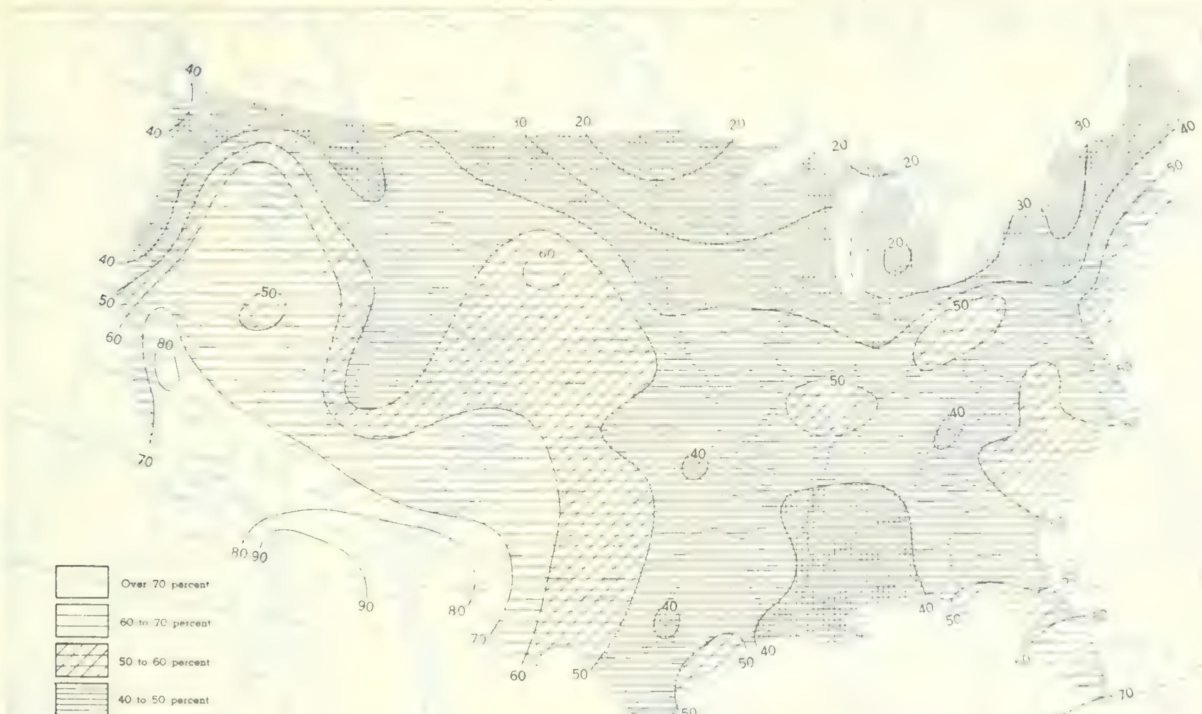


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, November 1957.

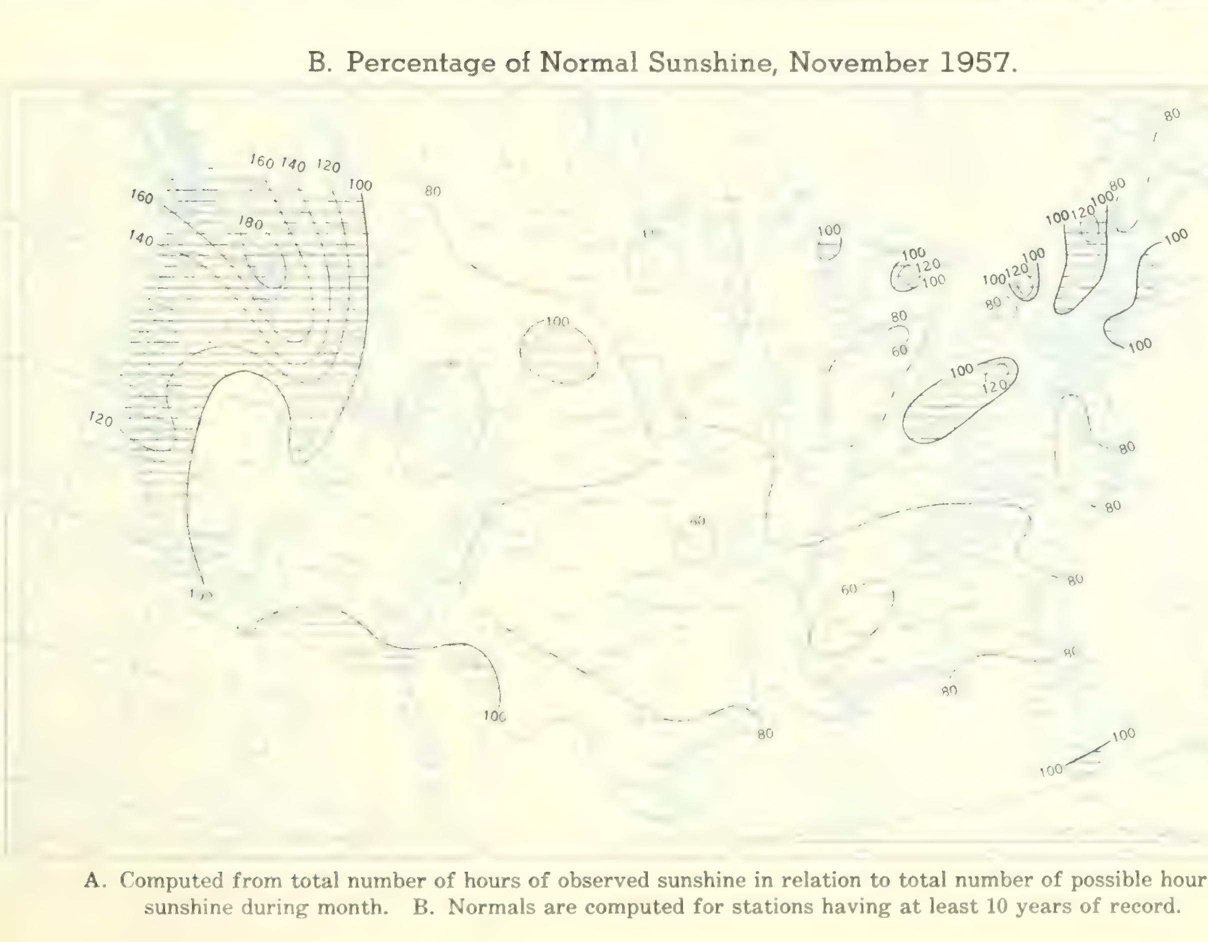


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, November 1957.



B. Percentage of Normal Sunshine, November 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, November 1957. Inset: Percentage of Mean Daily Solar Radiation, November 1957. (Mean based on period 1951-55.)

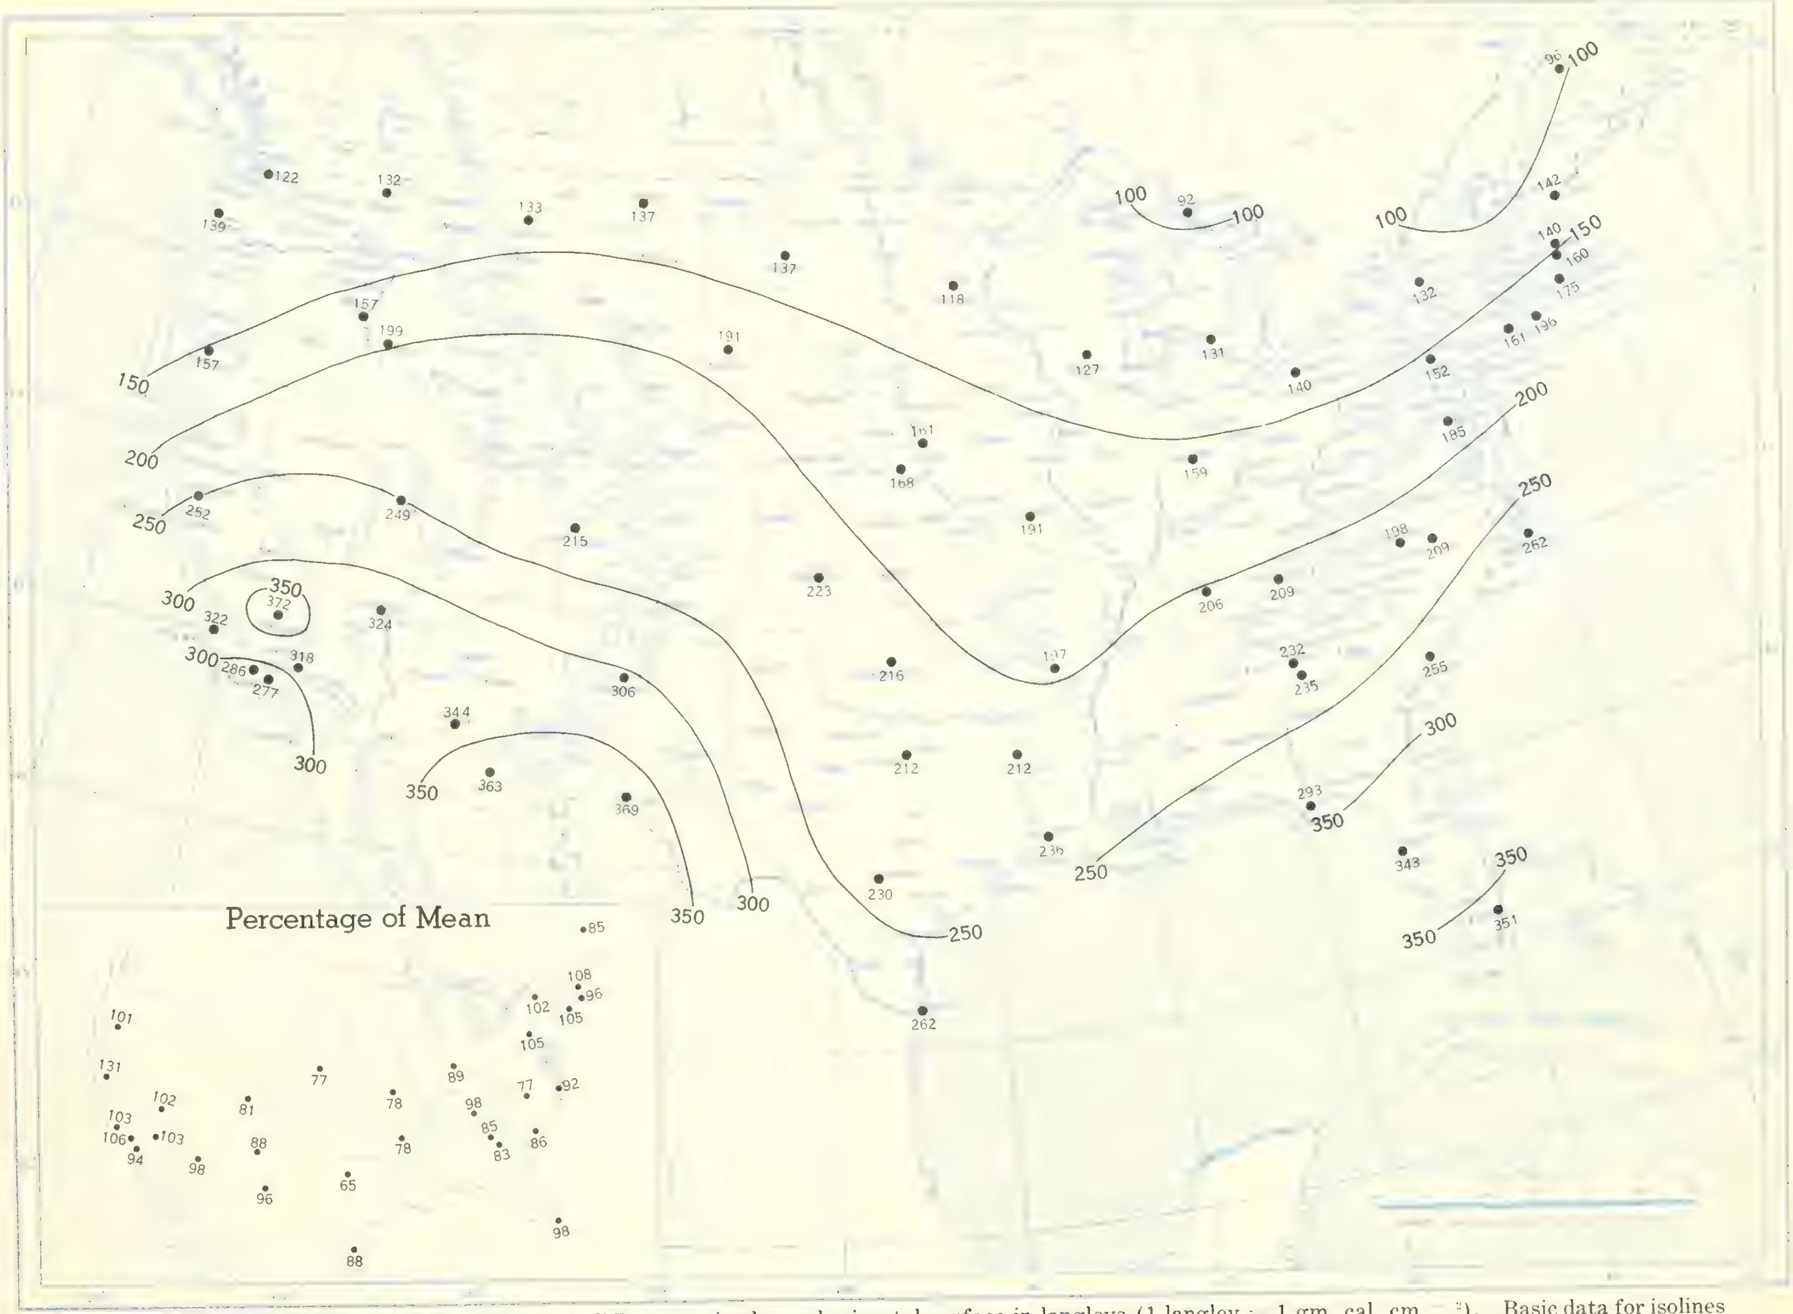


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. $cm.^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown. The inset shows the percentage of the mean based on the period 1951-55.

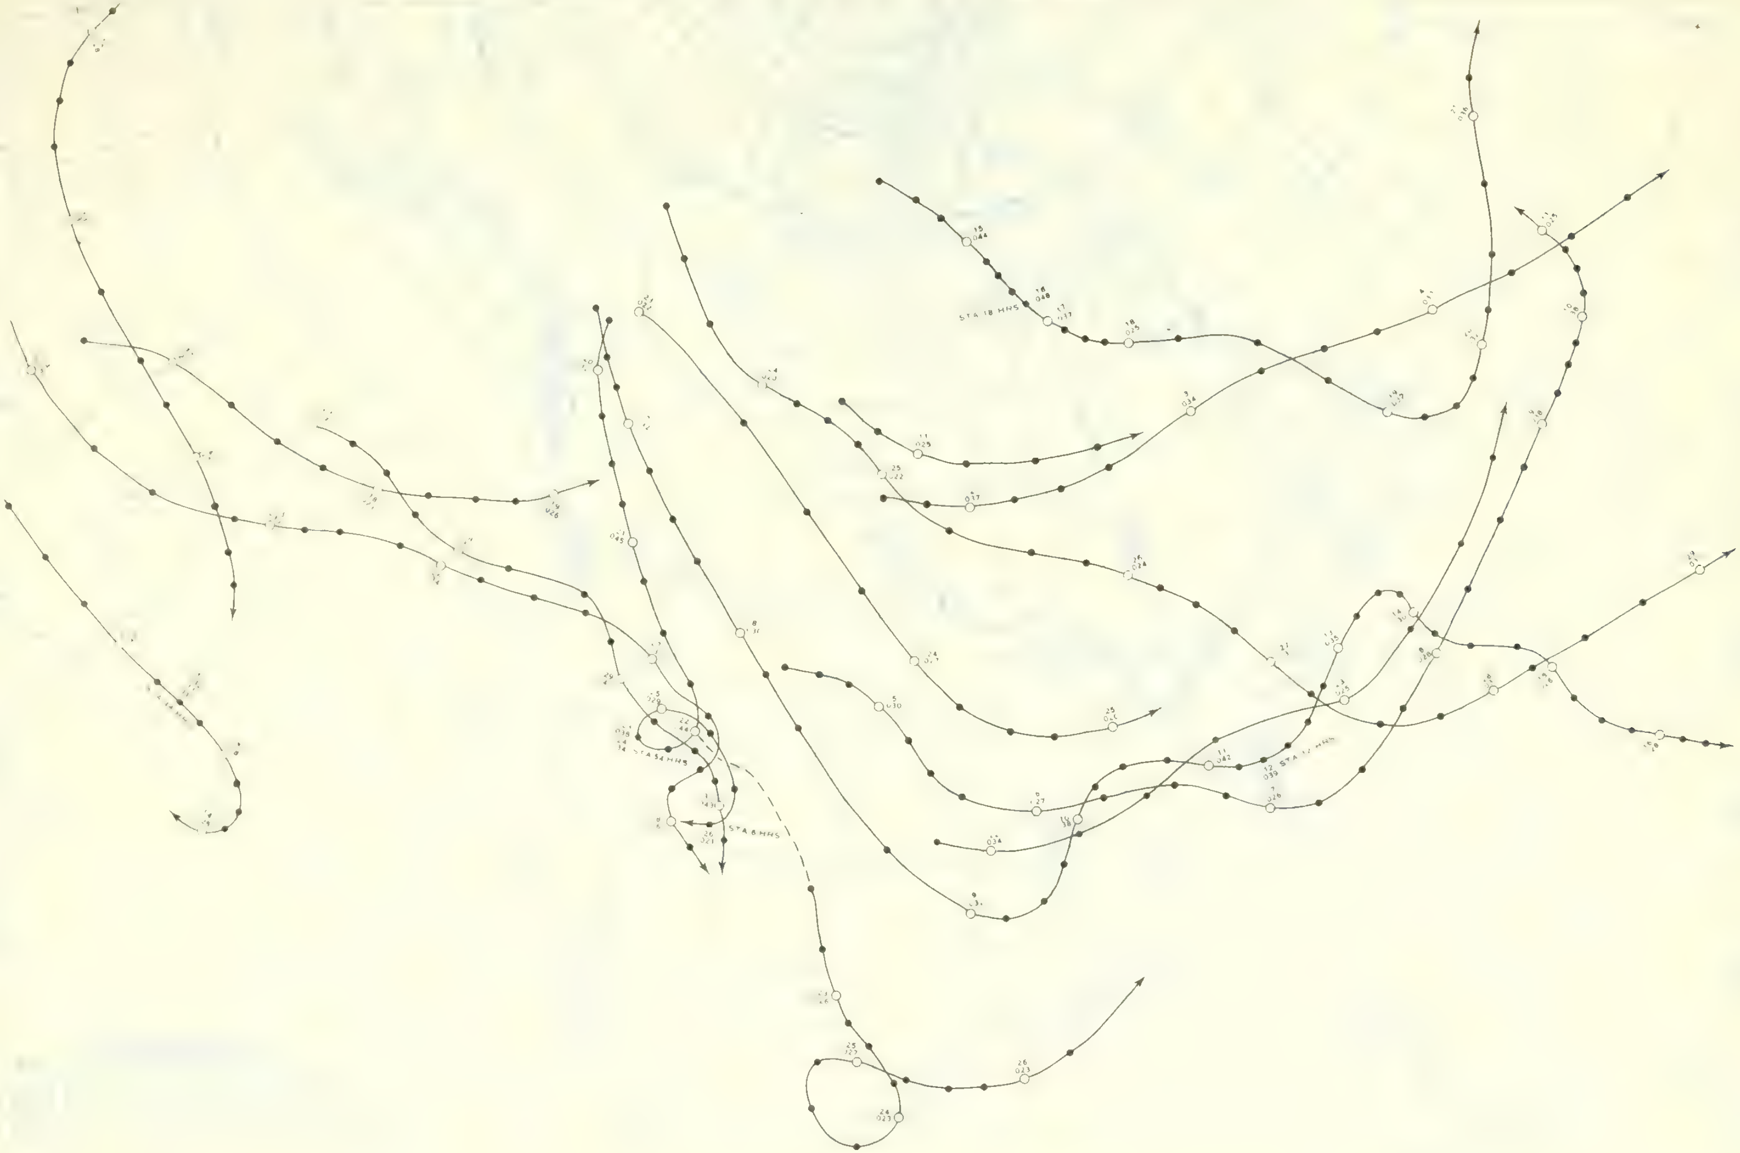
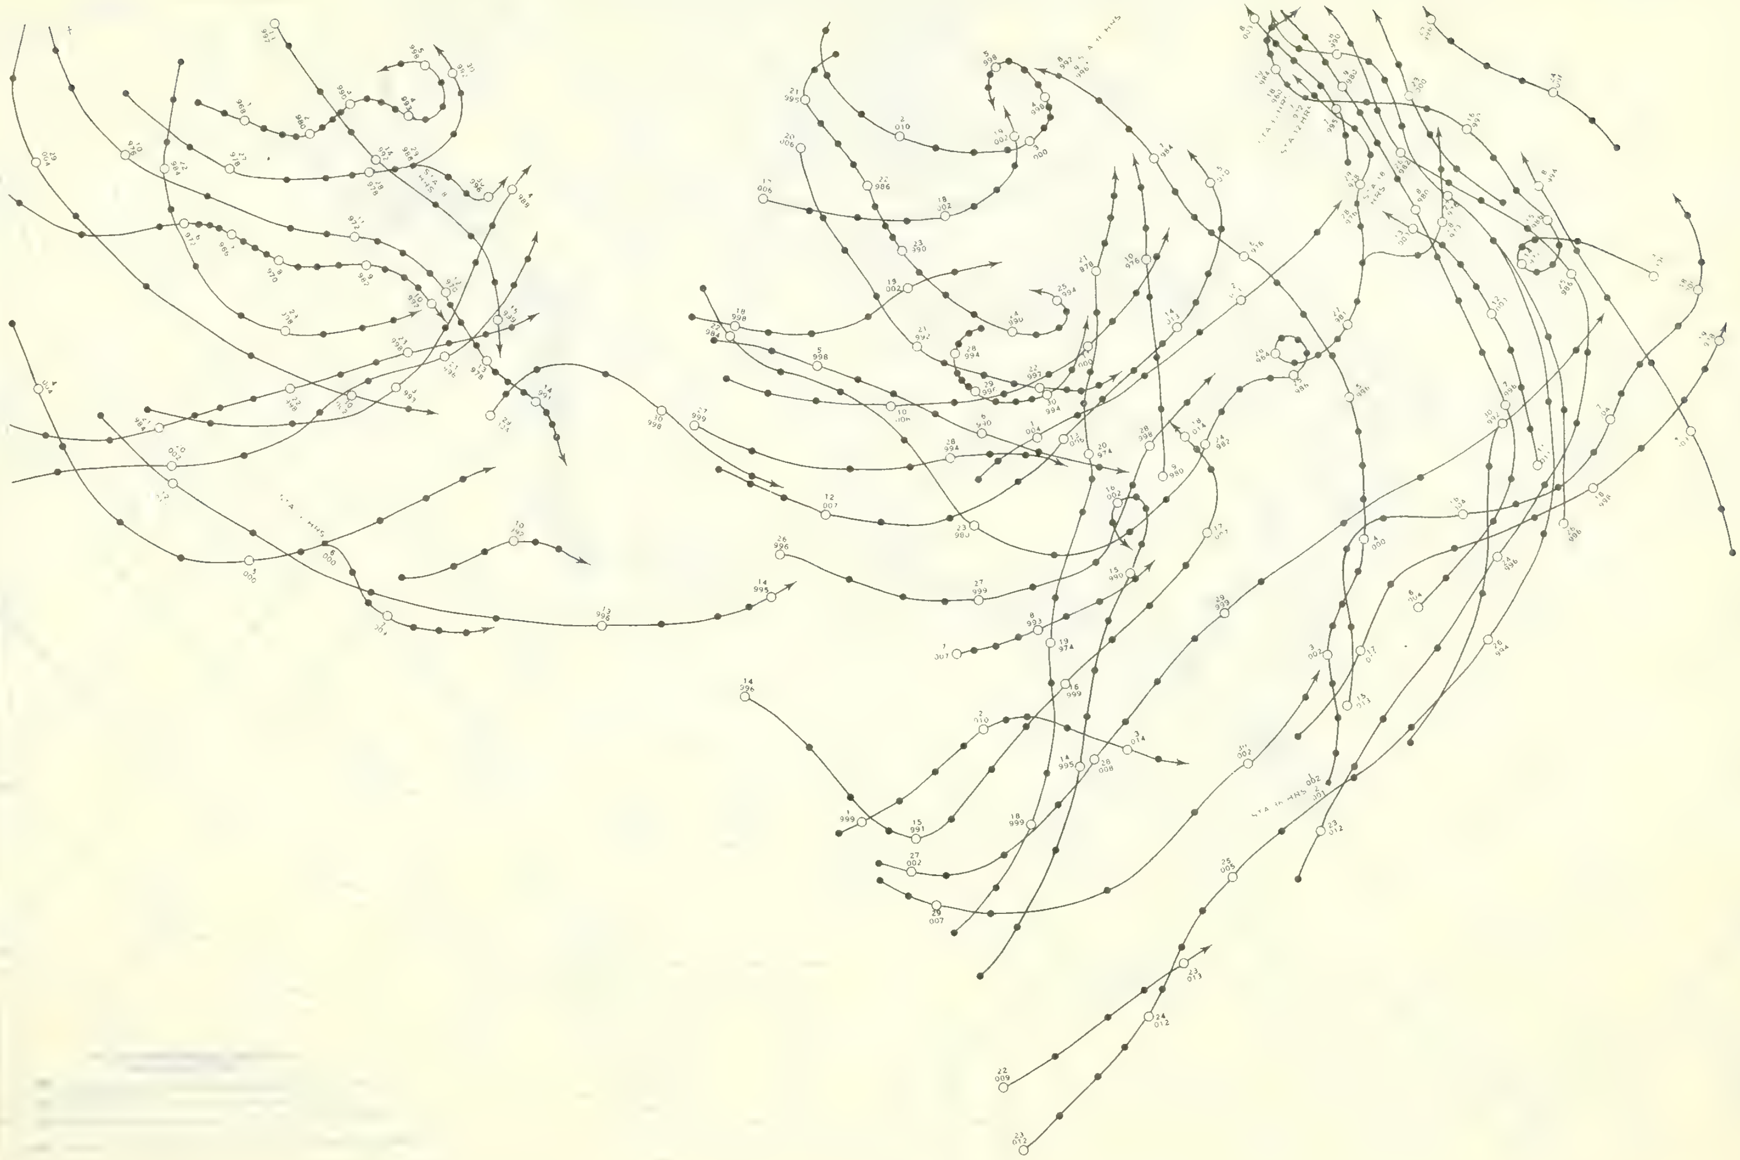
Chart IX. Tracks of Centers of Anticyclones at Sea Level, November 1957.



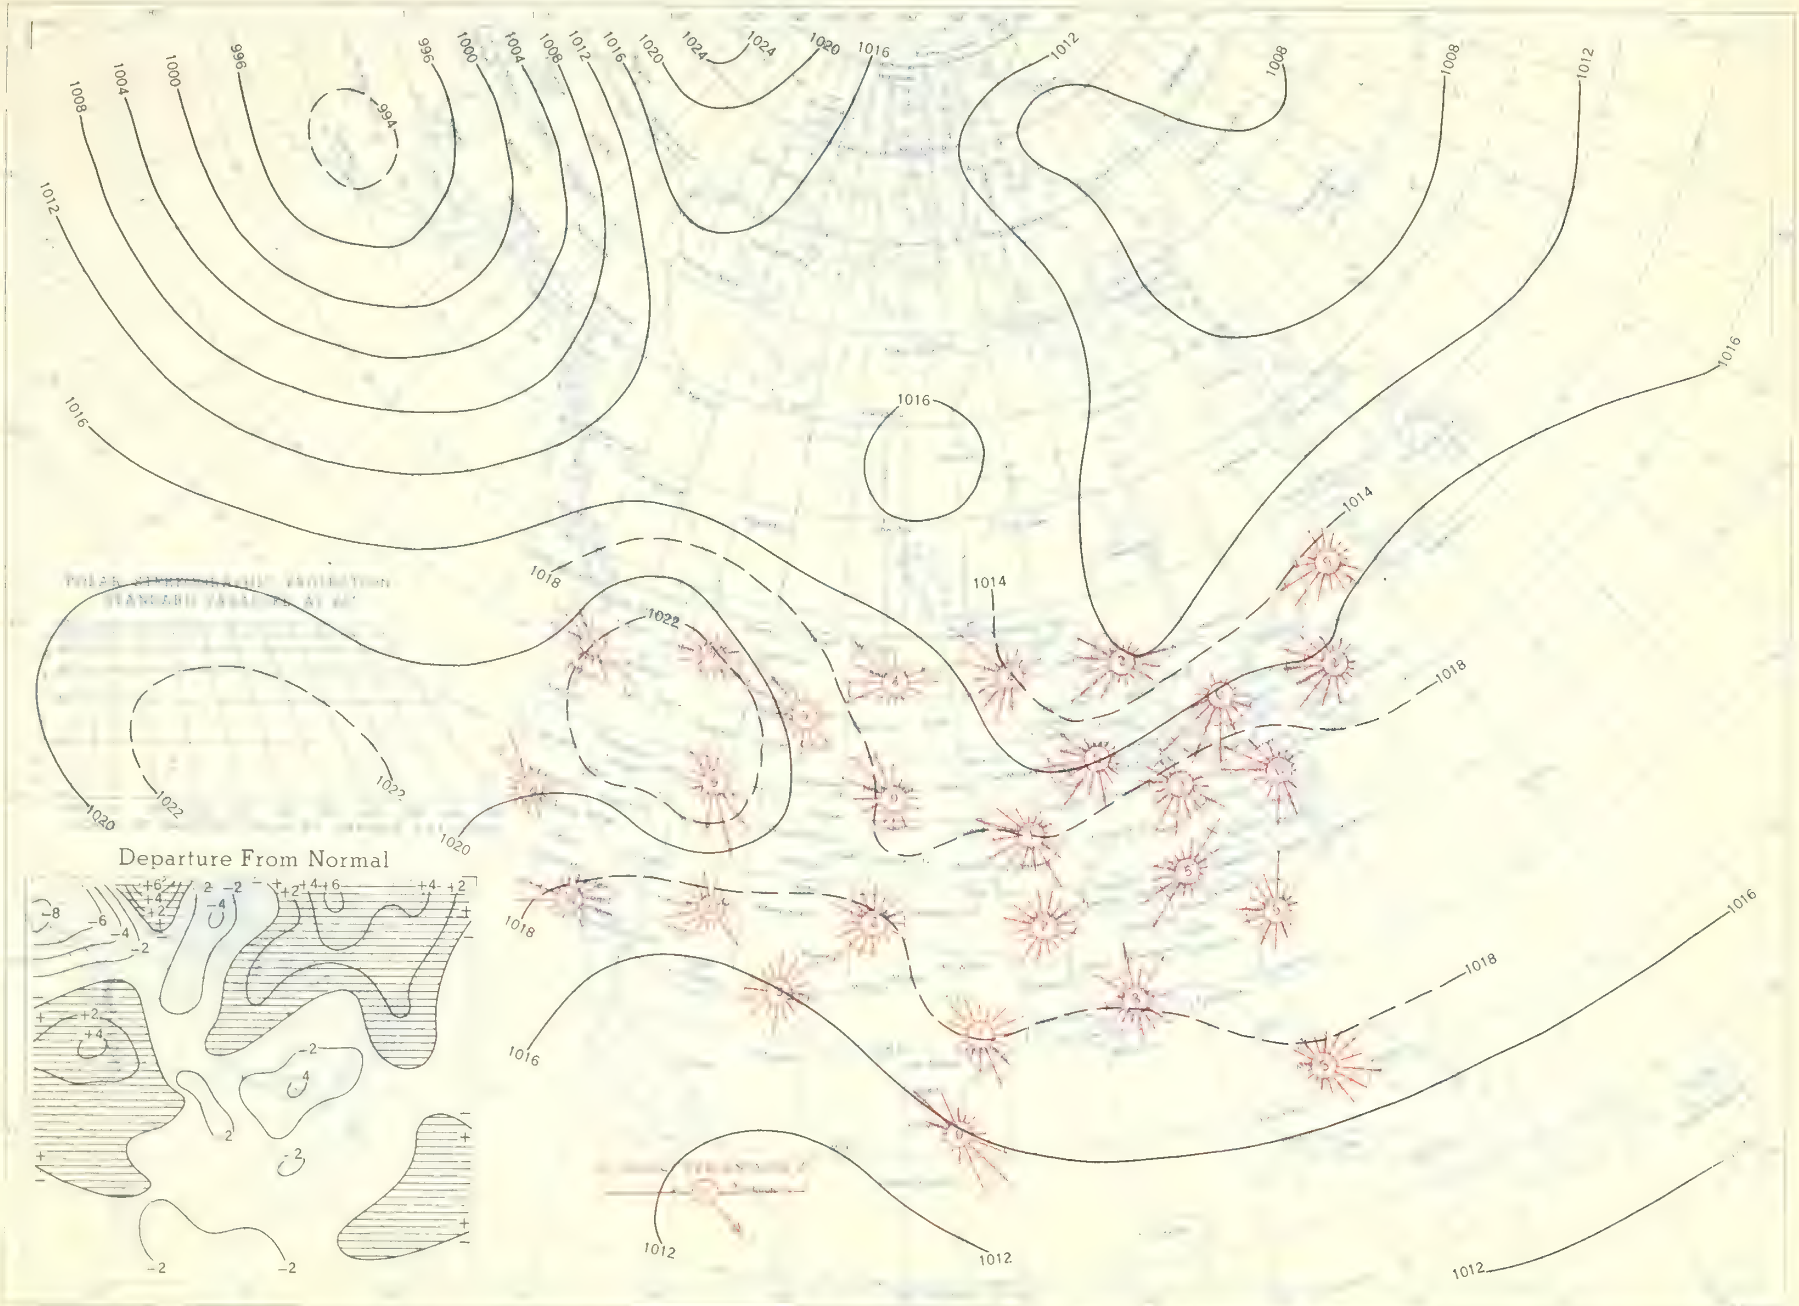
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, November 1957.



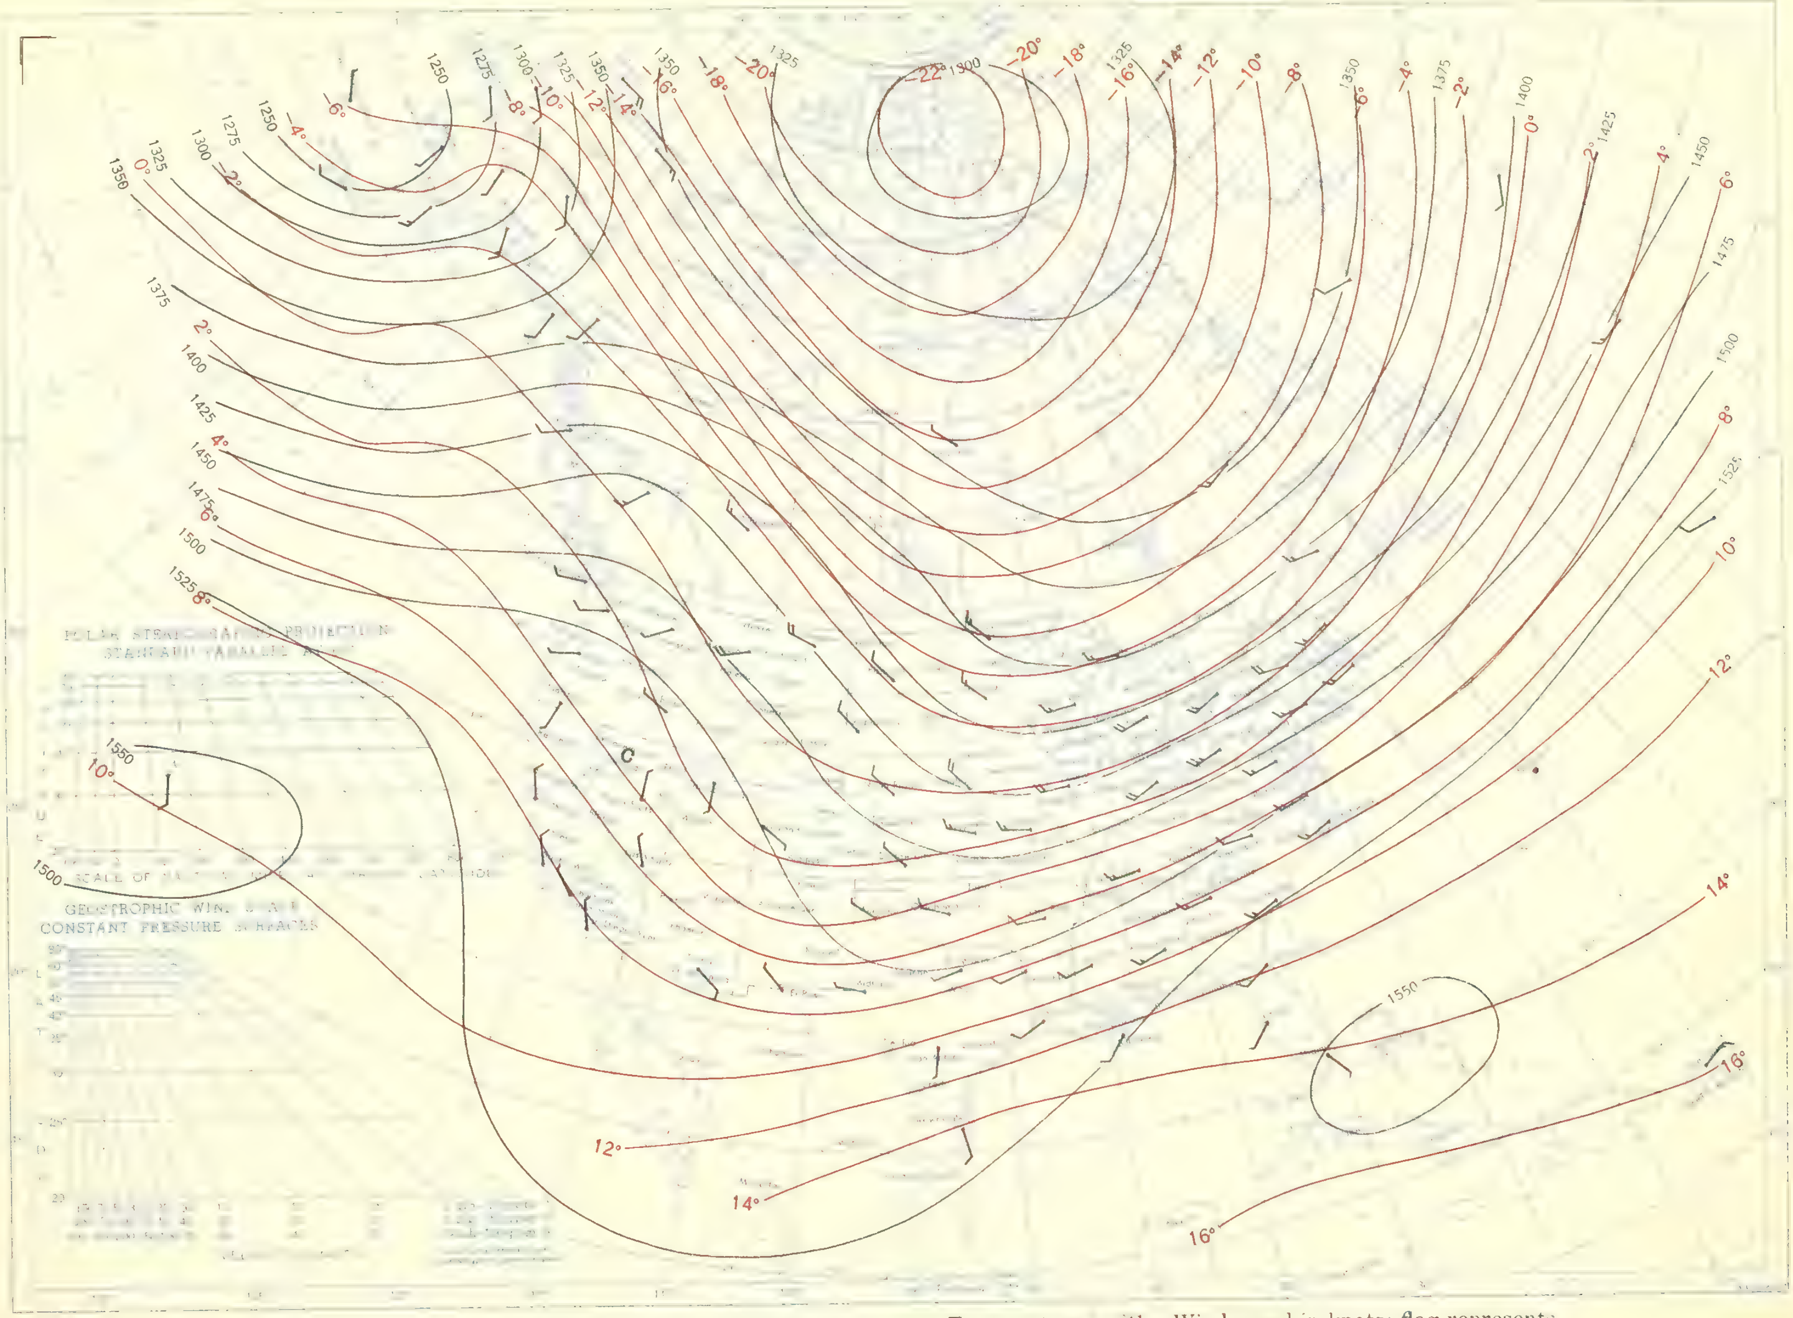
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, November 1957. Inset: Departure of Average Pressure (mb.) from Normal, November 1957.



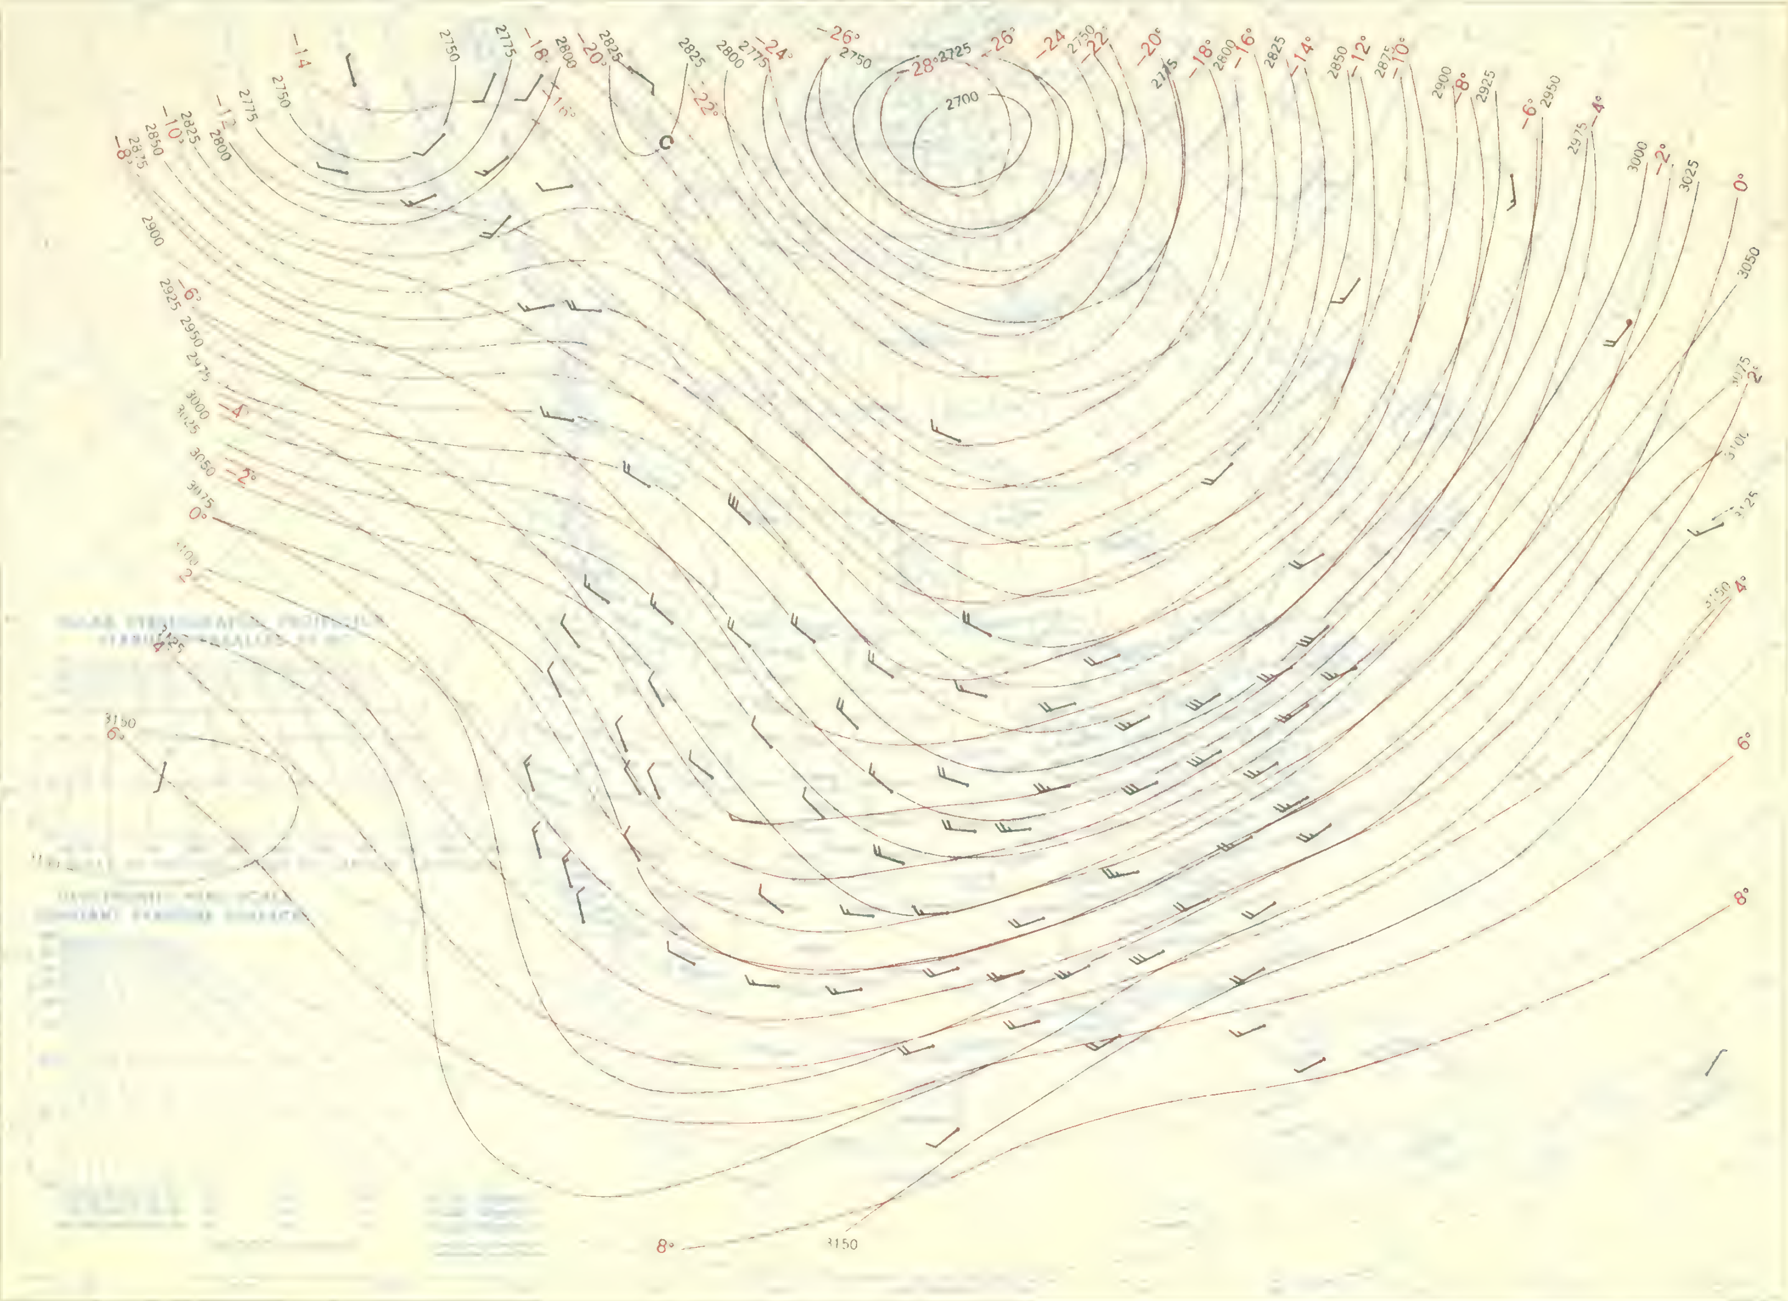
Average sea level pressures are obtained from the averages of the 7:00 a.m. and 7:00 p.m. E.S.T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



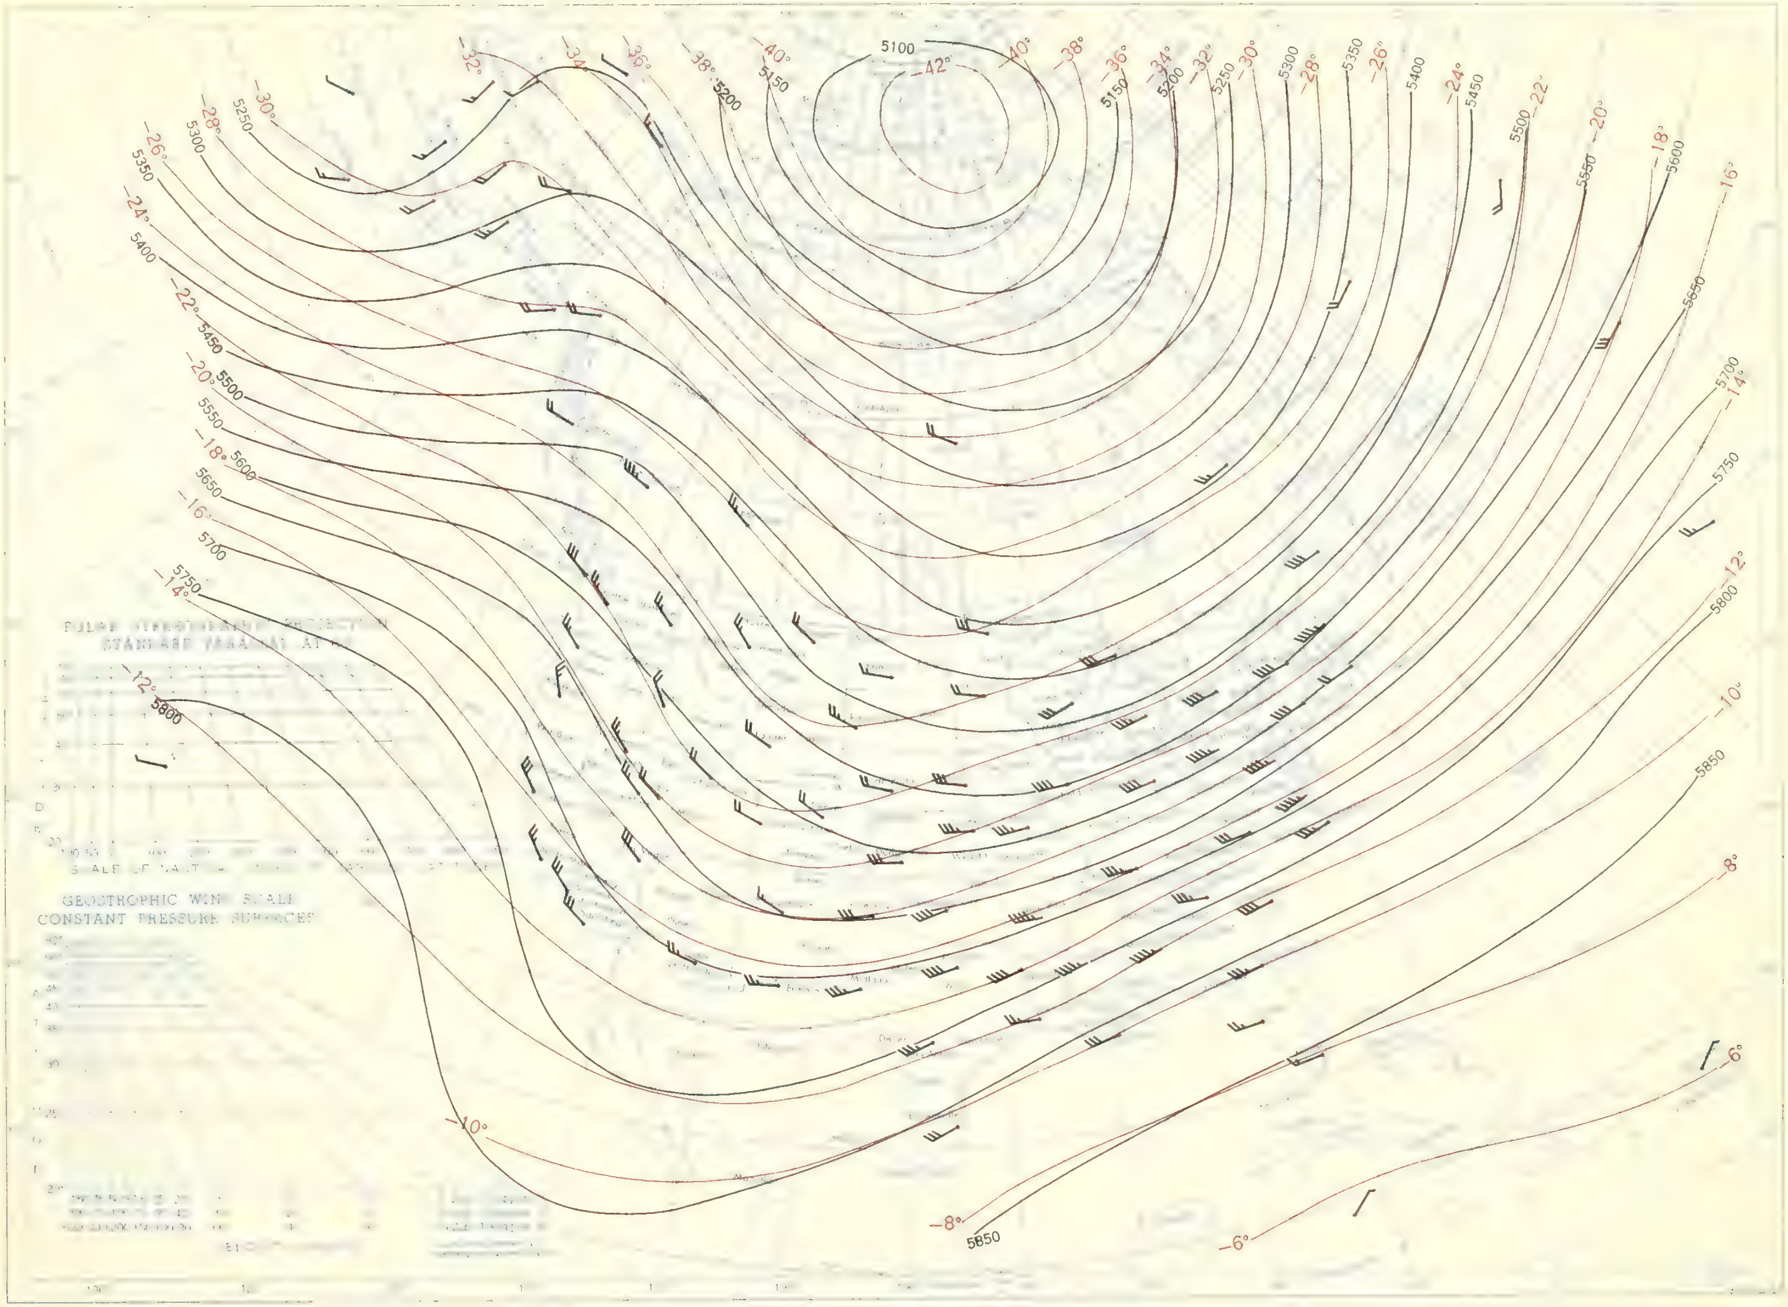
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



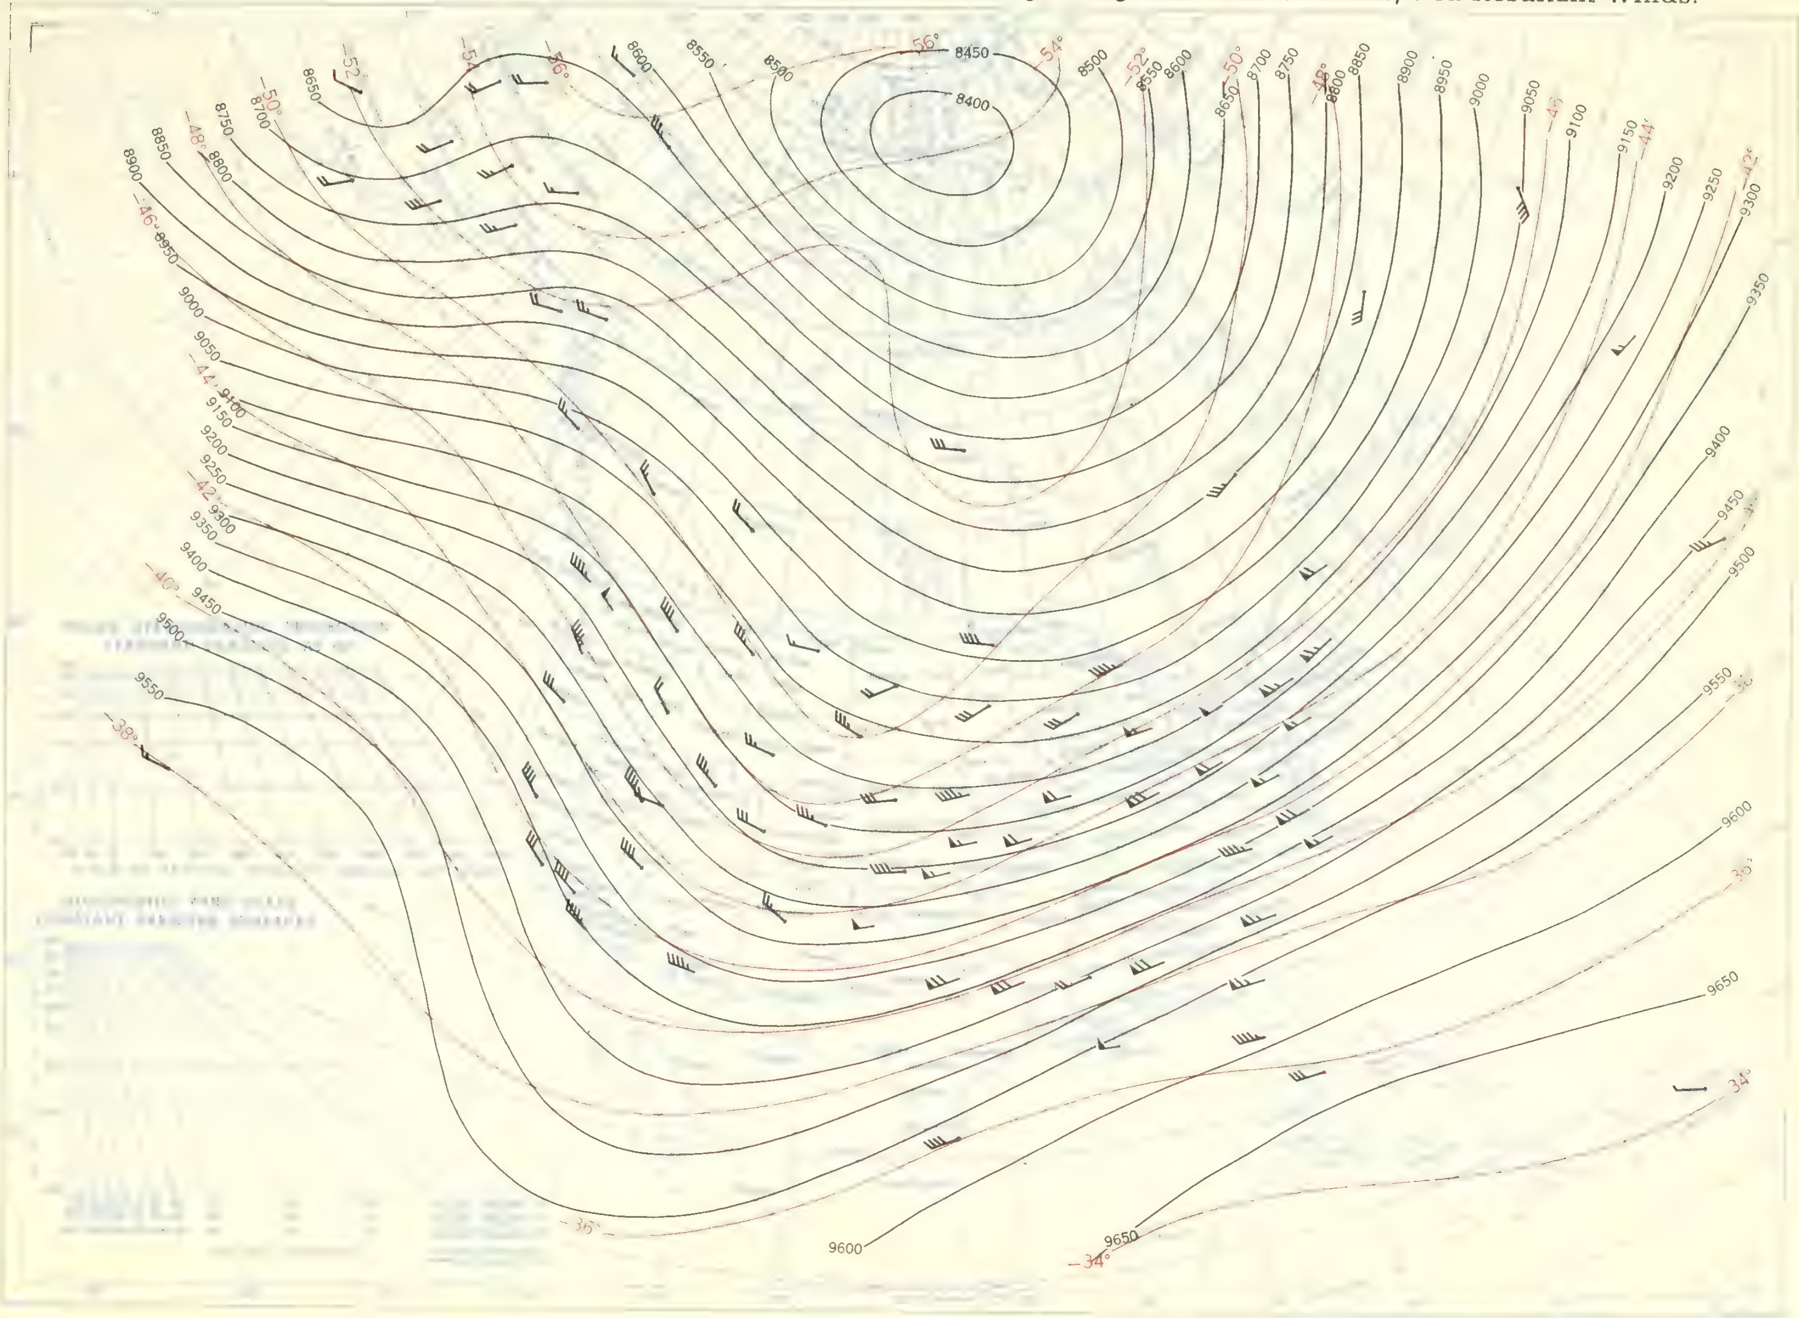
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



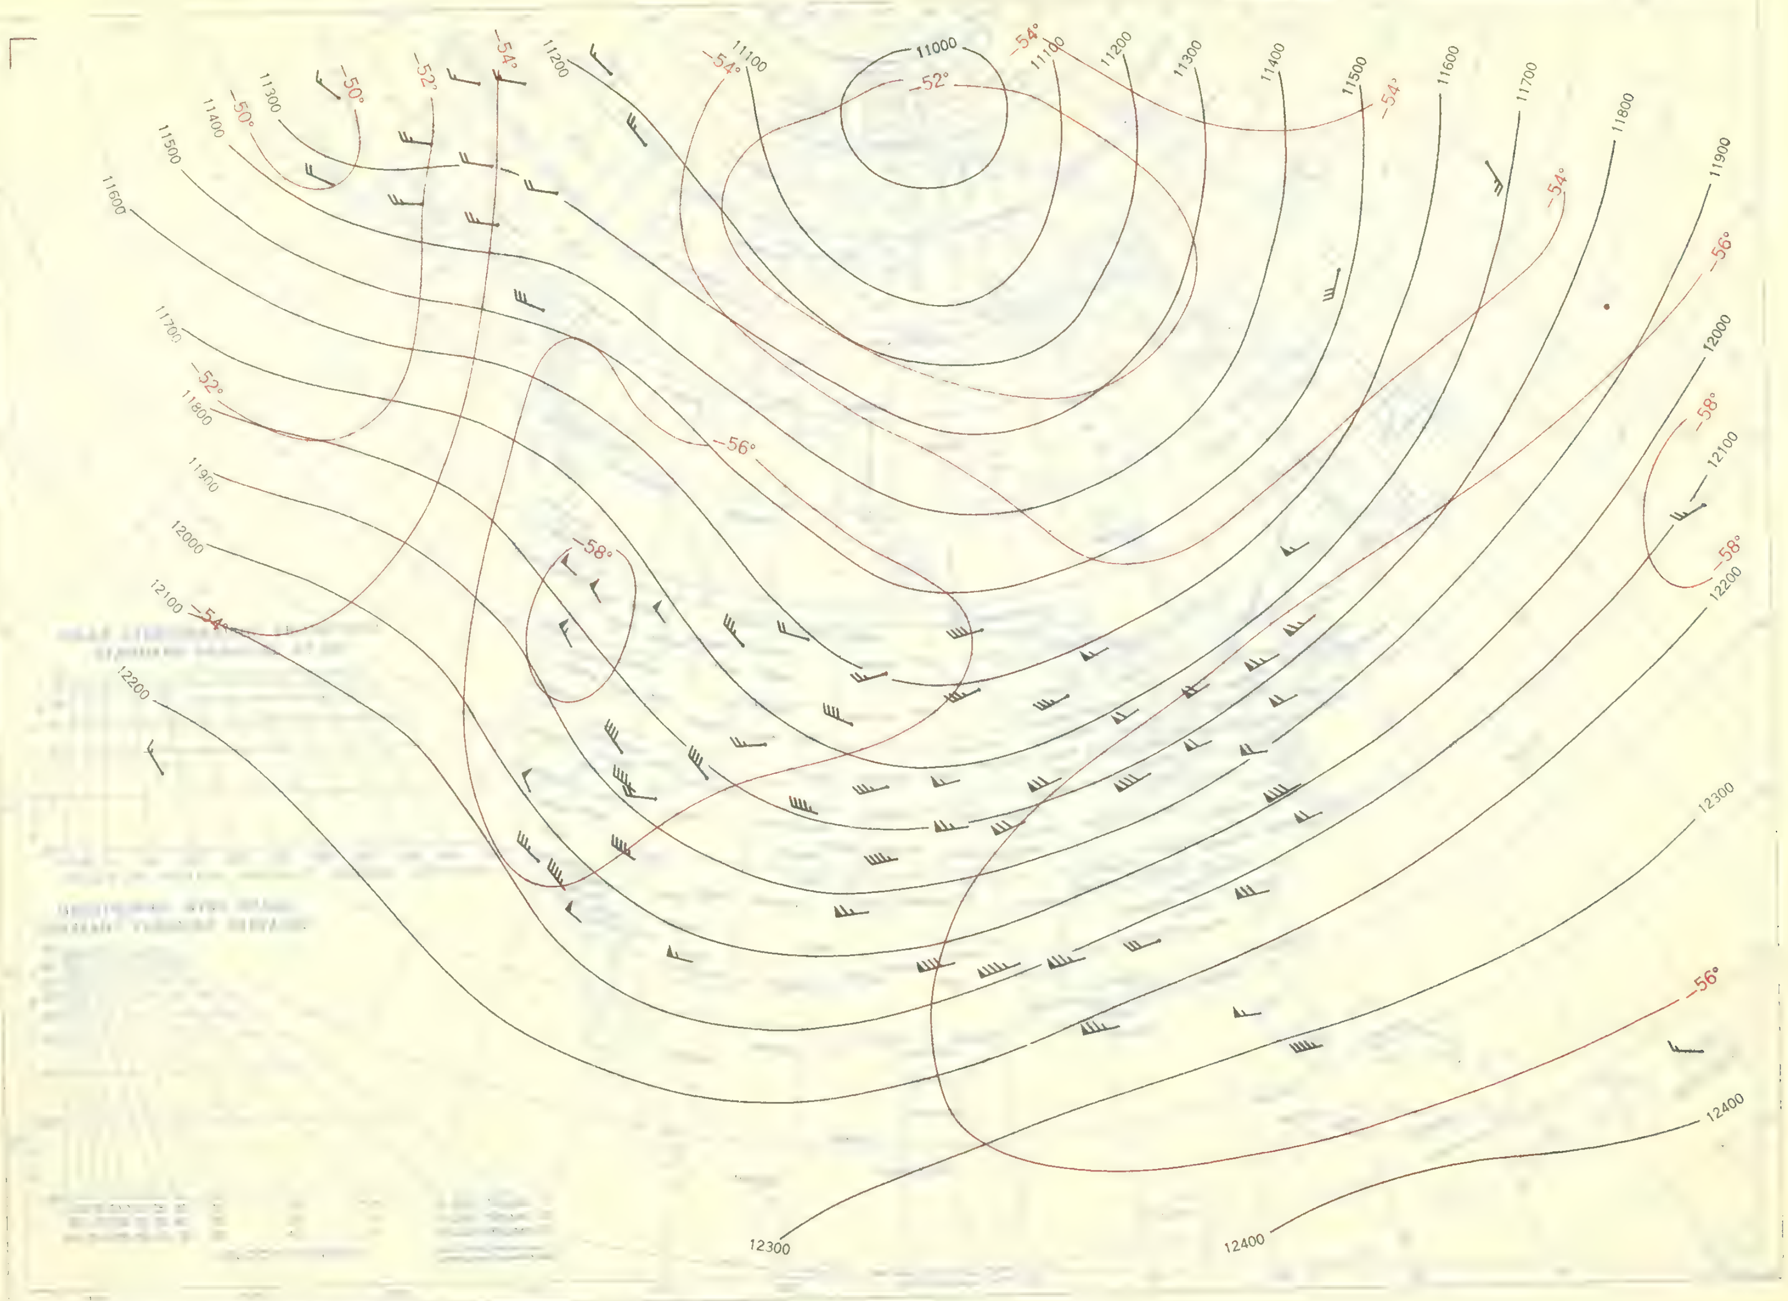
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



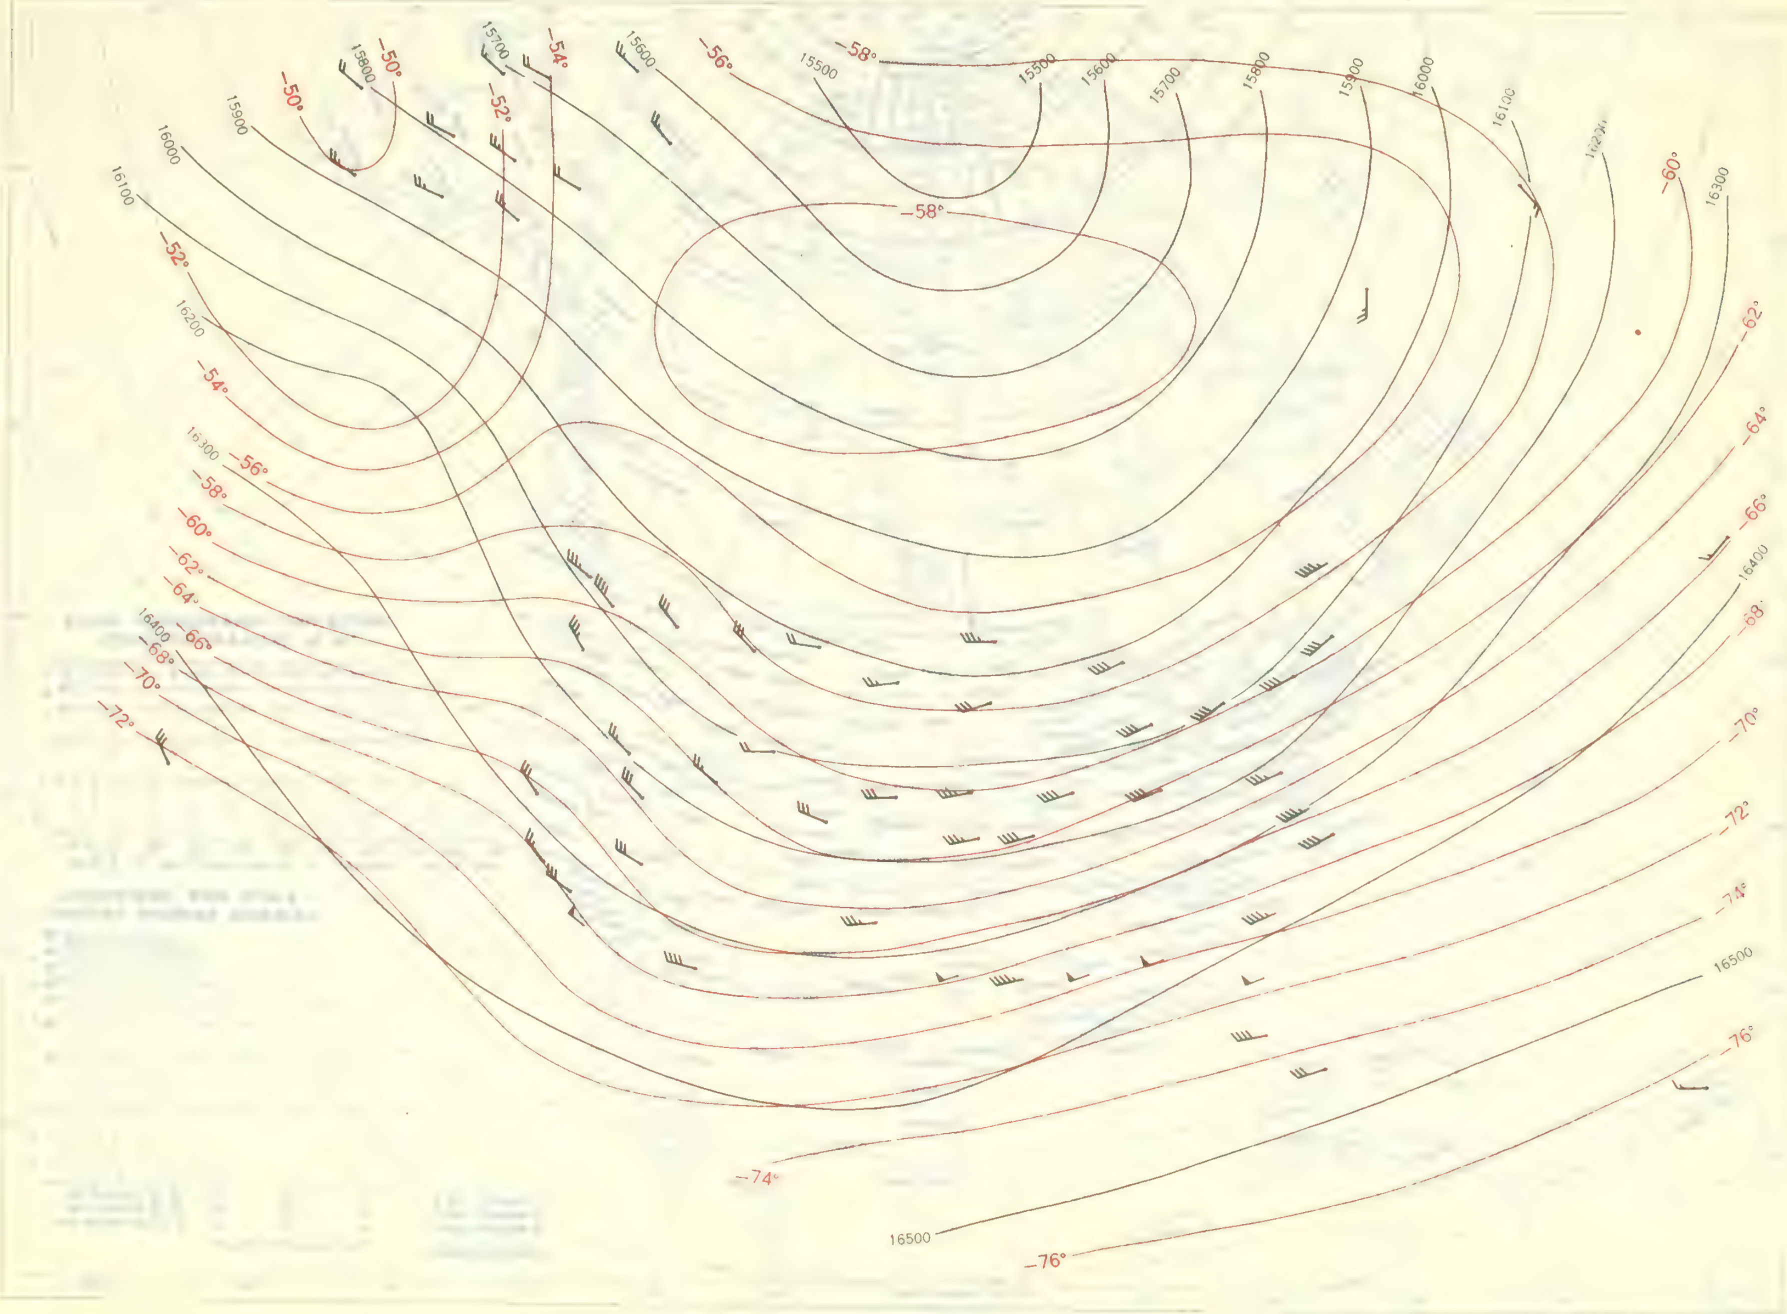
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, November 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 12

DECEMBER 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

A destructive freeze in Florida, an unusual outbreak of tornadoes in the middle Mississippi Valley, unseasonably mild temperatures everywhere except Florida and California's Central Valley, and heavy precipitation in the Ohio Valley and Northeast were the month's main weather features. Owing to persistent abnormally mild temperatures, snow and ice in northern areas were less than usual or entirely lacking. In the Northeast, the heavy precipitation relieved water shortages brought on in many sections by summer and early fall drought. At the end of the month the snowpack in the Cascade and central Rockies was above normal, but was below normal in some southern ranges. Soil moisture was excessive in much of the South, and generally ample elsewhere.

TEMPERATURE.--Temperatures for December averaged as much as 14° above normal in the northern Great Plains, 8° in the Northeast, and 6° or more in all areas north of lines joining Austin, Tex., with Spokane, Wash., and Atlantic City, N. J., except the upper Great Lakes region where they were slightly less. Throughout this area the month was among the warmest Decembers on record. In the central and northern Great Plains, generally, it was the warmest December since the 1930's, and the warmest of record at a few scattered stations including Havre, Mont., 33.9°; Sheridan, Wyo., 35.0°; and Norfolk, Nebr., 32.5°. At Concord, N. H., it was the warmest December since 1923, and at Providence, R. I., the second warmest on record. Havre, Mont., observed only a trace of snow, the least amount for December on record. Mild weather was unusually persistent in the northern Plains where several stations including Great Falls, Mont., reported above normal temperatures every day of the month. Temperatures also were abnormally mild along the southern California coast, where San Diego reported a monthly average of 61.4°, the highest on record dating back to 1872, with 84° on the 9th and 81° on the 11th establishing new record high temperatures for those dates.

Temperatures averaged slightly below normal in California's Central Valley, due mainly to low daytime temperatures held below normal levels by cloudiness. Sacramento had 25 cloudy days, equaling the record since 1877. The month also was 2° or more colder than normal in Florida.

High pressure areas from the Pacific moving across the southern United States brought record-low temperatures to southern Texas on the 1st, ending the tender vegetable harvest in that area. Freezing temperatures and frost occurred in parts of northern Florida during the first week.

The most extensive and only major outbreak of Polar air during the month occurred from the 10th to the 13th. Temperatures were reduced to subzero levels on 3 days in the upper Mississippi Basin and to subfreezing levels in all southern areas east of the Rockies except the extreme southern tip of Texas and extreme southern Florida. In Florida low readings on the 12th and 13th, approximating those of the more recent historic freezes of December 1934 and January 1940, caused extensive damage to citrus, truck, and other crops. A surge of Arctic air, affecting only northern areas east of the Rockies, brought subzero temperatures to the upper Mississippi Basin and northern Great Plains the last 4 days of the month.

Extreme temperatures for the month ranged from 90° at Bonita, Calif., on the 9th to -35° at Bondurant, Wyo., on the 24th and Taylor Park, Colo., on the 31st.

PRECIPITATION.--In the western portions of the Pacific States and in most sections east of the Mississippi River, precipitation totaled 2 inches or more. Totals were 200 percent or more of normal at stations in the middle Mississippi Valley and Northeast. Indianapolis, Ind., and Worcester, Mass., reported their wettest Decembers on record, with totals of 6.70 and 6.92 inches, respectively. In Indiana and Illinois, heavy rains from the 17th to the 20th caused flooding along the Wabash River, resulting in some losses of unharvested crops.

Generous precipitation in the Northeast added to soil moisture and replenished water supplies that in some sections had been short since May. In New Jersey, where monthly totals ranged from 3.34 to 12.10 inches, reservoirs were up 10 to 14 feet. In Pennsylvania monthly totals, ranging from 2.20 to 11.21 inches, replenished wells and streams throughout the State. In Connecticut, Massachusetts, and Rhode Island no station reported less than 3 inches for the month.

In the Far West, precipitation was normal or above in Washington, Oregon, and central and northern California, with totals ranging up to 10 inches or more along the north Pacific coast and generally from 1 to 2 inches inland. Most precipitation in these areas fell during the second half of the month. Monthly totals in the Nation were topped by 32.84 inches at Valsetz, Oreg.

In most of the Great Plains and Far Southwest, precipitation for the month generally totaling under one-half inch was less than 25 percent of normal. At the end of the month surface soil was becoming quite dry in some sections of the western portions of the central and lower Great Plains where some soil erosion occurred. The lack of moisture was not serious, however, and the winter grain outlook was much better for the season than it had been for several years.

SNOW.--Owing to mild December temperatures, the snow cover was much less extensive than usual throughout the month, being limited generally to some extreme north-central sections and mountainous areas of the Northeast and Far West.

One of the heavier snowstorms of the month moved from the middle Mississippi Valley eastward to the Atlantic coast on the 3d and 4th. One to 3 inches fell in central Illinois, several inches in central Indiana, 6 to 8 inches in central Ohio, and up to a foot or more locally along the east coast from northern Virginia to northern New Jersey. The heavy snow caused considerable traffic conjestion

GENERAL SUMMARY OF WEATHER CONDITIONS—Continued

DECEMBER 1957

in many coastal cities, but it was all melted by warmer weather and rain on the 7th and 8th. During another storm on the 11th, moderate to heavy snow fell in the Appalachian region and Northeast and in local areas of the Ohio Valley and Great Lakes region. Amounts generally ranged from 2 to 6 inches in the Northeast. Warmer weather melted most of this snow during the following 3 days.

Snowfall during the second half of the month was significant mainly for the heavy falls in the Cascades, raising the snowpack to above normal there.

DESTRUCTIVE STORMS.--December storms were featured by an outbreak of tornadoes in Illinois and some adjacent areas of nearby states on the 18th and 19th. On the 18th and 19th, 22 funnel clouds were reported to have touched the ground in Illinois alone. More than a score of persons were killed, over 450 injured, and property damage amounted to millions of dollars.

Windstorms in the Pacific Northwest caused minor damage over extensive areas on several occasions, with the worst storm occurring on the 25th. These storms were responsible for losses totaling several hundred thousand dollars.

On the 10th, losses of corn and milo in Nebraska blown down by high winds were estimated at several hundred thousand dollars.

Winds and rains over the Northeast on the 20th and 21st caused damage in Pennsylvania, New York, New Jersey, and New England totaling several hundred thousand dollars.

CONDENSED CLIMATOLOGICAL SUMMARY

Data from airport unless otherwise specified. U indicates Urban, R indicates Rural, sites.

* Data entered in column "Fastest Mile" is the fastest mile observed. This station is not equipped with automatic recording wind instrument.

+ And also on a later date or dates.

a Maximum hourly average † Airport data ‡ Peak gust

# Number of days maximum 70° or above for Alaskan stations. ⊕ Sun continuously below horizon during December.

ø Station pressures apply to elevations shown in Table 10b of the annual issue of this publication.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
NEW ENGLAND Northern and Central portions	1	A.m.			2	3	5	1	Wind, rain, and snow	Winds felled trees, limbs, and poles, snapping phone and powerwires in 4-state area. Most severe damage in central Massachusetts, where gusts reached 70 m.p.h. Many TV antennas and some chimneys, signs, and plate-glass windows smashed. Barn blew down at Sterling, Mass., $9,000 loss, including livestock. Sawmill at Zoar, Mass., collapsed. House roof section blown off at Clarksburg, Mass. Trees fell on barn at Yarmouth, Maine, and on several houses and 3 automobiles in Massachusetts. Falling limb injured man at Methuen, Mass. Cabin cruiser blown from moorings at Nahant, Mass., and wrecked on rocks at Graves Light. Rain in southern portion. Snow in north, up to 8 inches in northern Maine. Automobile accidents due to storm killed 1 person at Troy, Vt., and another injured. Another injured at Farmington, Maine. 1 dead from overexertion at Mapleton, Maine. Damage estimated at $60,000 in Massachusetts, $20,000 in Maine, and $3,000 each in New Hampshire and Vermont.
RHODE ISLAND Central and southern portions	1	A.m.					3	1	Wind	High winds with gusts measured at 55 m.p.h., at WBAS Providence caused widespread damage to powerlines, trees, and billboards in affected area. Two 50-foot boats driven ashore at Newport Naval Base; damage estimated at $2,000. Numerous smaller boats capsized or driven ashore in Narragansett Bay. Telephone failures to 1,500 users and several large billboards, store awnings, and trees blown down in greater Providence area.
CALIFORNIA Ontario, San Bernardino County	2						1	1	Wind	Santa Ana type winds, reported reaching speeds exceeding 45 m.p.h., caused little apparent damage. House trailers ordered to stay off highways in area.
VIRGINIA Northern and western mountain areas	3-4	Afternoon -night							Snow and freeze	Snowfall up to 14 inches in Loudoun County and generally 6 to 8 inches in mountains of west and north. Many schools closed in these areas because of slippery roads and highways.
CONNECTICUT and RHODE ISLAND Southern half of both States	3-4	Late p.m. 3d-late p.m. 4th				11			Snow and wind	Coastal storm yielded 10 inches of snow at Stamford, decreasing to 5 inches at New Haven and to 3 inches in southeast sections. Trace or less north of Hartford-Providence line. Traffic badly snarled on highways from New Haven to New York, with trips normally taking 1/2 to 2 hours increased to 4 to 6 hours. Numerous minor automobile accidents with injuries reported to 6 persons, while 4 persons hurt in falls on slippery walks. Winds blew in 2 large store windows in Bridgeport and forced overnight suspension of Narragansett Bay ferries. Deep snow in southwest forced abandonment of hundreds of cars and necessitated lodging of many persons not able to reach homes.
MARYLAND and DELAWARE	3-4				2			1	Snow	One of worst snowstorms in years paralyzed traffic and caused other troubles. Snow made driving hazardous and resulted in numerous traffic accidents. 2 persons died in traffic accidents. Thousands of motorists marooned for hours on blocked highways. Air traffic and shippingalso delayed. At Baltimore 8.4-inch snowfall on 3d-4th was second greatest so early in season and greatest since 9.9-inch fall on February 20, 1947. Greatest snowfall so early in season was 8.5 inches on November 25, 1938.
NEW JERSEY	3-4				2				Snow	Snowfall ranged from 1 or 2 inches along southeast coast to 13 inches in northern half of State. 1 death due to exertion, 1 to exposure.
IOWA Western portion	3-8					4	3	1	Snow	Snow-packed roads resulted in numerous automobile accidents.
NEW YORK New York City area, lower Hudson Valley, and coastal areas	4	Most of day			2	Many		1	Snow and wind	Snow of 4 to 12 inches fell from low pressure off Atlantic coast. Many traffic accidents and minor injuries from slippery traveling conditions. Some powerlines downed. Staten Island man died of heart attack after shoveling snow. North Lindenhurst resident died of heart attack after shoveling snow.
PENNSYLVANIA Entire State	4	Throughout day			12	7	4		Snow	Day-long storm ended with 3 to 11 inches of snow and drifts up to 6 feet deep with eastern sections hardest hit. All deaths result of heart attacks induced by overexertion in shoveling snow. Auto accidents resulted in several fatalities and injuries and accounted for all property damage. Storm moved eastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
MASSACHUSETTS Nantucket and Cape Cod areas	4-5	Night					3	1	Wind and snow	Winds, reaching 80 m.p.h., in gusts at Nantucket, caused minor damage there and on Cape Cod. 3 small boats sank and 6 others slightly damaged, 3 plate-glass windows broken at Hyannis, and some phone and powerwires snapped in area. Snow on Cape caused automobile accident at Santuit.
CALIFORNIA Southern coastal area	4-5						3		Hail, electrical, rain, and wind	Hailstones size of peas fell in Downey-Southgate area. Small earthslide occurred at Pacific Palisades and slide blocked Brea Canyon Road east of Pomona. Trees toppled in Los Angeles, Pasadena, Arcadia, Sierra Madre, and Ventura. Wind blew in plate-glass window at Inglewood automobile agency, and display window at Ventura appliance store. Powerlines blown down in scattered areas, and lightning struck utility pole in Walnut area. Slippery streets contributed to many traffic accidents. Freak windstorm in Huntington Park damaged 3 homes in 1-block area, blew down billboard damaging automobile, and uprooted tree. In 1-block area of Westchester, freak, described as "big black spot" arrived with roaring sound, twisting off large trees, pushing in window, sweeping shingles from roofs, and tearing boards from fence.
SOUTH DAKOTA Statewide	4-8, 17, 26, 29					9	4		Ice and snow	Accidents resulted from icy or snow-packed highways on 4th through 8th, 17th, 26th, and 29th. Most injuries not serious.
	6									Minor storm reported at Ft. Lewis, Wash.
UTAH Northern portion	6-7				1	Several	3	1	Snow	Blizzard conditions in portions of Uinta Basin and in several canyons along Wasatch Range. Roads closed in some localities and up to 16 inches of snow fell in mountains. Several persons injured in traffic accidents on icy roads. 1 man lost his life in accident in Weber County.
SOUTH DAKOTA Rapid City Pennington County	7	8-11 a.m.					2		Wind	Gusts to 70 m.p.h., toppled previously fire-weakened wall, breaking communications and powerlines. Other minor damage.
COLORADO Eastern portion	7	Forenoon					4		Wind and snow	Cold front caused sudden drop in temperature, snow, and high wind. Gusts of wind up to 95 m.p.h., recorded at Rocky Flats Atomic Plant near Boulder. At Greeley, winds estimated up to 70 m.p.h., blew down wall and partition to 86x80-foot garage under construction, also damaged power- and telephone lines and TV aerials. 2 light planes torn loose from moorings and overturned at Stapleton Airport in Denver. Unloaded panel delivery truck overturned on highway between Canon City and Colorado Springs by gust of wind. Many trees uprooted, signs blown down, powerlines, buildings, etc., damaged throughout eastern Colorado by winds generally 50 to 60 m.p.h. Storm moved southeastward.
WYOMING All of State	7	All day					4	1	Wind	Cold front passing through State, with strong winds causing small amounts of damage at many places including 4 aircraft at Cody, 2 aircraft at Douglas, overturned haystacks, damaged fences, many television antennas downed, sand-blasted cars, etc. Storm moved southeastward.
	7									Minor storm also reported at Pawnee, Okla.
KANSAS Industry (near), Dickinson County	9								Wind and fire	Fire which got out of control as result of high wind burned large hay barn and contents of 1,500 bales of alfalfa hay.
NEW YORK Capital District and middle Hudson Valley	9-10							1	Freezing rain	2-day freezing rain and freezing drizzle left ground, communications lines, and shrubbery covered with layer of ice. Numerous lines and trees downed and many minor accidents due to icy roads. Damages all small, but total (if available) would amount to several thousand dollars.
SOUTH DAKOTA Statewide	10	1-10 a.m.					3		Wind	Wind speeds of 40 to 50 m.p.h., destroyed Christmas decorations and other fragile structures. In Minnehaha County, trailer overturned while in motion. Near Yankton, communications lines downed.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

DECEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
OKLAHOMA	10	Day				2		3	Wind and dust	Widespread minor damage resulted from strong northerly winds following cold front across State. Winds estimated at 60 m.p.h. Injuries resulted from wind blowing over concrete form, breaking man's leg, and blowing down an elderly woman. Blowing dust noted in open fields in west. Storm moved south-southeastward.
NEBRASKA Eastern third	10	All day					3	5	Wind and cold	Property damage widespread, but light; trees and TV antennas blown down and plate glass broken. 1 car smashed by falling tree. Much unharvested corn and milo blown down, some lost, and remainder harvested with great difficulty. Storm moved south-southeastward.
MISSOURI Lexington Lafayette County	10	1 p.m.							Wind	Large steel tower carrying 69,000 volt transmission line across Missouri River blown down.
KANSAS Central and eastern counties	10	Afternoon					4		Wind	High wind in advance of cold front reached speed of 60 m.p.h., or higher in gusts, at many places. Damage included Christmas decorations, TV antennas, trees, and electrical and communications services. Wall of new church in Hillsboro blown down, part of wall of old College Auditorium in McPherson toppled over and north wall of new garage in Eldorado flattened. Minor damages reported from other points. Storm moved east-southeastward.
MISSOURI Columbia, Boone County	10	7:30 p.m.							Wind	Fastest mile of wind, 56 m.p.h., from northwest at 7:30 p.m. This was 12 m.p.h. higher than previous record for December.
MAINE, MASSACHUSETTS, and NEW HAMPSHIRE	10				1	4	3	1	Wind, snow, and glaze	Northeast coastal storm caused minor wind damage in Maine and caused hazardous driving conditions in 3 states. 1 person killed and 2 injured at Chelmsford, Mass., and 2 injured in Maine, by automobile accidents attributed to storm.
	10									Minor storms also reported in western Iowa and at Burlington Junction, Mo.
PENNSYLVANIA Entire State	10-11	Throughout days			2	15	3		Snow	1 to 4 inches of snow piled up during 2-day period. Automobile accidents accounted for 2 deaths, numerous injuries and property damage. Storm moved eastward.
MICHIGAN Allegan, Cass, Berrien, and Van Buren Counties	10-11								Snow	Freak snowstorm, with snowfall ranging from 16 to 20 inches confined to small area in southwestern section of State.
NEW YORK State	10-12				4	Numerous		1	Snow	Snowfall of 3 to 9 inches in many places brought usual traffic accidents. Numerous injuries and 4 deaths resulted from accidents. 1 death near Silver Creek, another near Salamanca, and 2 at New Lebanon.
FLORIDA Limona, Hillsborough County	11	11 a.m.			0	0			Tornado	Small tornado unroofed several chicken houses and caused other minor damage.
VIRGINIA Central and northern mountain counties	11	Morning			13				Snow and cold	1 to 9 inches of snowfall, heaviest in Rockingham County. Storm more severe since it was accompanied by cold wave which broke low temperature records for date by morning of 12th in a few locations. Icy roads and cold weather blamed for 13 deaths, 10 in home fires, 2 in traffic crashes, and 1 from exposure.
FLORIDA Naples, Collier County	11	2:30 p.m.			0	0			Funnels aloft	Several funnel clouds sighted; 1 may have dipped near ground as 1 building unroofed.
FLORIDA West Palm Beach, Palm Beach County	11	3:55 p.m.			0	0			Funnels aloft	Several funnel clouds aloft sighted near Palm Beach International Airport.
FLORIDA Captiva, Lee County	11	Afternoon			0	0			Waterspout	
MISSOURI Louisiana, Pike County	11-12	11 a.m. 11th-1 a.m. 12th							Wind	Strong winds and high waves along water front sank small boats and damaged docks.
CONNECTICUT Western and central portions	11-12	Early p.m 11th - early a.m 12th			2	4			Snow	5 to 7 inches of snow to inland western and central counties and up to 3 inches in coastal areas resulted in usual skidding accidents, traffic tieups, and greatly delayed travel on

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

DECEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
CONNECTICUT (Cont'd.)										highways. Fatalities due to overexertion, shoveling snow, and injuries in skidding accidents on highways.
NEW JERSEY	11-12								Snow	Snowfall from 1 inch along coast to 8 or 9 inches in northwestern counties.
MICHIGAN Marcellus, Cass County	12	Early morning					5	1	Wind	Housetrailer factory collapsed when strong winds blew in 1 wall.
NORTH CAROLINA	12	Early morning			1		4		Cold	Man killed by exposure to cold and other contributing causes. Coldest weather in 10 years over much of State, causing widespread occurrence of minor damage due to water pipes bursting, radiators freezing, etc.
SOUTH CAROLINA	12-13								Cold wave	Severe cold wave caused some freezing to water pipes, perishables, and even some hardy shrubs. Small grains sustained some undetermined damage.
IOWA Waterloo, Black Hawk County	14	3:30 p.m.				1			Ice	Icy walks resulted in broken leg.
CALIFORNIA Entire State	15-16				7		3		Rain, snow, and wind	Heavy rains in north flooded many streets in Chico, and caused minor flooding in San Francisco Bay area. Private airplane with 7 persons aboard crashed in heavy snow storm in Yuba River Canyon while in flight from Reno to San Francisco. All aboard killed. In south, torrential rains flooded many areas of San Fernando Valley. Subdivision in Canoga Park inundated, damaging several homes. Home damaged by mud slide in Burbank. Some stores in Valley flooded, damaging merchandise. Lowland sections of Glendale, West Los Angeles, Culver City, Inglewood, and San Bernardino flooded. 3 automobiles caught by flood waters in dip near Saugus washed downstream. Section of roadway collapsed at Redondo Beach, causing parked car to plunge 20 feet down cliff. Rainfall totaled 10.22 inches for storm at Lake Arrowhead, and mud and rock slides closed many mountain roads. Locally strong winds blew down few trees and branches, with scattered power failures over area.
IDAHO Canyon and Ada Counties	16	Evening							Wind	Powerlines damaged in vicinity of Parma. At Star, trees uprooted, several roofs damaged, and large signs blown down. Power off 3-1/2 hours.
OREGON Northwestern portion	16-17	Late afternoon 16th - early morning 17th	125-150	*80			5	2	Wind	High winds reaching gusts of 60 m.p.h., at Corvallis, 58 m.p.h., at Salem, 55 m.p.h., at Eugene, and 52 m.p.h., at Portland caused widespread power and to lesser extent telephone service outages over northwest. Large number of trees felled, some across buildings, power- and telephone lines, highways, and, in a few cases, parked cars. Storm moved eastward.
WASHINGTON Entire State	16-17						4		Wind and rain	High wind and rain over entire State. Several residences damaged by falling trees. Power and communication outages occurred in various localities of State.
	17									Minor storm reported at Ozark, Mo.
CALIFORNIA Northern and central portions	17-18						3		Wind and rain	Unusually vigorous cold front moving across northern and central portions caused brief, but torrential rains, and violent gusts of wind in some areas. Minor damage from gusty winds reported in Sacramento Valley. At Vallejo, winds broke branches from trees, blew down or bent television antennas, and ripped shingles from roofs. Flash flood poured over lawns in 1 section of town and flooded some basements. At San Francisco Airport, 0.62 inch of rain in 1 hour. Overflowing storm drain flooded motel in Millbrae, and mud slides damaged homes and lawns in Belmont. At Seacliff, in Santa Cruz County, freak gust of wind tore roof from home, carrying it intact for approximately 400 feet, broke several windows, and knocked down trees and utility lines. In Watsonville, garage demolished by wind, and 2 trees blown down.
MISSOURI Hannibal, Marion County	18	12:20-1:40 p.m.							Wind, hail, and electrical	Wind at Hannibal estimated at 55 to 60 m.p.h. Much thunder, lightning, and hail. Telephone- and powerlines downed. Storm moved northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

DECEMBER 1957

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons: Killed	Number of persons: Injured	Estimated damage by categories †: Property (exclusive of crops)	Estimated damage by categories †: Crops	Character of storm	Remarks
MISSOURI Truxton, Lincoln County	18	12:30 p.m.	1/4	100	0	1	4		Tornado	Tornado moved northeastward.
MISSOURI Farmington Francois County	18	12:58-3:24p.m.		100	0	0			Funnel aloft and hail	Ground covered by hail 1/2 to 3/4" inch in diameter. Funnel seen by CAA observer 2 to 3 miles east of Farmington. Storm moved northeastward.
MISSOURI Sulphur Springs, Jefferson County	18	1:04 p.m.			0	0			Tornado (suspected) and hail	Funnel cloud reported. Hail 1 inch in diameter.
MISSOURI Fredericktown (15 miles north of), St. Francois County	18	2 p.m.			0	2	4		Tornado	Demolished buildings. Storm moved toward Libertyville. Possibly same storm that later hit McBride.
ILLINOIS Randolph and Perry Counties	18	2:30 p.m.	20		0		4		Tornado	Reported north of Chester at 2:30 p.m. Hit just north of Steeleville at 2:45 p.m., and moved east-northeastward to Jamestown and Conant. 10 or more homesteads damaged. May have been continuation of tornado which hit Farmington, Mo., at 1:50 p.m. This is first of 20 different tornado occurrences on this date in Illinois for worst late-season tornado situation ever recorded in State.
ILLINOIS Randolph and Perry Counties	18	3 p.m.	18		0	0	5		Tornado	Near Chester at 3 p.m. Continued east-northeastward to Denmark and may have been observed over Pinckneyville at 3:35 p.m. Brick school wrecked and 2 dozen or more homes demolished at Willisville.
MISSOURI Malden (35 miles northeast of) Mississippi County	18	3 p.m.			0	0			Funnel aloft	
ILLINOIS Wood River, Madison County	18	3:20 p.m.	1		0	1	4		Tornado	Continuation of tornado of Florrissant, Mo. 9 buildings damaged on south side of Wood River. Tornado moved east-northeastward.
MISSOURI McBride and Altenburg, Perry County	18	3-3:20 p.m.			0	0	5		Tornado	School lifted off foundation. No children injured. Apparently 2 funnel clouds involved. 15 to 20 buildings damaged.
ILLINOIS Mason City Mason County	18	3:35 p.m.	Short	Narrow	0	1	4		Tornado	Tornado moved northeastward. Damage to 3 or 4 buildings not heavy. Funnel cloud reported. May have been same formation that produced tornado at Truxton, Mo., 2-1/2 hours earlier. Truxton is about 110 miles away from Mason City.
ILLINOIS Perry County	18	3:35 p.m.	2-3		0	1	5		Tornado	Occurred at junction of Highways 150 and 154. 6 houses heavily damaged at Cutler "Y". Car driving on highway thrown off road and demolished. Same tornado may have been observed north of Pinckneyville about 3:55 p.m. Tornado moved east-northeastward.
ILLINOIS Boyd, Jefferson County	18	3:45 p.m.	5		0	2	4		Tornado	8 buildings heavily damaged at Boyd and near Kell. Tornado moved east-northeastward.
ILLINOIS Mt. Vernon area, Jefferson County	18	3:55-4:10 p.m.	18	100-250	1	45	6		Tornado	First observed about 10 miles west-southwest of Mt. Vernon. Patrol cars followed movement and reports broadcast on local radio station. Destruction complete among prefabricated ranch homes on far southwest side. Path continued across near north side of town, with less severe damage to older residences in wooded and rolling land. Path continued intermittently some 8 miles to east-northeast of town.
ILLINOIS Vandalia (southwest and south of), Fayette County	18	4 p.m.			0	0	1	1	Funnels aloft	1 or more funnels aloft reported by aircraft.
ILLINOIS Ava, Jackson County	18	4 p.m.	5		0	0	4		Tornado	Damage to 3 or 4 homesteads. May have been same formation reported at McBride, Mo., about 3:20 p.m. Tornado moved east-northeastward.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
ILLINOIS Rockwood (near), Randolph County	18	4:15 p.m.			0	0	4		Tornado	Freight cars overturned and damage to buildings.
ILLINOIS Mt. Vernon, Jefferson County	18	4:30 p.m.	12	200	0	0	4		Tornado	Hit far north side of Mt. Vernon at 4:45 p.m., with light damage to residences. Path began 10 miles to west-southwest. 6 farmsteads damaged. Tornado moved east-northeastward.
ILLINOIS Gorham-Murphysboro, Jackson and Williamson Counties	18	4:35 p.m.	30	200-300	11	200	6		Tornado	About 40 houses destroyed in Gorham and 40 in Murphysboro. Man killed at Sand Ridge and 10 killed at Murphysboro. Funnel followed river bottom on southeast side, destroying older buildings. Gas, electric, and water utilities knocked out. Lack of water hampered fire fighting. City without electric power for 60 hours. Intermittent path continued east-northeastward, with damage near DeSoto, Hurst, Bush, and at Plumfield. Tornado reported at Plumfield about 5:05 p.m. This tornado may have traveled at 60 m.p.h., but there is some doubt as to accuracy of time fixes.
ILLINOIS Perry County	18	4:35 p.m.	5	200	1	0	5		Tornado	Occurred at junction of highways 51 and 154. Small crossroads settlement at Sunfield "Y" wiped out. Very heavy destruction in small area. Several survivors took cover in buildings. Man remaining in open killed. Tornado moved east-northeastward.
MISSOURI Cape Girardeau County	18	4:45-4:55 p.m.	15	750	0	0	5		Tornado	Moved northeastward from Millersville to Oak Ridge to Highway 61.
ILLINOIS Orchardville-Clay City, Wayne and Clay Counties	18	5 p.m.	20	100-200	0	1	5		Tornado	Along 20-mile path from near Orchardville to south of Clay City some 20 farmsteads damaged or wrecked. Path may have curved from east-northeast toward northeast during movement. Damage heaviest near start of path, with path more intermittent later. Separate tornado may have occurred in same area 1/2-hour earlier.
ILLINOIS Carbondale, Jackson County	18	5:25 p.m.	1-2		0	5	4		Tornado	Tornado struck trailer camp 1 or 2 miles south of Carbondale, destroying 15 trailer homes and damaging 3 houses.
ILLINOIS Boos-Ste. Marie, Jasper County	18	5:25 p.m.	6		0		4		Tornado	Damage to 3 or 4 farmsteads in small area between Boos and Ste. Marie. Tornado moved northeastward.
ILLINOIS Dahlgren, Hamilton County	18	5:35 p.m.	2-3	150	0	3	5		Tornado	Heavy damage to several buildings on southeast side of village. May have been same tornado formation that struck Sunfield "Y" 1 hour earlier (32 miles to west-southwest). Tornado moved east-northeastward.
MISSOURI Chaffee, Scott County	18	5:35 p.m.			3	1	6		Tornado	Storm hit in downtown Chaffee, damaging many business houses and shoe factory.
INDIANA Rockville (20 miles east of), Parke County	18	5:45 p.m.			0	0	1	1	Funnel aloft	Air Force Radar Station near Rockville observed on radar what appeared to be funnel cloud. No damage or other visual contact reported. Funnel moved northeastward.
ILLINOIS White and Edwards Counties	18	6 p.m.	20		0		5		Tornado	Fairly heavy damage from southwest of Springerton to northwest of Grayville with some 20 farmsteads affected. Tornado moved east-northeastward.
ILLINOIS Forman, Johnson County	18	6 p.m.	Short		0		4		Tornado	Church destroyed and damage to school and 2 farms. Unconfirmed report of 2 successive tornadoes in small area. May have been same formation which struck Chaffee, Mo., at 5:15 p.m.; Chaffee is 40 miles to west-southwest.
ILLINOIS Sidell, Vermilion County	18	6:40 p.m.	4	60	0	0	4		Tornado	Tornado moved northeastward just to northwest of village. Not a strong tornado but there were reports of "roaring" sound.
KENTUCKY Owensboro (8 miles west of), Daviess County	18	8:05 p.m.			0	0			Funnel aloft	Pilot reported funnel cloud 1,000 feet above surface, moving south-southeastward.
WASHINGTON Eastern portion and lower Yakima Valley	18						4		Wind and rain	Wind speeds ranging from to 50 to 70 m.p.h., reported in Kennewick and Pasco areas. A few residences damaged by falling trees. Numerous power outages occurred. Christmas decorations damaged.

See footnotes at end of table.

	18									Minor storms also reported at Belleville, Ill.; at Clinton and Keokuk, Iowa; at Columbia and Florissant and near Advance, Mo.; and in northern Utah.
OREGON Western portion	18-22		400	*125			4	2	Rain	Heavy rains on 18th to 21st, preceded by several days of intermittent rain earlier in December, resulted in flooding of lowlands along some western tributary streams; local flooding in poorly drained sections in some towns where heavy rainfall exceeded capacity of sewer systems and a number of slides closed roads mostly in coastal range. Damage mostly consisted of erosion to flooded farmland, washing out of a few private bridges and sections of dykes, and highway damage from slides. Timely Bureau warning permitted all necessary evacuation of livestock, persons, and movable property. Storm moved eastward.
TENNESSEE Dotsonville Community, Montgomery County	19	10:30 a.m.				1		1	Electrical	Lightning tore light meter from house, knocked kitchen cabinet several feet, smashed outside telephone box, ripped down gutters, ruined refrigerator, and damaged roof. Woman received slight shock.
ARKANSAS Waldo to Stephens, Columbia and Ouachita Counties	19	12:44 p.m.	15		2	9	4	1	Tornado	Principal damage in Cotton Belt community, between Waldo and McNeil, Columbia County. 5 homes destroyed and 5 damaged. 3 other buildings destroyed, 2 persons killed and 9 injured. Tornado moved northeastward.
TEXAS Dallas, Tarrant County	19	Afternoon					4	1	Wind and dust	Strong, gusty winds (fastest mile 47 with gusts to 50 m.p.h.) blew down marquee roof onto 3 cars. Accompanying dust cut visibility at Dallas to 1/2-mile between 2:40 and 4:45 p.m. Storm moved eastward.
ARKANSAS Sherrill and Tucker Prison Farm, Jefferson County	19	3:40 p.m.	5	100	0	0	4	1	Tornado	Damage to 2 farms near Sherrill and on Tucker State Prison Farm. Tornado moved northeastward.
MISSOURI Golden City area, Dade County	19	4:10-4:15 p.m.	15	100	0	0	4		Tornado	Funnel first touched ground 2-1/2 miles south and 1 mile east of Golden City, damaging several farm buildings. Tornado then moved northeastward, lifting and dipping back to ground several times. Buildings on 5 farms damaged. Witnesses report seeing several funnels.
ILLINOIS Waltonville Jefferson County	19	5:50 p.m.	1	65	0	0	4		Tornado	Storm moved northeastward through southwest side of village. Heavy damage to 1 farmstead. Other buildings had lighter damage. Wind damage at Elkville and Royalton at about the same time may have been associated with tornadoes.
ILLINOIS Pankeyville Saline County	19	9 p.m.	1/2	100	0	0	4		Tornado	Storm moved northeastward, causing damage to barn and other buildings.
TENNESSEE Humboldt, Gibson County	19	9:15 p.m.			0	0		1	Tornado (suspected)	Warehouse demolished, most of roof from hotel and part of City Hall roof blown off. Cotton gin severely damaged, building moved and twisted, several houses and business establishments damaged by flying debris, and many powerlines, tree limbs, and TV antennas blown down. Many residents reported noise similar to that of fast train. $15,000 damage done to hotel alone.
TENNESSEE Milan, Gibson County	19	9:20 p.m.			0	2	4	1	Tornado (suspected)	Concrete-block garage destroyed, roof of which severely damaged nearby brick house; several other houses suffered roof, window, or antenna damage. 2 persons received minor injuries from flying debris. (Possibly continuation of Humboldt storm).
ALABAMA Littleville, Colbert County	19	11:15 p.m.	Short	Narrow	0	7	4	1	Tornado	
TENNESSEE Sitka Community, Gibson County	19	P.m.			0	0		1	Tornado (suspected)	4 tenant farmhouses wrecked. (Possibly continuation of Humboldt-Milan storm).
TENNESSEE Chester County	19	P.m.						1	Wind	Many roofs ripped off, trees blown down, powerlines torn down, and several outbuildings damaged.
TENNESSEE Henderson County	19	P.m.						1	Wind and electrical	Roof blown from Post Office at Darden. Elsewhere power transmission pole snapped and transformers damaged by lightning.

See footnotes at end of table.

STORM DATA AND UNUSUAL WEATHER PHENOMENA

DECEMBER 1957

Place	Date	Time	Length of path miles	Width of path yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
TENNESSEE Jackson (near), Madison County	19	P.m.						1	Wind	2 farm buildings destroyed; considerable damage to 2 houses and a barn.
ALABAMA Winfield (4 miles south of), Fayette County	19	Late evening	Short	Narrow	0	0	3	1	Tornado	1 home and outbuildings destroyed.
	19									Minor storms also reported at Batesville, Ark., near Brookhaven, Miss.; at Aurora, Knobnoster, and Sweet Springs, Mo.; at Altus and Gage and near Erick, Okla.; and at Somerville, Tenn.
IOWA Entire State	19-31				1	12	4	1	Snow and ice	Numerous automobile accidents; pedestrians slipped and fell; 1 farmer killed when shotgun discharged as he slipped and fell on ice.
ALABAMA Clanton, Chilton County	20	2:30 a.m.	Short	Narrow	0	0	5	1	Tornado	Cotton mill and 35 homes heavily damaged. Tornado moved northeastward.
ALABAMA Castleberry (8 miles east of), Conecuh County	20	3 a.m.	3/4	35	0	0	3	1	Tornado	Hit twice with blows about 1/2 mile apart. 2 houses and barn destroyed. Tornado moved northeastward.
PENNSYLVANIA Eastern portion	20	Day - night				3	5		Rain	Hardest hit was Pocono Mountain area where 4 to 5 inches of rain fell in 15 hours. Most damage caused by flooding. Sections of roads washed away as well as temporary bridge and dam under construction. 3 persons injured in automobile accident on rain-swept highway. Storm moved northeastward.
NEW YORK Penfield, Monroe County	20	8-9 p.m.					4	1	Wind	Wind associated with squall line tore roof off henhouse and blew parts of it into house. Damage to henhouse estimated at $20,000 and $3 to 4 thousand to home.
NEW JERSEY Central and northern portions	20						4		Wind	Damage to roofs, trees, and utility lines in several non-adjacent communities.
NORTH CAROLINA East of mountains	20						4		Wind	Strong winds in connection with squall line and cold front caused widespread minor damage. 1 aircraft turned over, tree blown down on automobile, numerous signs blown down, and minor structural damage.
	20									Minor storm also reported in Decatur area, Ala.
CONNECTICUT Entire State	20-21	Late p.m. 20th-early a.m. 21st			4	2			Rain	Restricted visibility and slippery highways caused by heavy downpours blamed for 4 highway deaths in Bridgeport and New London areas. Precipitation of 1.50 to 2.50 inches and heaviest early on 21st was accompanied by record warm temperatures.
NEW YORK Lake of the Isles (In St. Lawrence river just east of Alexandria Bay)	20 evening - 21 a.m.				0	0		1	Wind or tornado (suspected)	Strong windstorm threw boats and trees around. Area isolated and no one present at time. Later in weekend damage discovered by a person going in to check on some boats. Residents reported "roaring wind" Friday evening, but no damage in other neighboring sections. Due to lateness of report, lack of qualified meteorologists in area, and isolated character of area, no checking done, but there is evidence of tornadic activity.
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	20-21	Night					4	1	Rain and wind	Rain caused road washouts and water damage to property, especially in Springfield-Holyoke-Chicopee, Mass., where phone service cut off also by flooded cables. Minor tree and limb damage by wind through entire section with some power outages resulting. High voltage line at St. Johnsbury, Vt., became crossed with home circuits with $5,000 loss to appliances.
NEW JERSEY Central and northern portions	20-21						5		Rain	Damage from flooding.
NEW YORK Long Beach Nassau County	21	12:01 a.m.					5	1	Wind	Wind ripped off roof section of 3-family apartment house and threw it into unoccupied bungalow
WASHINGTON Northwestern portion	22						4		Wind and rain	Numerous power and communication outages occurred in northern Puget Sound area. 1 pleasure boat sank near Anacortes. Several other small

STORM DATA AND UNUSUAL WEATHER PHENOMENA

Place	Date	Time	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Character of storm	Remarks
					Killed	Injured	Property (exclusive of crops)	Crops		
WASHINGTON (Cont'd.)										boats damaged after breaking loose from their mooring and were pounded on rocks by high wind and waves.
FLORIDA Broward, Palm Beach, Hendry, and Glades Counties	23-24								Rains	2-day rainfall totals in 4-county area ranged from 3 to 8 inches generally with scattered amounts as high as 11 inches caused considerable local flooding and crop damage in truck crop-producing areas. Flooding rains, coming about 2 weeks after disasterous freeze of December 12-13, were especially disheartening to agriculture as they severely damaged portion of crops that survived freeze as well as many fields that had been planted after freeze. Total damages not estimated, but thought to have been considerable.
FLORIDA Tarpon Springs, Pinellas County	25	8 a.m.				1			Wind or tornado (suspected)	Several house trailers overturned in trailer park, but overall damages minor. Storm moved northeastward.
OREGON Western and northern portions	25	Late afternoon-evening					5	2	Wind	High winds, which reached 69 m.p.h., in gusts at Pendleton experienced along full length of western Oregon and along northern border inland to Blue Mountains, blew down or broke large branches off a great number of trees which caused widespread service interruptions and considerable damage to power installations and to lesser extent to telephone lines. Thousands of power service customers without service for periods ranging from a few minutes to several hours. Severe damage to roofs of homes and other buildings, and breaking of plate-glass store windows reported from several widely scattered areas. Total of 31 ewes killed when sheds in which they were sheltered collapsed under force of wind. Farm machinery and other property also damaged as several outbuildings in storm areas gave way. Storm moved eastward.
WASHINGTON Entire State	25						5		Wind and rain	Wind speeds ranging from 50 to 70 m.p.h., caused large number of power and communication outages. Windows broken in few localities and automobiles and residences damaged by falling trees. Heavy rainfall in some localities of western Washington. Highway traffic slowed or delayed. Rail traffic delayed near Tacoma by mudslide. Television service interrupted in southeastern Washington when micro-wave tower damaged by high wind.
CONNECTICUT and RHODE ISLAND	26	A.m. - late p.m.			1	6	4	1	Rain and wind	Intense storm with winds to 60 m.p.h., and precipitation of 1 to 2 inches caused moderate but widespread and varied damage throughout both States. Extensive power and telephone disruption as numerous trees blown on wires and, in one instance, blown onto automobile, injuring 2 persons. Over a dozen large store windows smashed in several cities, with damage in one instance set at $2,000. Small aircraft blown over at Hartford, church roof damaged at Meriden, and Christmas decorations downed by wind in many communities. Tides 2 to 3 feet above normal at storm height, with flooding of shoreline roads. Large rivers inland near bankfull and minor flooding occurred on small streams. Storm had beneficial aspect in that precipitation greatly replenished long deficient water supplies in reservoirs of both States.
MAINE, MASSACHUSETTS, NEW HAMPSHIRE, and VERMONT	26	Evening			2	3	5	1	Wind and rain	Winds damaged outdoor Christmas decorations, felled trees, limbs, and wires, broke plate-glass windows, toppled a few chimneys and destroyed some buildings. Greatest loss $40,000 at Belgrade, Maine when powerwires blew onto farmstead, destroying it by fire. Home at Lewiston, Maine, damaged by fallen tree. 20x175 foot wall toppled at Everett, Mass. Barn blown apart at Bellingham, and large shed at Adams, Mass. Man electrocuted at West Newbury, Mass., by fallen wire. 3 construction workers injured at South Braintree by girder blown down. Heavy rains caused some washouts in central Massachusetts and flooded cellars and buildings in low areas of several Massachusetts communities. Man struck and killed by automobile in Portland, Maine, during blinding rain. Loss estimates include $60,000 for Maine, $50,000 for Massachusetts, $3,000 for New Hampshire, and $1,000 for Vermont.

See footnotes at end of table.

	26									Minor storms also reported in northern Utah and Wyoming.
NEW JERSEY Central and northern portions	26-27						4		Rain	Damage from flooding.
	27									Minor storm reported at Pauls Valley, Okla.
DELAYED REPORT										
November 1957										
KANSAS Lyon County	17	8 p.m.							Wind	Gusts of wind up to 54 m.p.h., recorded at Emporia CAA office. Streets littered with fallen trees and branches. Numerous interruptions of electrical and communication lines resulted. Storm moved southeastward.

* Miles instead of yards.

° Includes crop damage.

C Crop damage.

† Storm damages are placed in categories varying from 1 to 9 as follows:

1	Less than $50
2	$50 to $500
3	$500 to $5,000
4	$5,000 to $50,000
5	$50,000 to $500,000
6	$500,000 to $5,000,000
7	$5,000,000 to $50,000,000
8	$50,000,000 to $500,000,000
9	$500,000,000 to $5,000,000,000.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

DECEMBER 1957

The most significant flooding during the month occurred in the Wabash and White River Basins in Indiana. Streams in this area rose to their highest levels in 6 or 7 years. Actual damage was small considering the magnitude of the flood, as most crops are normally gathered by December. Flooding elsewhere was mostly light.

ST. LAWRENCE DRAINAGE

There were two periods of flooding in the Lake Erie Drainage during December. The first rise was due to 1.5 inches of rainfall on the 6th and 7th and the second to 2 inches of rain during the latter part of the second decade of the month. During the first rise, the only flooding reported was on the St. Marys River at Decatur, Ind. The second rise was the more significant with flooding on the St. Marys, St. Joseph, and Maumee Rivers between the 17th and 28th.

ATLANTIC SLOPE DRAINAGE

Moderate to heavy rain (1/2 to 1-1/2-inches) on the 20th and 21st over the State of Maine caused a general rise in all streams. Abnormally high temperatures which accompanied and followed these rains added considerable water from the snowmelt. There was some flooding of the flood plains, but there was very little damage. On the Androscoggin River the peak flow was about 40,000 c.f.s. on the 22d. There was considerable ice jamming in the vicinity of Rumford, Maine, which caused considerable anxiety as water backed over low points. Little, if any, losses resulted other than inconvenience due to inaccessible roads. The Saco River peaked at about 12,000 c.f.s. at Buxton and the Penobscot at about 41,000 c.f.s. at Skowhegan. There were no reports of damage along these streams. On the Kennebec River near Waterville, a paper mill was closed down temporarily. The most severe ice jams occurred on the St. John River, which were dynamited after causing some flooded cellars in the vicinity of Fort Kent. The greatest damage due to ice and high water was confined to the Canadian side along the Madawaska River (St. John tributary).

The flooding on streams in New Hampshire was due to rainfall on the 20th and 21st, which ranged from 3 inches in the headwaters of the Pemigewasset and Baker Rivers to 1 inch in the lower Merrimack. There was considerable runoff from snowmelt, which together with the rain combined to make the peak stages of the Pemigewasset the highest since March 1953 and the second highest since the major flood of September 1938. Flooding was confined to the Pemigewasset area, and the principal damage was reported to highways and railroad bed. Practically all the snow in the mountains disappeared as temperatures rose to the middle and upper fifties. There was no flooding in the Merrimack Basin below Plymouth, N. H., as rainfall and snow cover was light. Also, Franklin Falls Reservoir went into regulation to hold flows below the overflow level of the main stem from Franklin, N. H., to Haverhill, Mass. Runoff from the lower tributaries was not excessive.

There were two rises on streams in New Jersey, with flooding reported on the Raritan, Millstone, and Ramapo Rivers. The first rise was due to heavy rainfall on the 20th-21st which ranged from 4 to over 5 inches over the Ramapo Valley and 2 to 3 inches over the Raritan Basin. The second rise was due to general rains on the 26th and 27th which averaged from 1.5 inches in central New Jersey to a little over 2 inches in the north. Underpasses and roads were flooded in the Blackwells Mills-Manville-Bound Brook area, and some evacuation in the upper reaches of the Raritan was necessary. About 40 families were evacuated in the vicinity of Oakland, N. J. No heavy damage was reported.

Heavy rain over 48 hours produced minor flooding of small streams in eastern New York on the 20th and 21st. Storm totals ranged from 0.31 inch at Utica, N. Y., to 5.82 inches at Tannersville, N. Y. Runoff was low as the weather previous to this storm had been very dry. Rondout Creek at Rosendale, N. Y., was out of its banks for about 6 hours and crested 2.2 feet above flood stage on the 21st.

Heavy rains totaling 2 to 4 inches fell in the Delaware River Basin during the day and early evening of the 20th. The Lackawaxen River at Hawley, Pa., exceeded bankfull stage on the 21st and crested about 1.5 feet above flood stage.

There was general flooding along the Lehigh River from Lehighton to Bethlehem, Pa. The rainfall averaged about 4 inches over the Basin. Very little damage was reported. Minor flooding occurred on Perkiomen Creek, Neshaminy Creek, and smaller tributaries of the upper Delaware above Port Jervis, N. Y. Several roads were inundated in the Neshaminy Creek area for a short period on the night of the 20th to 21st. Except for some overflow in the upper Delaware River branches above Port Jervis, N. Y., there was no flooding along the Delaware and no damage resulted except for minor inconveniences.

There were two periods of minor flooding in the Monocacy Basin in Maryland during December. The first was due to heavy rain (up to 2 inches) on the 20th and 21st and the second to rain averaging 1.5 inches on the 25th and 26th. No damage was reported.

A series of moderate general rains during December caused flooding along the Tar, Cape Fear, and Neuse Rivers in North Carolina. Stages on the Roanoke River below John H. Kerr Dam were controlled by the dam and were maintained at rather high levels due to the moderately rainy December weather. Stages at Scotland Neck and Weldon, N. C., were maintained at slightly below flood stage except for occasional very brief rises to less than a foot above flood. Downstream at Williamston, N. C., the river remained from 0.2 to 1.2 feet above flood stage throughout December. These stages are not destructive, but they do stop logging operations near and below Williamston. Some pastures and hunting preserves in the Weldon-Scotland Neck areas were flooded.

The Pee Dee River crested at Peedee, S. C., at a stage of 24.6 feet on the 1st and 2d, 5.6 feet above flood stage. This flood was prolonged by moderate rains on the 8th and 9th, which kept the river out of its banks until the 15th. This was the highest crest at this point since January 1954. The Lumber River which was out of its banks at Lumberton, N. C., in the beginning of the month was back within its banks on the 7th. No damage was reported from the flooding along the Pee Dee River. Damage along the Lumber River was minor.

Streams and reservoirs in the Santee River Basin in South Carolina were at relatively high levels at the beginning of the month due to flood conditions experienced during November. One to 2 inches of rain on the 20th and 21st caused slight rises on the Broad and Saluda with Bankfull stage reached at Pelzer, S. C., on the 25th. No damage was reported from the flooding.

The Savannah, Ogeechee, and Ocmulgee Rivers in Georgia were above flood stage and rising in the beginning of the month from the frequent heavy rains during November. The moderate to heavy rain on several occasions during December kept the Savannah River near the extreme lower portion in flood most of December. No damages were reported.

EAST GULF OF MEXICO DRAINAGE

The Apalachicola River at Blountstown, Fla., was in flood from November 22 to December 4 and was due to heavy rain during the latter part of November. No damages were reported.

The lower Tombigbee River was above flood stage at the beginning of the month due to heavy rains in late November. Flooding continued in this reach up to the 14th at Whitfield, Ala. Heavy rains (1.5 inches) on the 20th caused sharp rises. with some flooding in the headwaters. Near bankfull stage occurred at most stations on the lower Tombigbee, with a slight overflow at Whitfield, Ala. No damage was reported.

The flooding on the Pearl River, which began around the middle of November, continued until the middle of December. A resume of the flooding is given in the November report.

MISSISSIPPI SYSTEM

Upper Mississippi Basin.--Floods developed in the Meramec River in Missouri between the 18th and 20th and in portions of the Kaskaskia and Sangamon Rivers in Illinois from the 22d to the 27th. These floods were due to heavy rains during the period from the 16th to the 21st. The greatest amounts were reported over the south-central and southeastern portions of Missouri where several stations reported 3 to 5 inches of precipitation during the 24 hours ending at 7 a.m. on the 17th. Flooding was generally limited to lowlands not in use. Flood damage was minor.

The monthly mean stage of the Mississippi River at St. Paul, Minn., for December was 3.0 feet, 0.1 foot above normal. At LaCrosse, Wis., the monthly mean stage was 5.2 feet, 0.7 foot above normal.

A comparison of snow depths on December 31 with that of other years is given in the following table:

Comparative Snow Depths (Inches)

Station	1957	1956	1955	1954
(Minnesota)				
Bimidji	T	6	17	1
International Falls	2	6	14	4
Duluth	6	11	26	4
Fargo, N. Dak.	1	T	T	1
Alexandria	2	2	10	1
New Ulm	T	T	5	1
Minneapolis	T	0	11	2
Rochester	1	T	7	1
Park Falls, Wisc.	7	11	23	11

Missouri Basin.--Streams in the Missouri Basin remained within banks throughout the month, except for minor flooding on Gasconade River in Missouri. Ice formed on the smaller tributaries and by the end of the month the ice on the James in South Dakota and the Big Sioux River in Iowa was 3 to 4 inches thick. There was considerable floating ice and shore ice in the Missouri in the reach above Sioux City, Iowa.

Ohio Basin.--Heavy precipitation over the Scioto Drainage in Ohio from the 6th to the 8th, the 17th to the 20th, and from the 25th to the 26th caused minor flooding along the Scioto and Paint Creek on three different occasions. Residential and industrial property was not affected.

The minor flooding on the Rough and the middle and lower reaches of the Green River in Kentucky between the 8th and 14th was due to rains averaging 1.5 inches on the 6th and 7th. Additional heavy rains (2.5 to 3 inches) from the 17th to the 20th caused another rise with minor flooding on the Green. There was no additional damage reported along the Green from that of the last month.

December was one of the wettest, if not the wettest of record for much of the Wabash and White River Basins in Indiana. At Indianapolis, near the center of these basins, the precipitation for the month was the greatest for any December since records began in 1871. As a result of these rains the streams rose to the highest stages in 6 or 7 years at several points. At Covington and Vincennes, the Wabash crests were the highest since 1951; at Petersburg and Hazleton on the White, the crests were the highest since the great flood of 1950. Large areas of bottom land were inundated and many state and secondary roads were closed. One or two railroads were threatened with stoppages and were possibly forced to reroute trains around critical areas. Actual damage was small, considering the magnitude of the flood, as most crops are normally gathered by December. However, considerable corn remained to be picked in some areas due to the inclement weather in October and November.

Moderate to locally heavy rain during the 24 hours ending on the morning of the 20th over the Tennessee River Basin, combined with the annual drawdown of the tributary reservoirs, resulted in minor flooding below the dams at Gilbertsville, Ky., and Whitesburg, Ala. This storm also caused slight flooding on South Chickamauga Creek near Chattanooga, Tenn. No damages were reported.

Minor flooding occurred along the main stem of the Ohio River from Mt. Vernon, Ind., to Mound City, Ill., beginning at Fords Ferry, Ky., on the 23d.

White Basin.--Flooding in the White Basin during the month was confined to the Black River at Black Rock, Ark., and the lower White at Clarendon, Ark., and below. The Black River was in flood from November 14 to December 1 and again from the 22d to the 24th. The lower White River continued above flood stage from November 17 to December 18. Damage from this flooding was negligible.

Red Basin.--The flooding on the Sulphur River at Hagansport, Tex., on the 26th was due to moderately heavy rain on the 24th and 25th. Rainfall ranged from 0.3 inch to 1.26 inches at Honey Grove, Tex. Flood damage was insignificant.

Lower Mississippi Basin.--The St. Francis River was above flood at St. Francis and Parkin, Ark., as the month began, but receded within its banks shortly afterward. Moderate to heavy rain between the 17th and 20th caused the St. Francis to overflow again at the same points and also at Fisk, Mo. Damage from the overflows in December was negligible.

WEST GULF OF MEXICO DRAINAGE

The Sabine River was above flood stage at Bon Weir, Tex., from November 22 to December 10 and at Deweyville, Tex., from November 11 to December 17. No damage was reported.

Releases from Lavon Reservoir caused a high flow in the East Fork of the Trinity River most of the month with slight overflow at Rockwall, Tex., on the 18th and 19th. There was some flooding of lowlands near the channel, but no appreciable damage was reported. The main stem of the Trinity continued above flood stage at Liberty, Tex., until the 4th. Heavy rain in the lower Trinity on the 26th and 27th caused a sharp rise at Riverside and Liberty, Tex. At Liberty, Tex., the river rose from 11 feet on the 27th to 23.6 feet (0.4 foot below flood stage) on the 30th. No damage was reported.

PACIFIC SLOPE DRAINAGE

Several minor rises occurred on the Sacramento River and its tributaries during the last 2 weeks of December. Three of these rises caused overflow over Tisdale Weir, Calif., into Suter Bypass. The overflow depth did not much exceed 1 foot over the weir sill on any of the rises.

Heavy rainfall (8 to 9 inches) during the period from the 15th to the 21st caused some flooding along the Umpqua and Coquille Rivers in Oregon on the 21st and 22d. In the Coquille Basin, the south and middle forks were overflowing their banks during the evening of the 20th, below their confluence near Myrtle Point, Oreg., where low pastureland is flooded most of the winter. Considerable lowland inundation occurred but no damage resulted.

Columbia Basin.--There was some flooding on the Santiam River at Jefferson, Oreg., on the 7th due to heavy precipitation. Additional heavy rain from the 18th to the 22d and on the 26th and 27th caused more general flooding in the Willamette Basin. The average December precipitation over the Willamette Basin was near 9.5 inches. Rainfall on the east slope of the Coast Range and west slope of the Cascades averaged much heavier. Snow melt was a contributing factor to the floods of the 21st to the 23d. Temperatures were comparatively high during the month. Monthly mean temperatures ranged from 20° to 60° above normal. Flooding was minor except in the lower reaches of the Santiam and Yamhill Rivers. There was very little damage.

Note: All observations scheduled at 1200, G.C.T. "Number of observations" refers to those of dynamic height only. Temperature, humidity or wind data may be missing for one or more pressure surfaces of some observations. The temperature and wind values are based on 15 or more observations at the surface or 5 observations at a standard pressure level for temperature and 10 for wind. Relative humidity data are not published for standard pressure surfaces having less than 16 actual observations.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

Solar radiation intensities, tabulated in langleys per minute on a surface normal to the direction of the sun.

S Slight haze - indeterminable
KS Slight smoke

Langley is the unit used to denote one gram calorie per square centimeter. An explanation of the formula used in computing the air mass values for each station listed above appears in the February 1957 issue, Vol. 8, No. 2, page 63, of this publication.

SOLAR RADIATION DATA

DECEMBER 1957

Daily totals and average daily totals by weeks of solar and sky radiation, plus the radiation reflected from the ground, as received on a vertical surface facing south at Blue Hill, Mass. during the month

								Avg								Avg								Avg

Note: Langley is the unit used to denote one gram calorie per square centimeter.

NET RADIATION

Net radiation in langleys per day (midnight to midnight) at Raleigh, N. C., during the month

DECEMBER 1957

Date.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	Avg.
Langleys. . .	32	40	*19	*75	25	22	*81	*-4	23	*-21	*-77	-39	29	40	39	58	36	*48	*35	*-21	50	35	45	37	42	*35	29	*21	39	13	47	27

* Estimated values owing to occurrence of rain during period. While rain is falling, radiation is assumed to be zero.

The measurement is made with a Beckman and Whitley net exchange radiometer over a plot of Bermuda grass. The value represents the total incoming minus the total outgoing radiation of all wave lengths.

These data are of an experimental nature and are published as received from the North Carolina State College at Raleigh. The instrument with which they were measured has not been checked by the Weather Bureau.

SOLAR RADIATION DATA

Daily totals and weekly averages of solar radiation (direct and diffuse) received on a horizontal surface, tabulated in langleys. DECEMBER 1957

page 373-376:	Climatological Data	In the precipitation sections the word "hail" should be deleted in the "snow, sleet" column.
	Month:	Annual 1956
page 29:	North Dakota	State temperature extremes should be: 121°F. highest and -60°F. lowest.
	Month:	October 1957
page 454:	Hawaii	Temperature extremes: the lowest should be for Mauna Loa Slope Obs., 33°F. and the date, 2+.
	Month:	November 1957
page 485:	Springfield, Ill.	Accumulated heating degree days should be 1185.
	Greensboro, N. C.	Accumulated heating degree days should be 825.

Note.--Langley is the unit used to denote one gram calorie per square centimeter.
Values in parentheses are interpolated.

DESCRIPTION of CHARTS

CHART I. A. AVERAGE TEMPERATURE (°F.) AT SURFACE. B. DEPARTURE OF AVERAGE TEMPERATURE FROM NORMAL.-The average monthly temperature presented in Chart I-A is computed from the average daily maximum and the average daily minimum which in turn are computed from the daily maximum and minimum temperatures reported by some 225 first-order Weather Bureau stations and 700 cooperative stations. The departures from normal are presented in Chart I-B. They are based on the 30-year normals (1921-50) for the first-order Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for the cooperative stations.

CHART II. TOTAL PRECIPITATION.-

CHART III. A. DEPARTURE OF PRECIPITATION FROM NORMAL (INCHES). B. PERCENTAGE OF NORMAL PRECIPITATION.-Chart II is based on daily precipitation records at about 800 Weather Bureau and cooperative stations. In Chart III the anomaly in the month's precipitation is shown as a departure from the normal total and as a percentage of the normal total. These anomalies show the deviations from the 30-year normals (1921-50) for about 225 first-order Weather Bureau stations in Charts III A and B, supplemented in Chart III-A by the deviation from means of 25 years or more (mostly 1931-55) for about 700 cooperative stations.

CHART IV. TOTAL SNOWFALL.-

CHART V. A. PERCENTAGE OF NORMAL SNOWFALL. B. DEPTH OF SNOW ON GROUND.-Chart IV gives the total depth in inches of unmelted snowfall as reported during the month by Weather Bureau and cooperative stations. This is converted in Chart V-A into a percentage of the normal total amount computed for each Weather Bureau station having at least 10 years of record. The depth of snow on ground is that reported by both Weather Bureau and cooperative stations as of 7:00a.m. Eastern Standard Time on the last Monday of the month. This is reported only for the months December through April. The snowfall charts are presented each month November through April.

CHART VI. A. PERCENTAGE OF SKY COVER BETWEEN SUNRISE AND SUNSET. B. PERCENTAGE OF NORMAL SKY COVER BETWEEN SUNRISE AND SUNSET.-These charts are based on visual observations made hourly at Weather Bureau stations and averaged for the month. Sky cover includes, in addition to cloudiness, obscuration of the sky by fog, smoke, etc. Normal amount of sky cover is computed for stations having at least 10 years of record.

CHART VII. A. PERCENTAGE OF POSSIBLE SUNSHINE. B. PERCENTAGE OF NORMAL SUNSHINE.-Chart VII-A shows the amount of sunshine received in terms of percentage of the total hours of sunshine possible during the month. In Chart VII-B this is shown as a percentage of the normal number of hours of sunshine received. Normals are computed for Weather Bureau stations having at least 10 years of record.

CHART VIII. AVERAGE DAILY VALUES OF SOLAR RADIATION, DIRECT AND DIFFUSE.-Plotted on the chart are the monthly means of daily total solar radiation, both direct and diffuse, in langleys (gm. cal. $cm.^{-2}$) for all Weather Bureau stations which record this element. Supplementary data for which limits of accuracy are wider than for those data shown are drawn upon in making the analysis. The inset shows the percentages of the mean based on the period 1951-55.

CHART IX.-TRACKS OF CENTERS OF ANTICYCLONES AT SEA LEVEL.-

CHART X. TRACKS OF CENTERS OF CYCLONES AT SEA LEVEL.-Centers which can be identified for 24 hours or more are tracked in these charts. Semi-permanent features such as the Great Basin and Pacific Highs and Colorado and Mexico Lows are not shown. The 7:00 a.m. EST positions are shown by open circles, with the intermediate positions at 6-hour intervals shown by solid dots. The date is given above the circle and the central pressure to whole millibars below. A dashed track indicates a regeneration rather than actual movement to the next position. Solid squares indicate position of stationary center for period shown beside it.

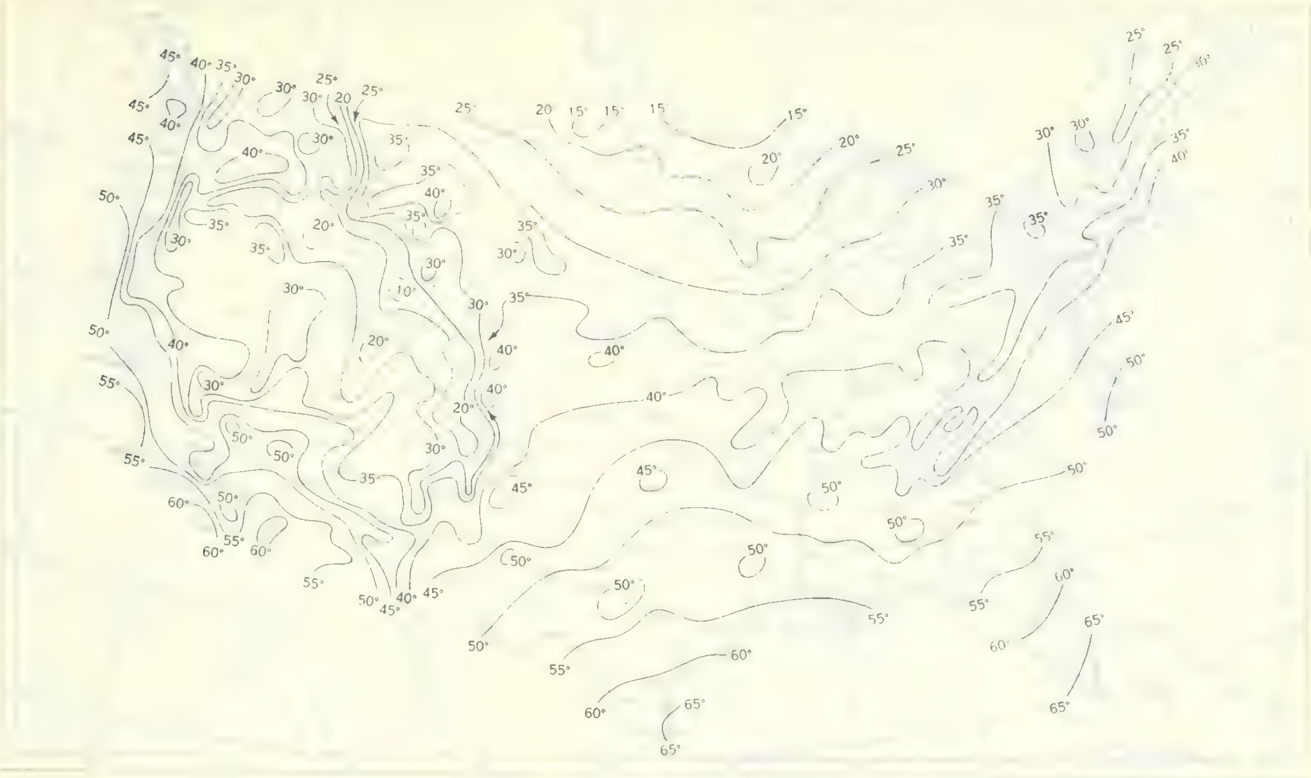
CHART XI. AVERAGE SEA LEVEL PRESSURE (mb.) AND SURFACE WINDROSES.-The average monthly sea level pressure is obtained from the averages of the 7:00 a.m. and 7:00 p.m. EST pressures reported at Weather Bureau stations. Windroses are based on the hourly wind directions (to 16 points of the compass) reported by Weather Bureau stations, each circle or arc indicating 5 percent of the time. The inset shows the departure of the average pressure from the normal average computed for each station having at least 10 years of record and for each 10° intersection in a diamond grid over the oceans from interpolated values read from the Historical Weather Maps for the 20 years of best coverage prior to 1940.

CHARTS XII-XVII. AVERAGE HEIGHT, TEMPERATURE, AND RESULTANT WINDS, 850, 700, 500, 300, 200, and 100 mb.-Height is given in geopotential meters and temperature in degrees Celsius. These are the averages of the 1200 GMT radiosonde reports. Wind speeds are given in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. Directions are shown to 360° of the compass. Winds are based on rawins at the indicated pressure surface and at 1200 GMT.

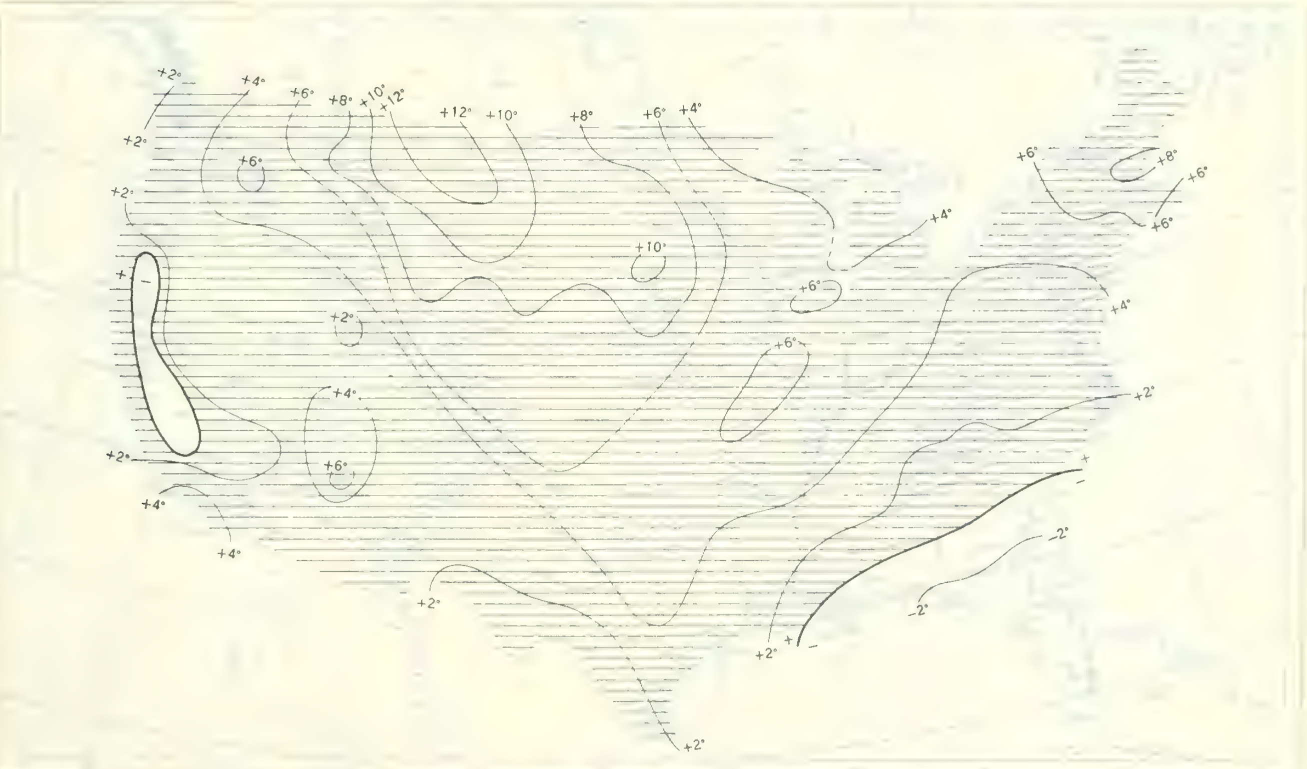
Tabulations of exact values of most of these charted elements for Weather Bureau stations are printed each month in tabular form in CLIMATOLOGICAL DATA, NATIONAL SUMMARY, and annual averages are presented in the CDNS Annual Issue each year.

USCOMM-WB-Asheville - 3/12/58 - 1850

Chart I. A. Average Temperature (°F.) at Surface, December 1957.



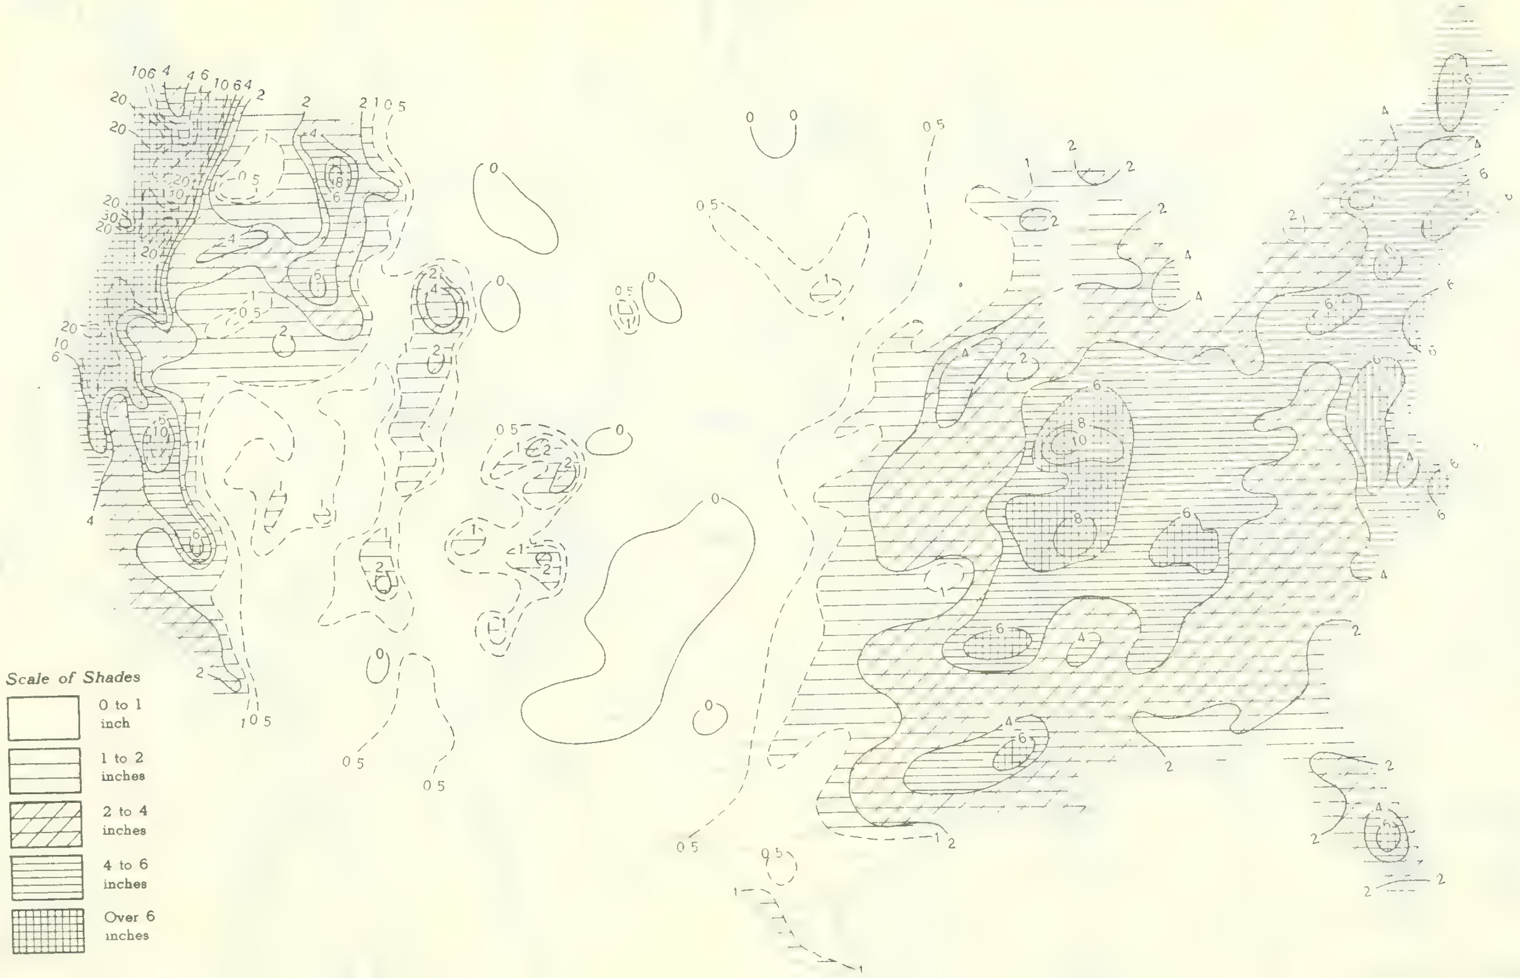
B. Departure of Average Temperature from Normal (°F.), December 1957.



A. Based on reports from over 900 Weather Bureau and cooperative stations. The monthly average is half the sum of the monthly average maximum and monthly average minimum, which are the average of the daily maxima and daily minima, respectively.

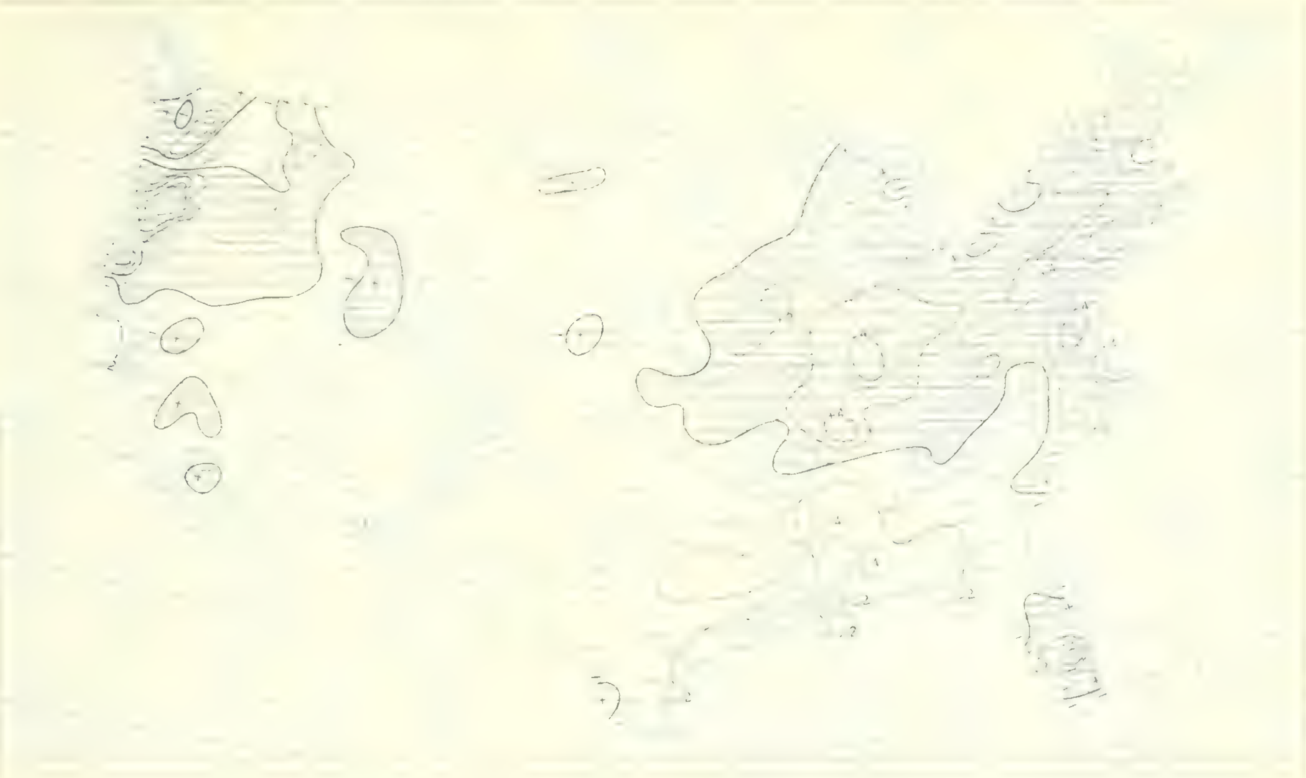
B. Departures from normal are based on the 30-yr. normals (1921-50) for Weather Bureau stations and on means of 25 years or more (mostly 1931-55) for cooperative stations.

Chart II. Total Precipitation (Inches), December 1957.

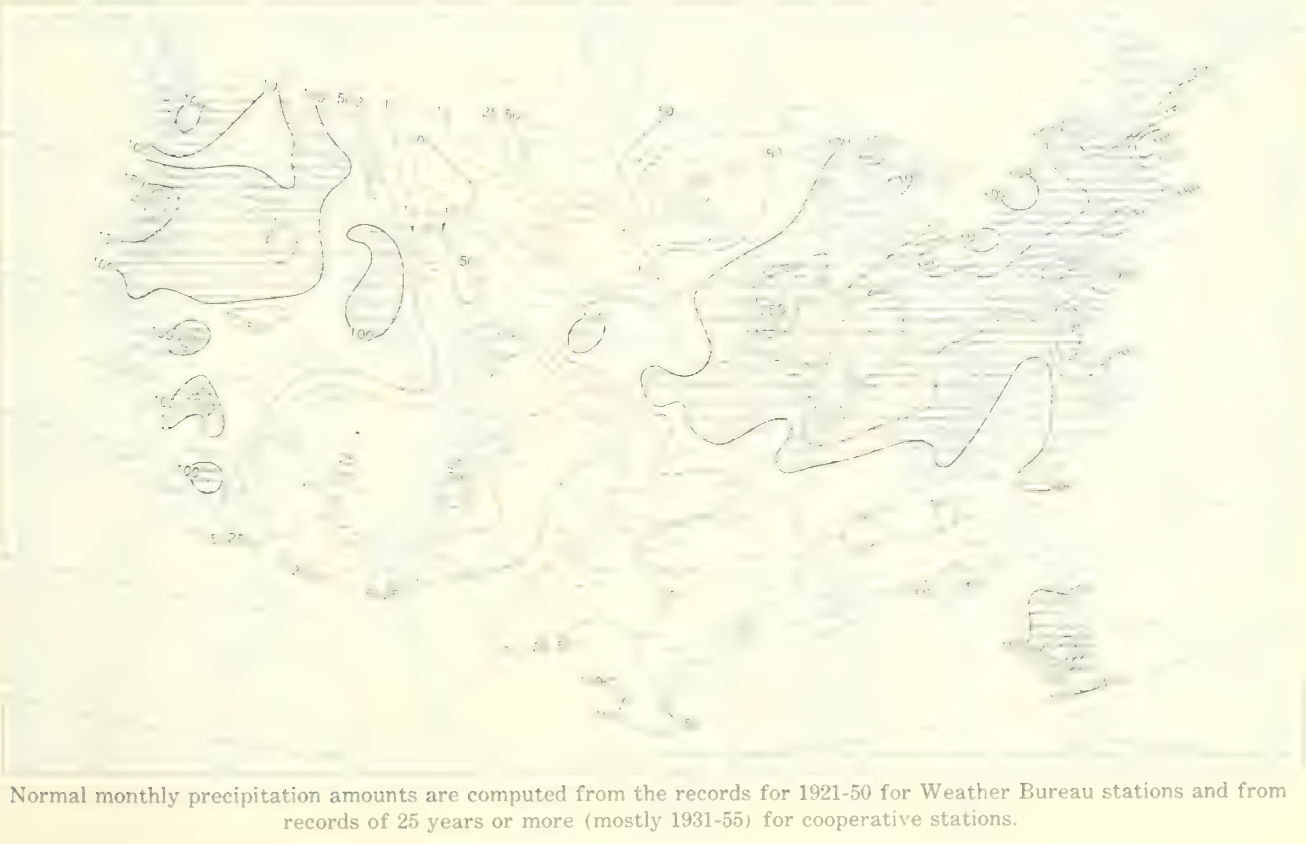


Based on daily precipitation records at about 800 Weather Bureau and cooperative stations.

Chart III. A. Departure of Precipitation from Normal (Inches), December 1957.

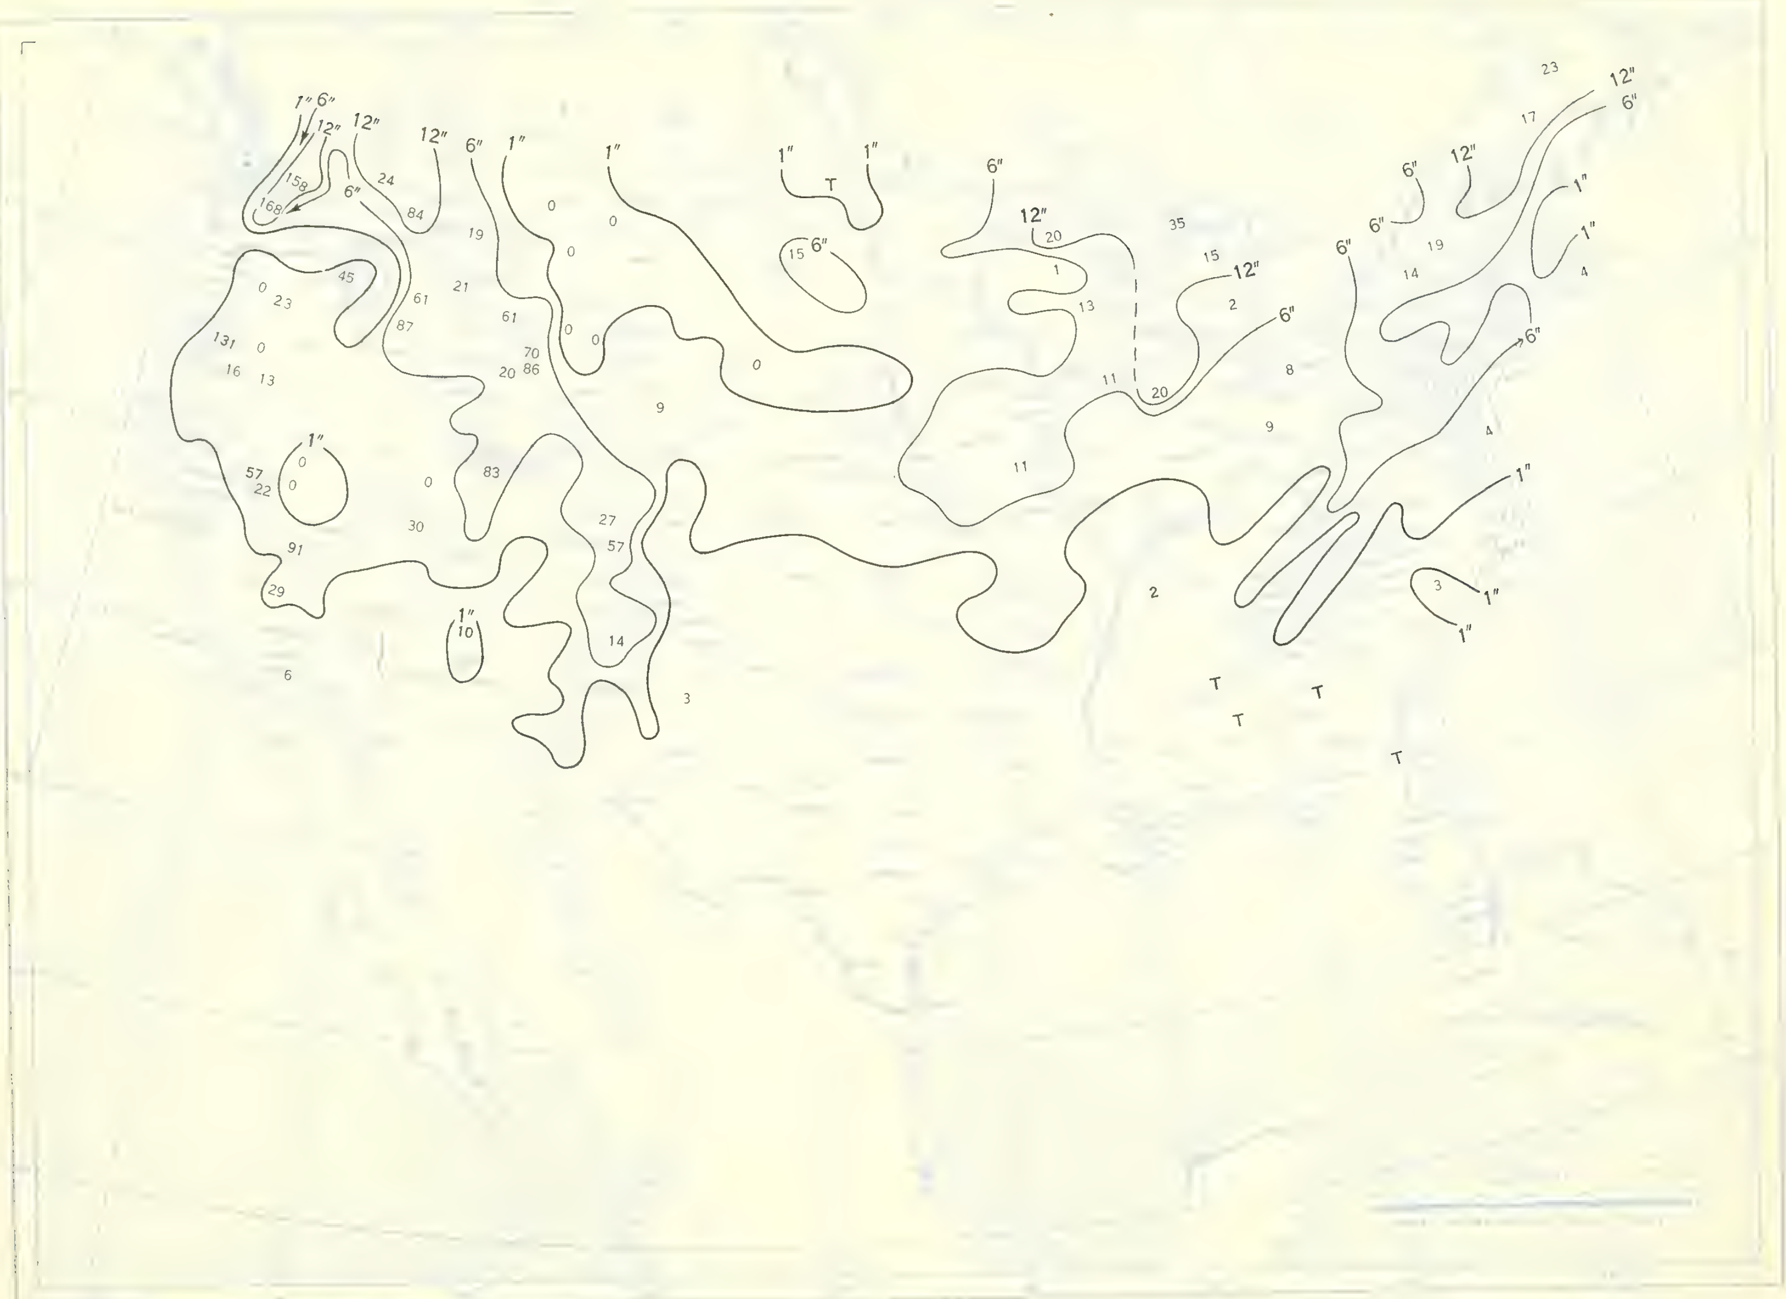


B. Percentage of Normal Precipitation, December 1957.



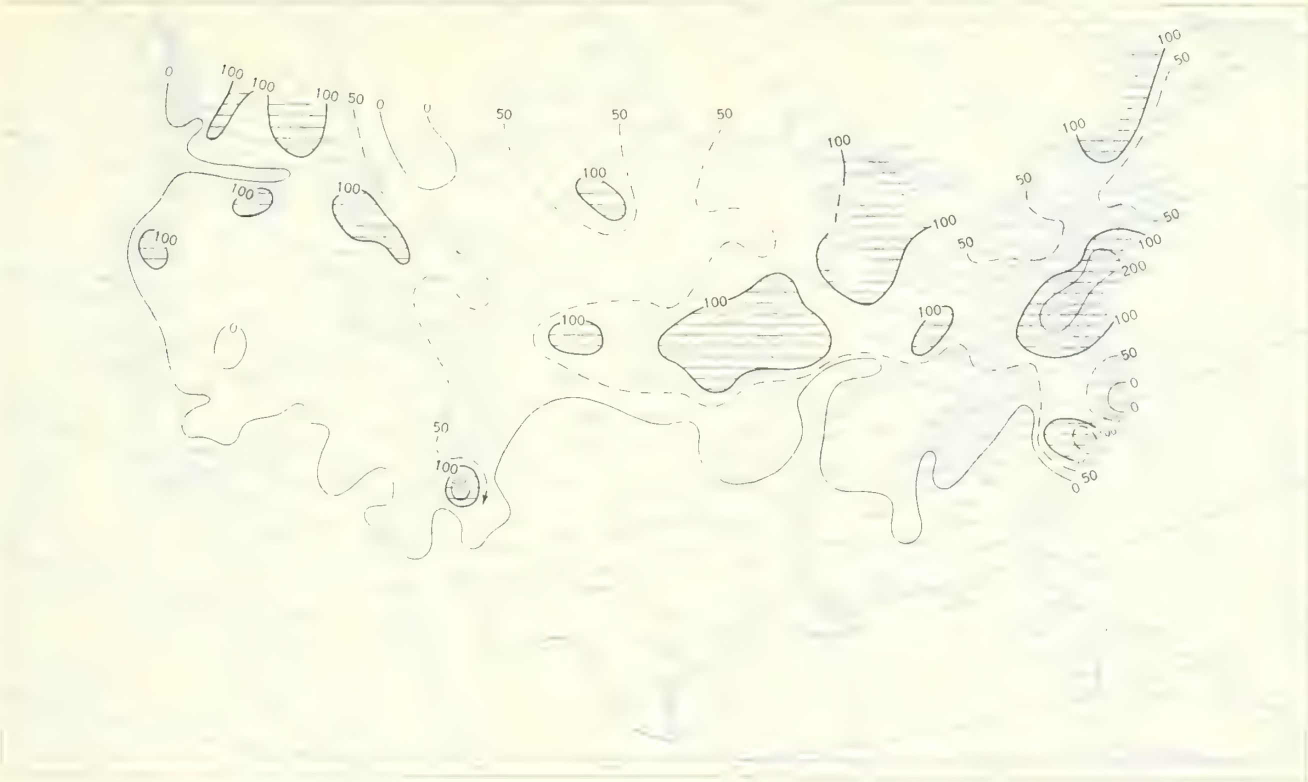
Normal monthly precipitation amounts are computed from the records for 1921-50 for Weather Bureau stations and from records of 25 years or more (mostly 1931-55) for cooperative stations.

Chart IV. Total Snowfall (Inches), December 1957.

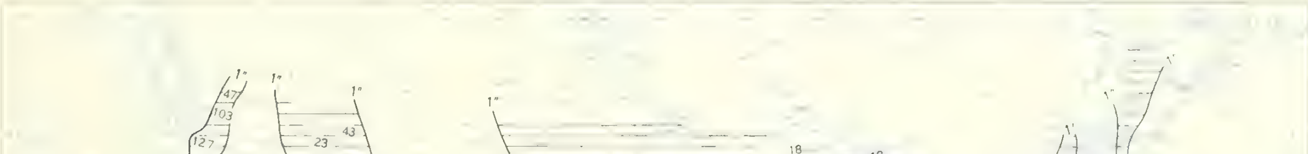


This is the total of unmelted snowfall recorded during the month at Weather Bureau and cooperative stations. This chart and Chart V are published only for the months of November through April although of course there is some snow at higher elevations, particularly in the far West, earlier and later in the year.

Chart V. A. Percentage of Normal Snowfall, December 1957.

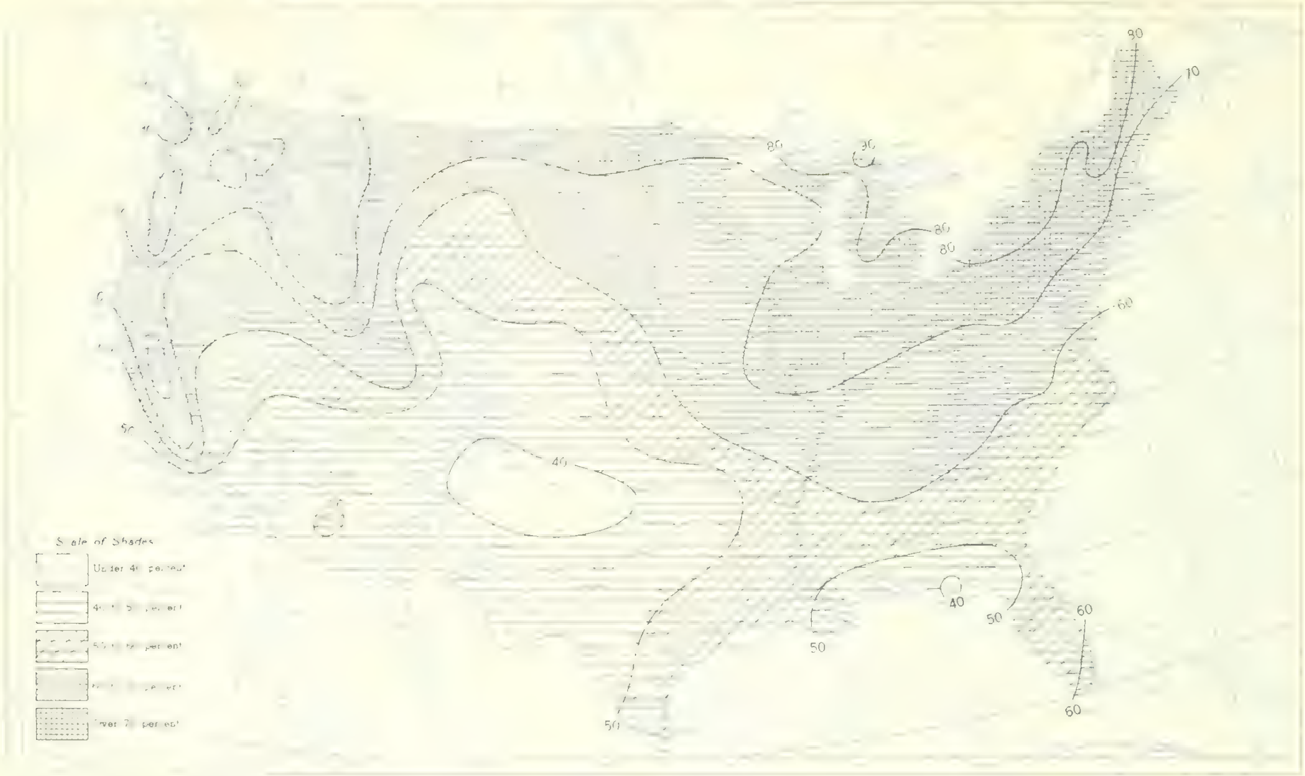


B. Depth of Snow on Ground (Inches), 7:00 a. m. E. S. T., December 30, 1957.

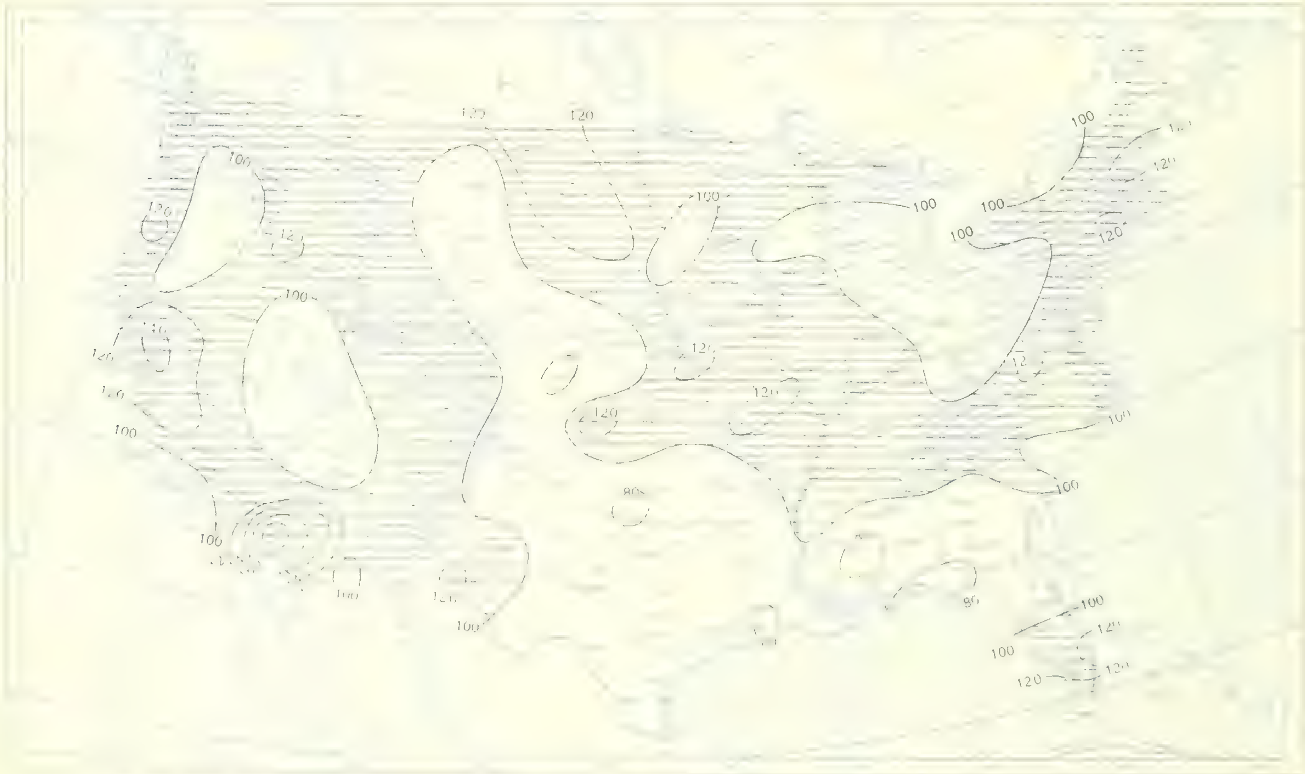


A. Amount of normal monthly snowfall is computed for Weather Bureau stations having at least 10 years of record.
B. Shows depth currently on ground at 7:00 a. m. E. S. T., of the Monday nearest the end of the month. It is based on reports from Weather Bureau and cooperative stations. Dashed line shows greatest southern extent of snowcover during month.

Chart VI. A. Percentage of Sky Cover Between Sunrise and Sunset, December 1957.

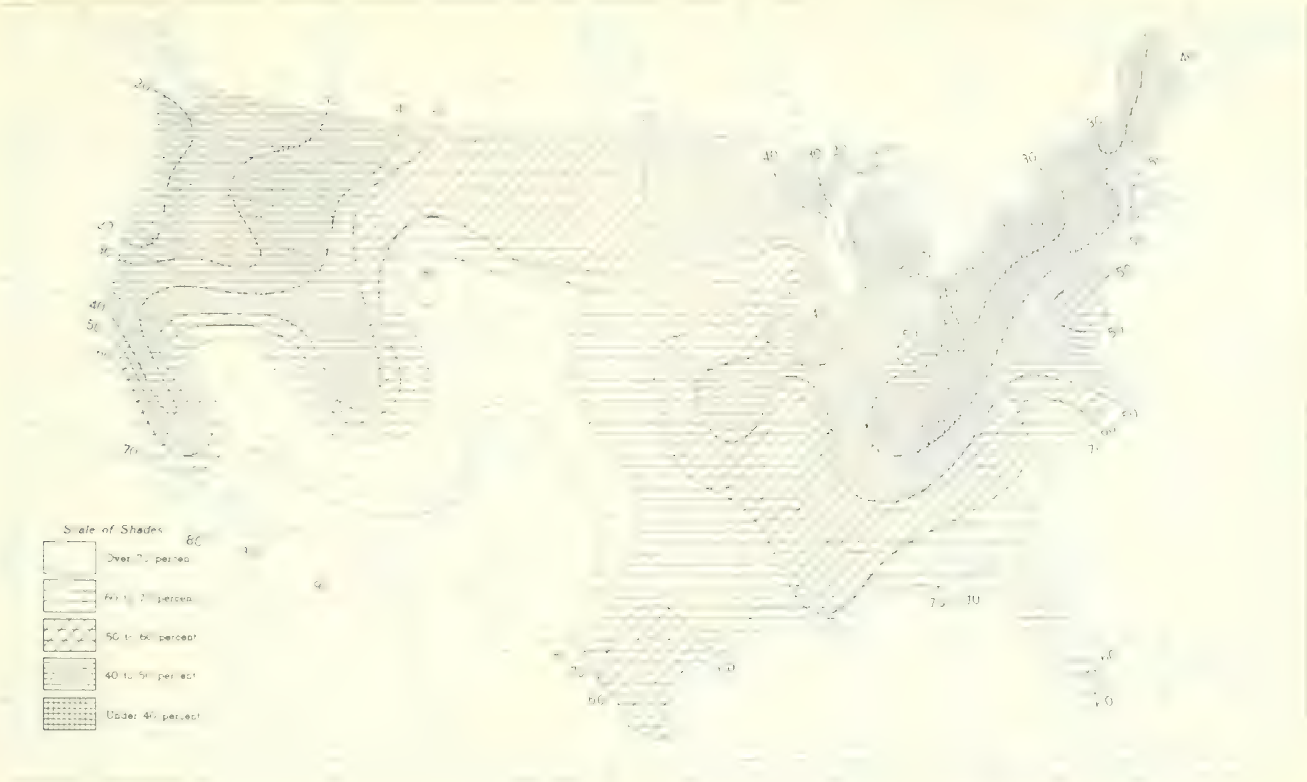


B. Percentage of Normal Sky Cover Between Sunrise and Sunset, December 1957.

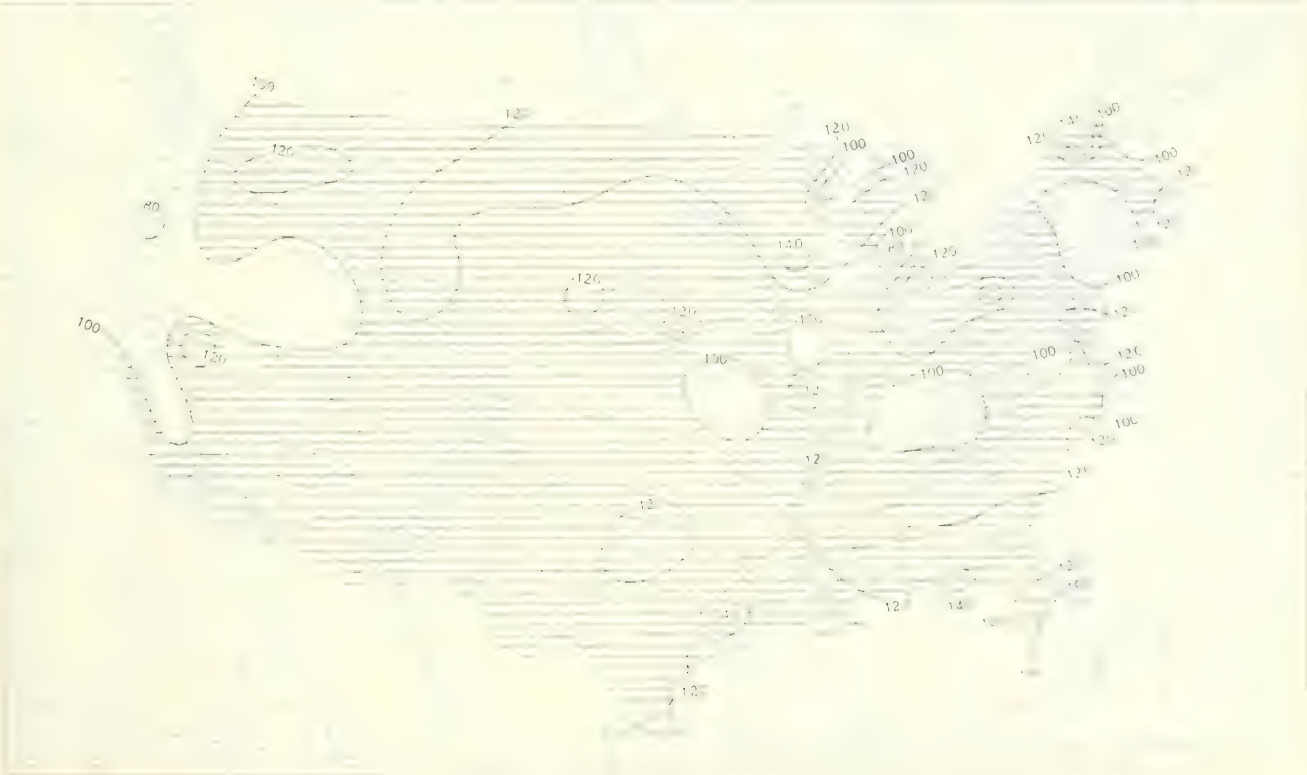


A. In addition to cloudiness, sky cover includes obscuration of the sky by fog, smoke, snow, etc. Chart based on visual observations made hourly at Weather Bureau stations and averaged over the month. B. Computations of normal amount of sky cover are made for stations having at least 10 years of record.

Chart VII. A. Percentage of Possible Sunshine, December 1957.



B. Percentage of Normal Sunshine, December 1957.



A. Computed from total number of hours of observed sunshine in relation to total number of possible hours of sunshine during month. B. Normals are computed for stations having at least 10 years of record.

Chart VIII. Average Daily Values of Solar Radiation, Direct + Diffuse, December 1957. Inset: Percentage of Mean Daily Solar Radiation, December 1957. (Mean based on period 1951-55.)

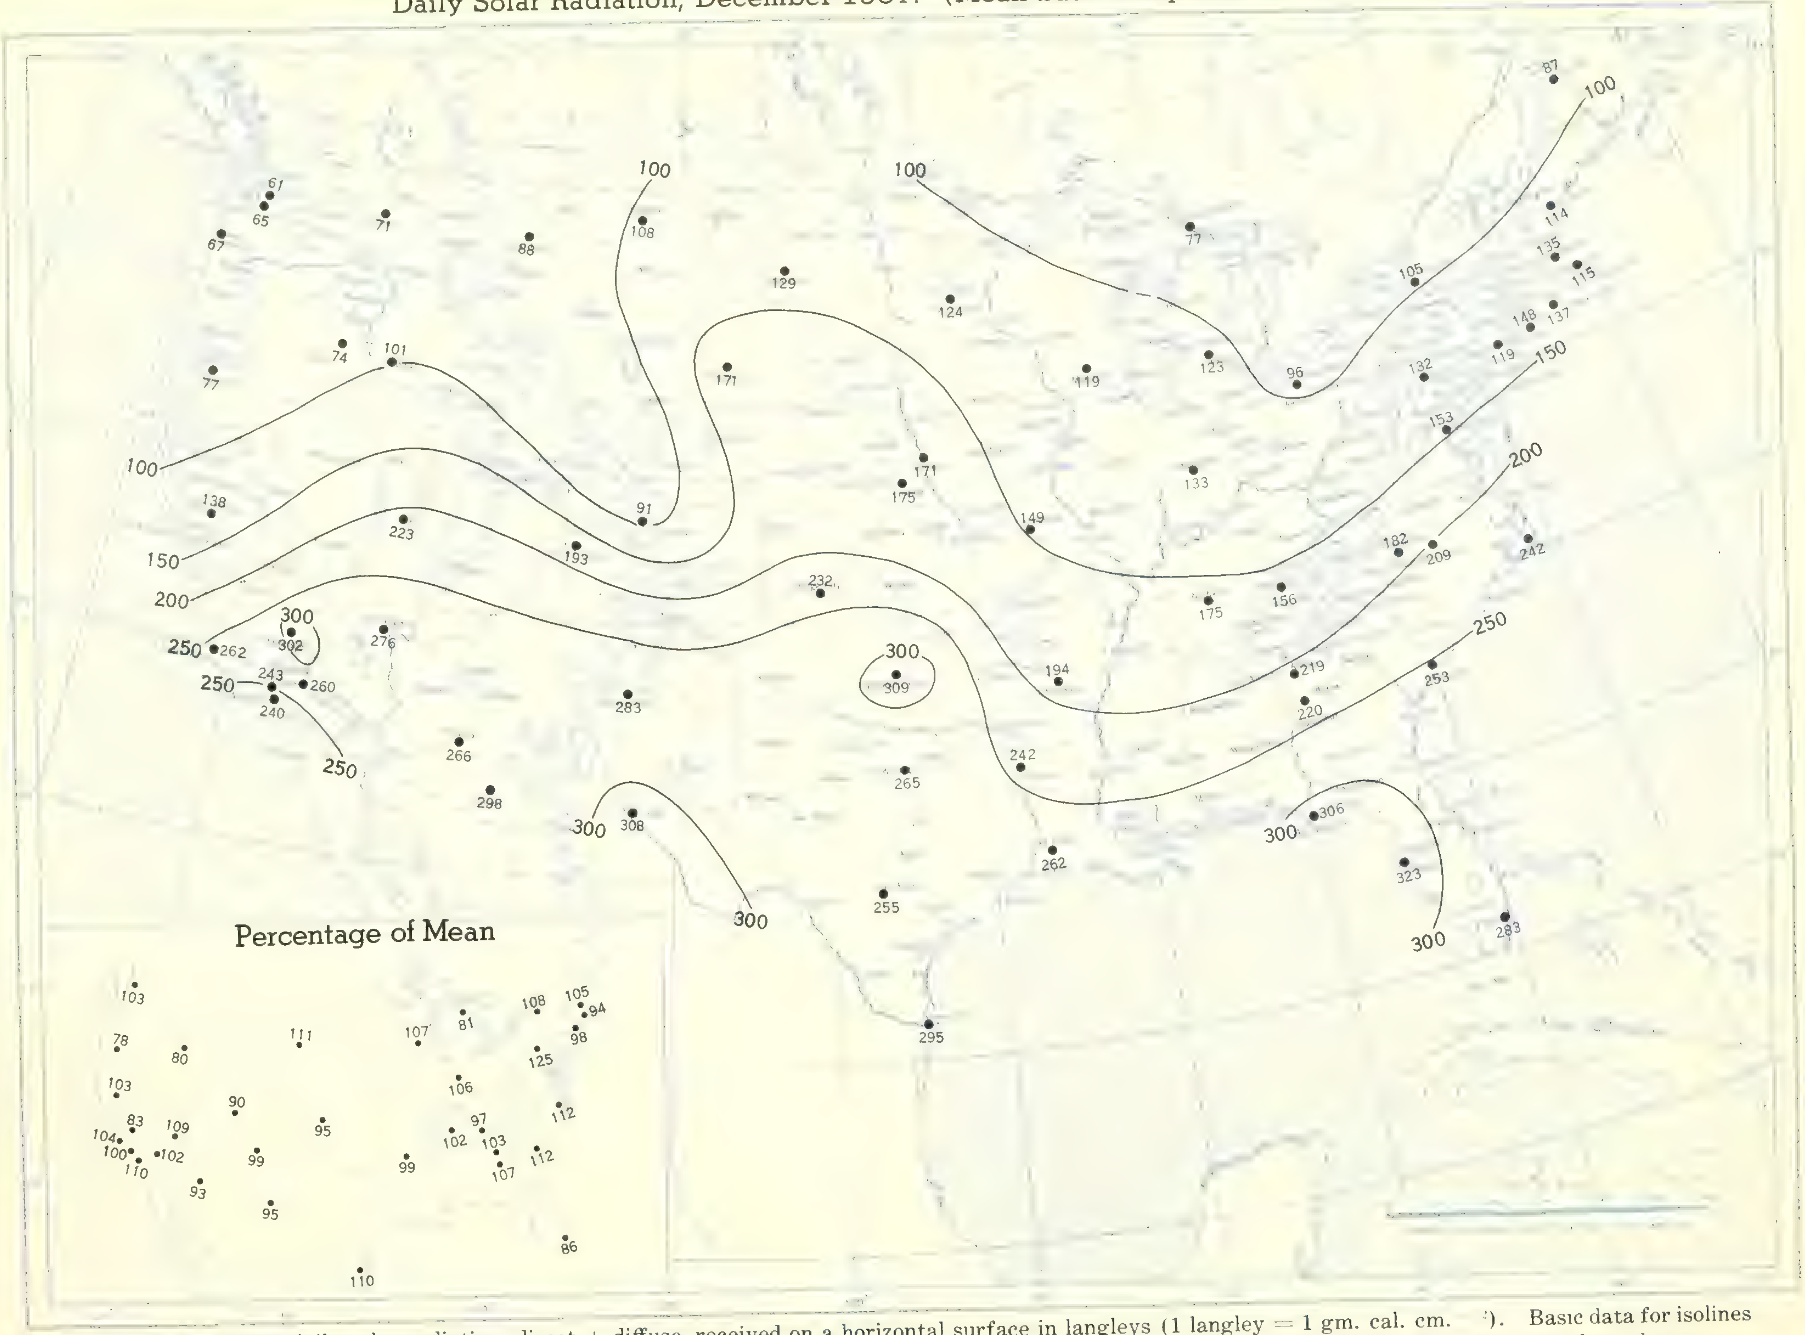


Chart shows mean daily solar radiation, direct + diffuse, received on a horizontal surface in langleys (1 langley = 1 gm. cal. cm.$^{-2}$). Basic data for isolines are shown on chart. Further estimates are obtained from supplementary data for which limits of accuracy are wider than for those data shown.

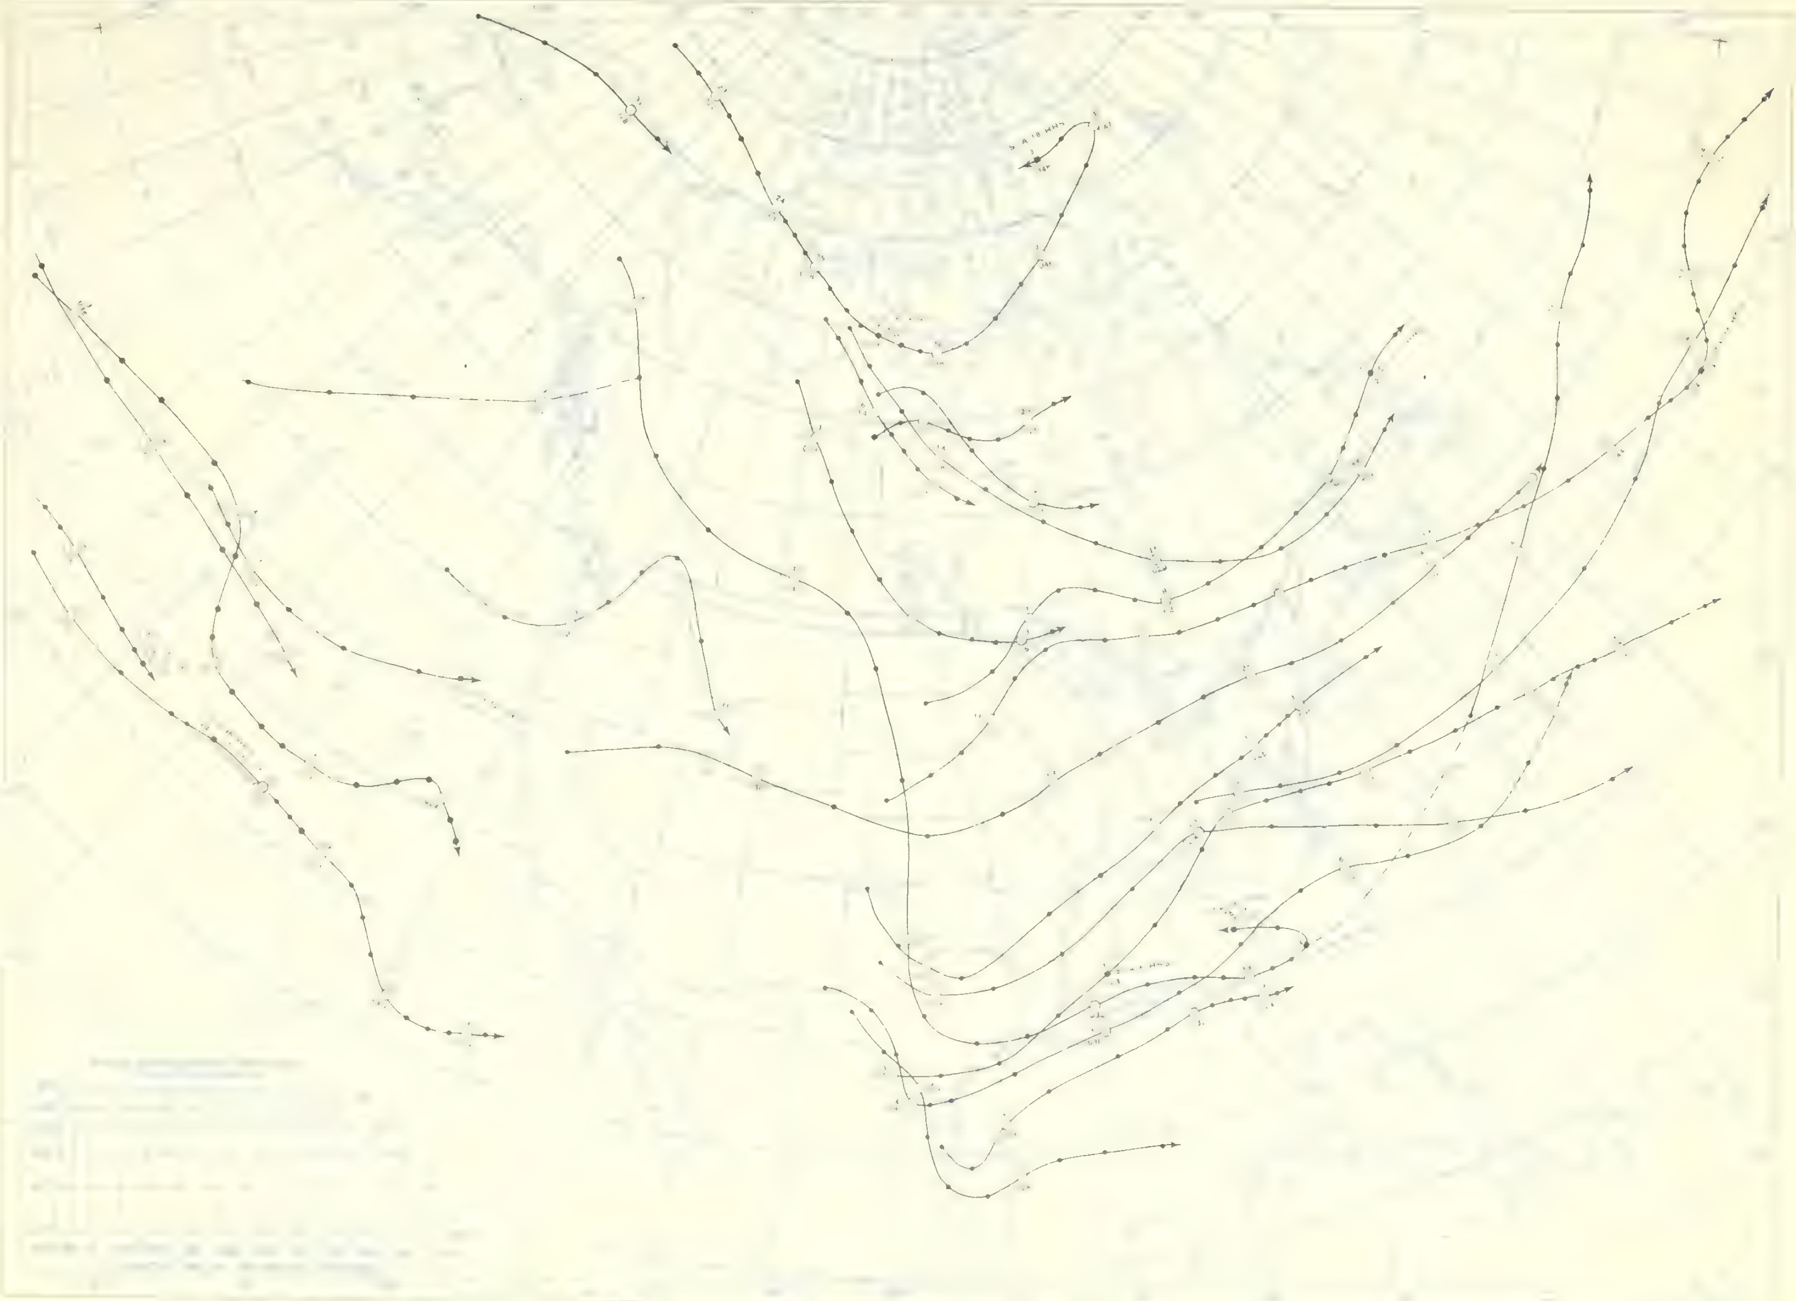
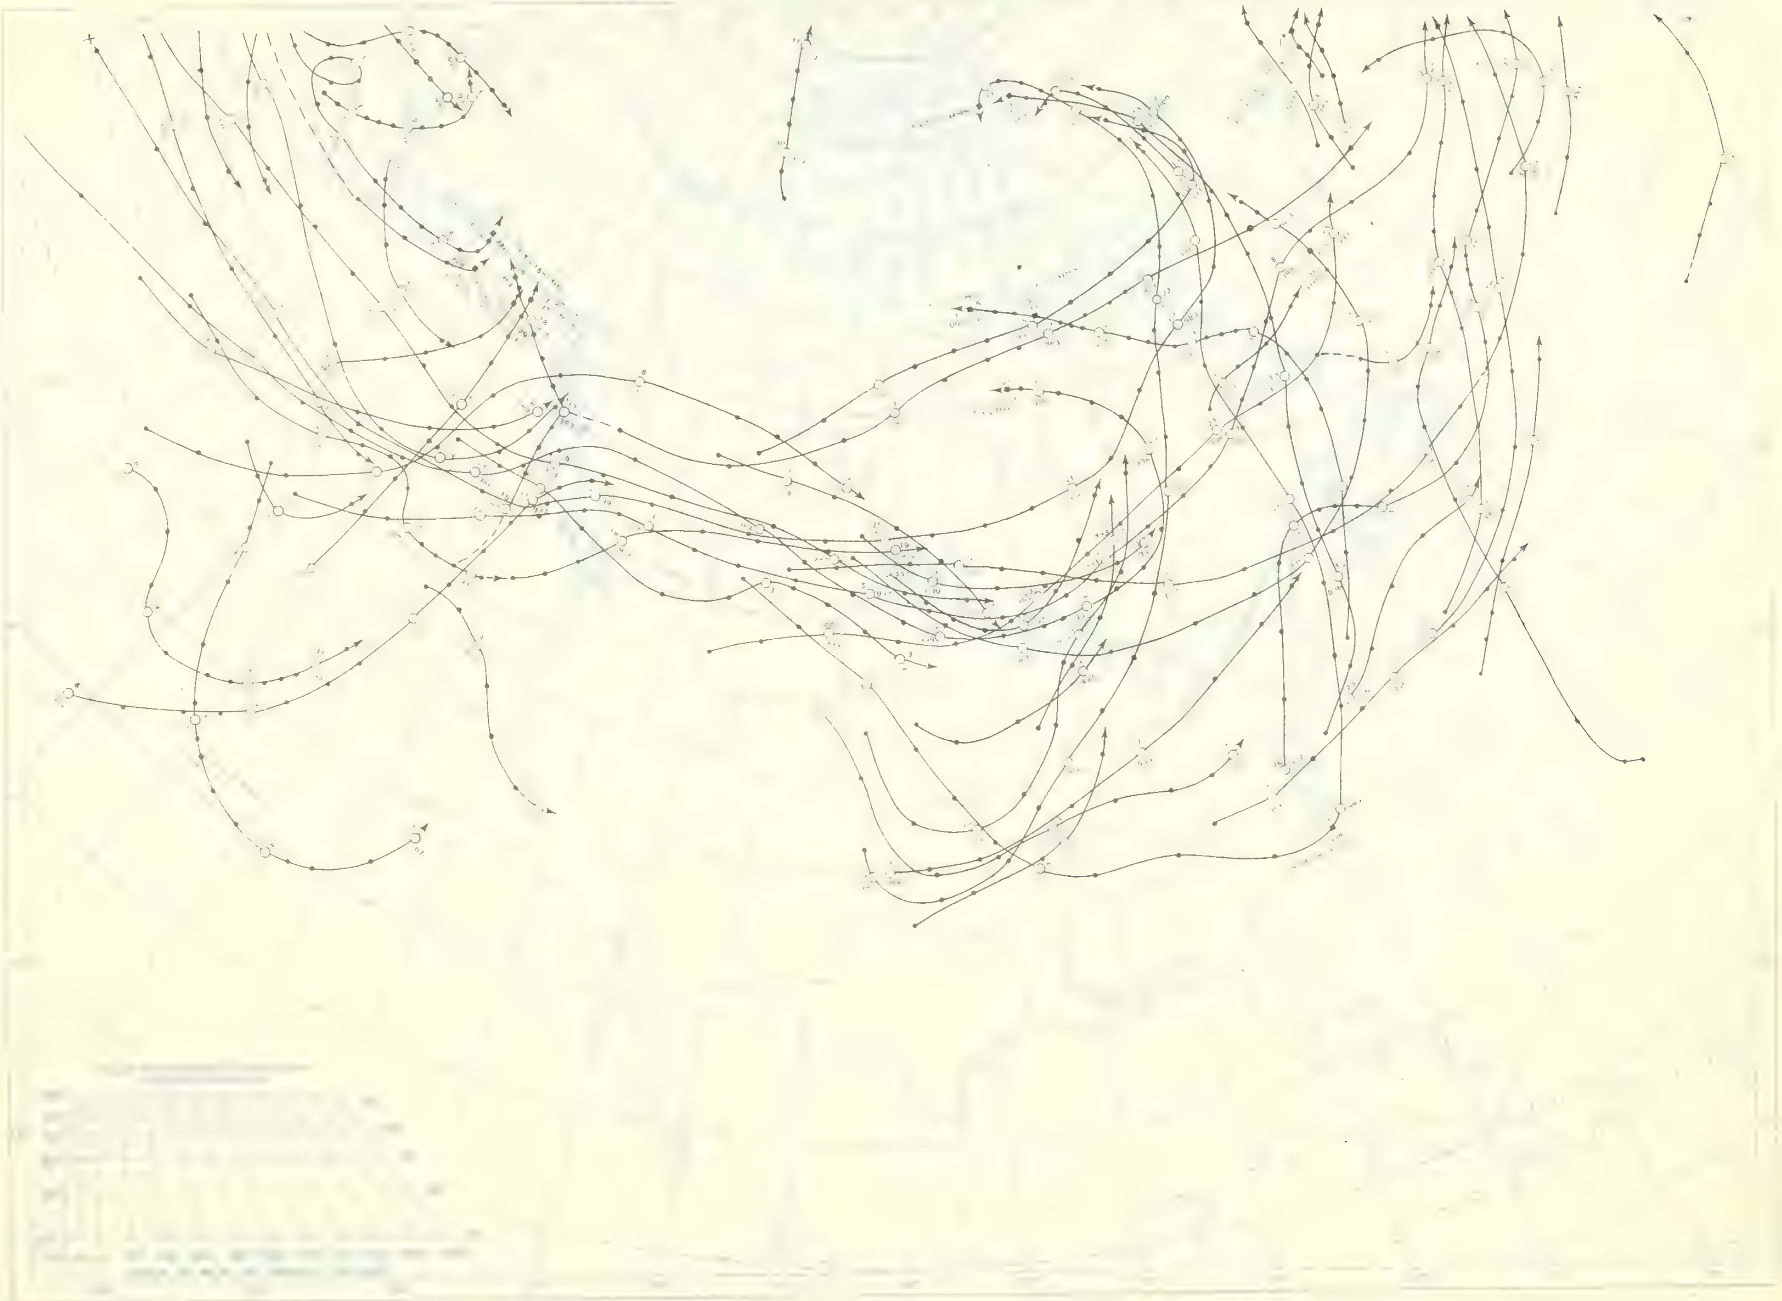
Chart IX. Tracks of Centers of Anticyclones at Sea Level, December 1957.



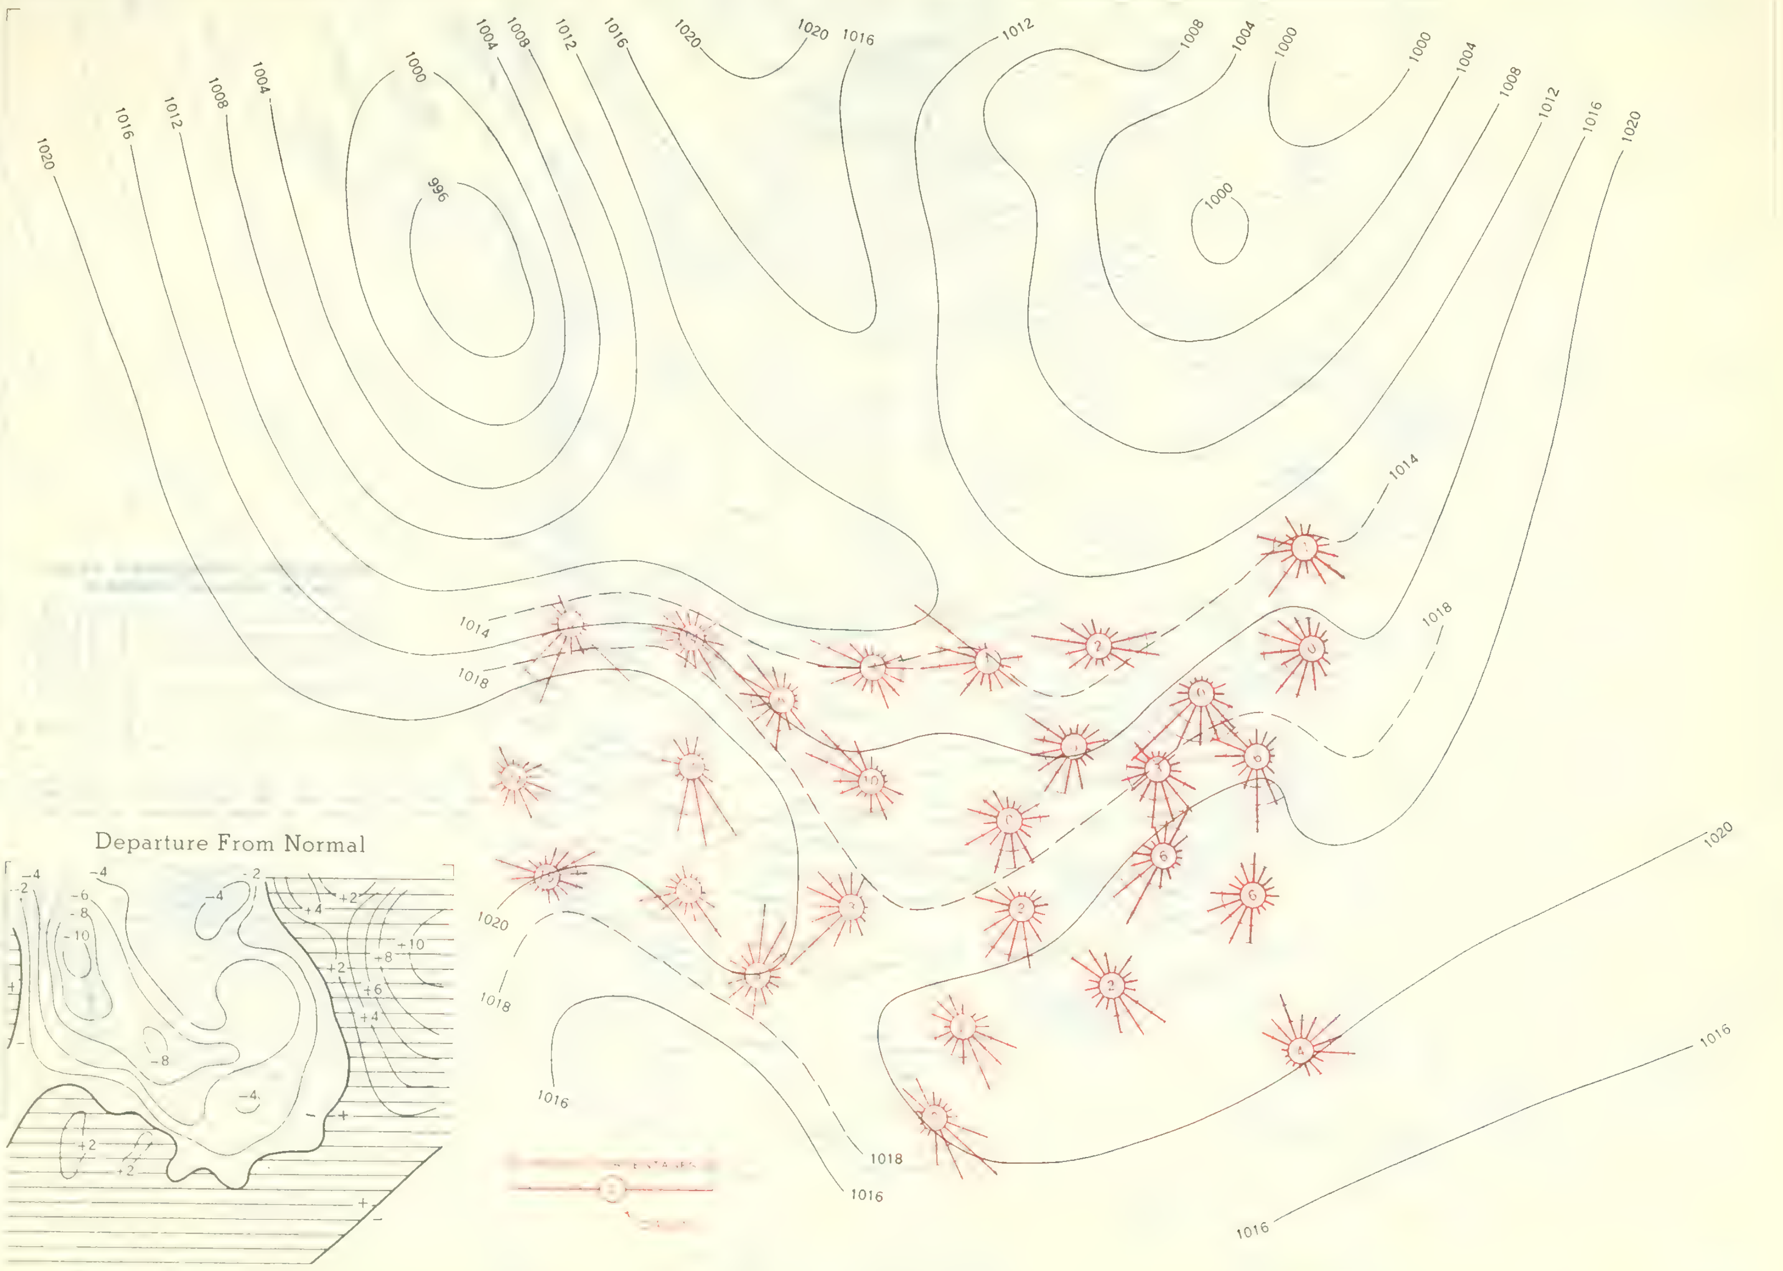
Circle indicates position of center at 7:00 a. m. E. S. T. Figure above circle indicates date, figure below, pressure to nearest millibar. Dots indicate intervening 6-hourly positions. Squares indicate position of stationary center for period shown. Dashed line in track indicates reformation at new position. Only those centers which could be identified for 24 hours or more are included.

Chart X. Tracks of Centers of Cyclones at Sea Level, December 1957.



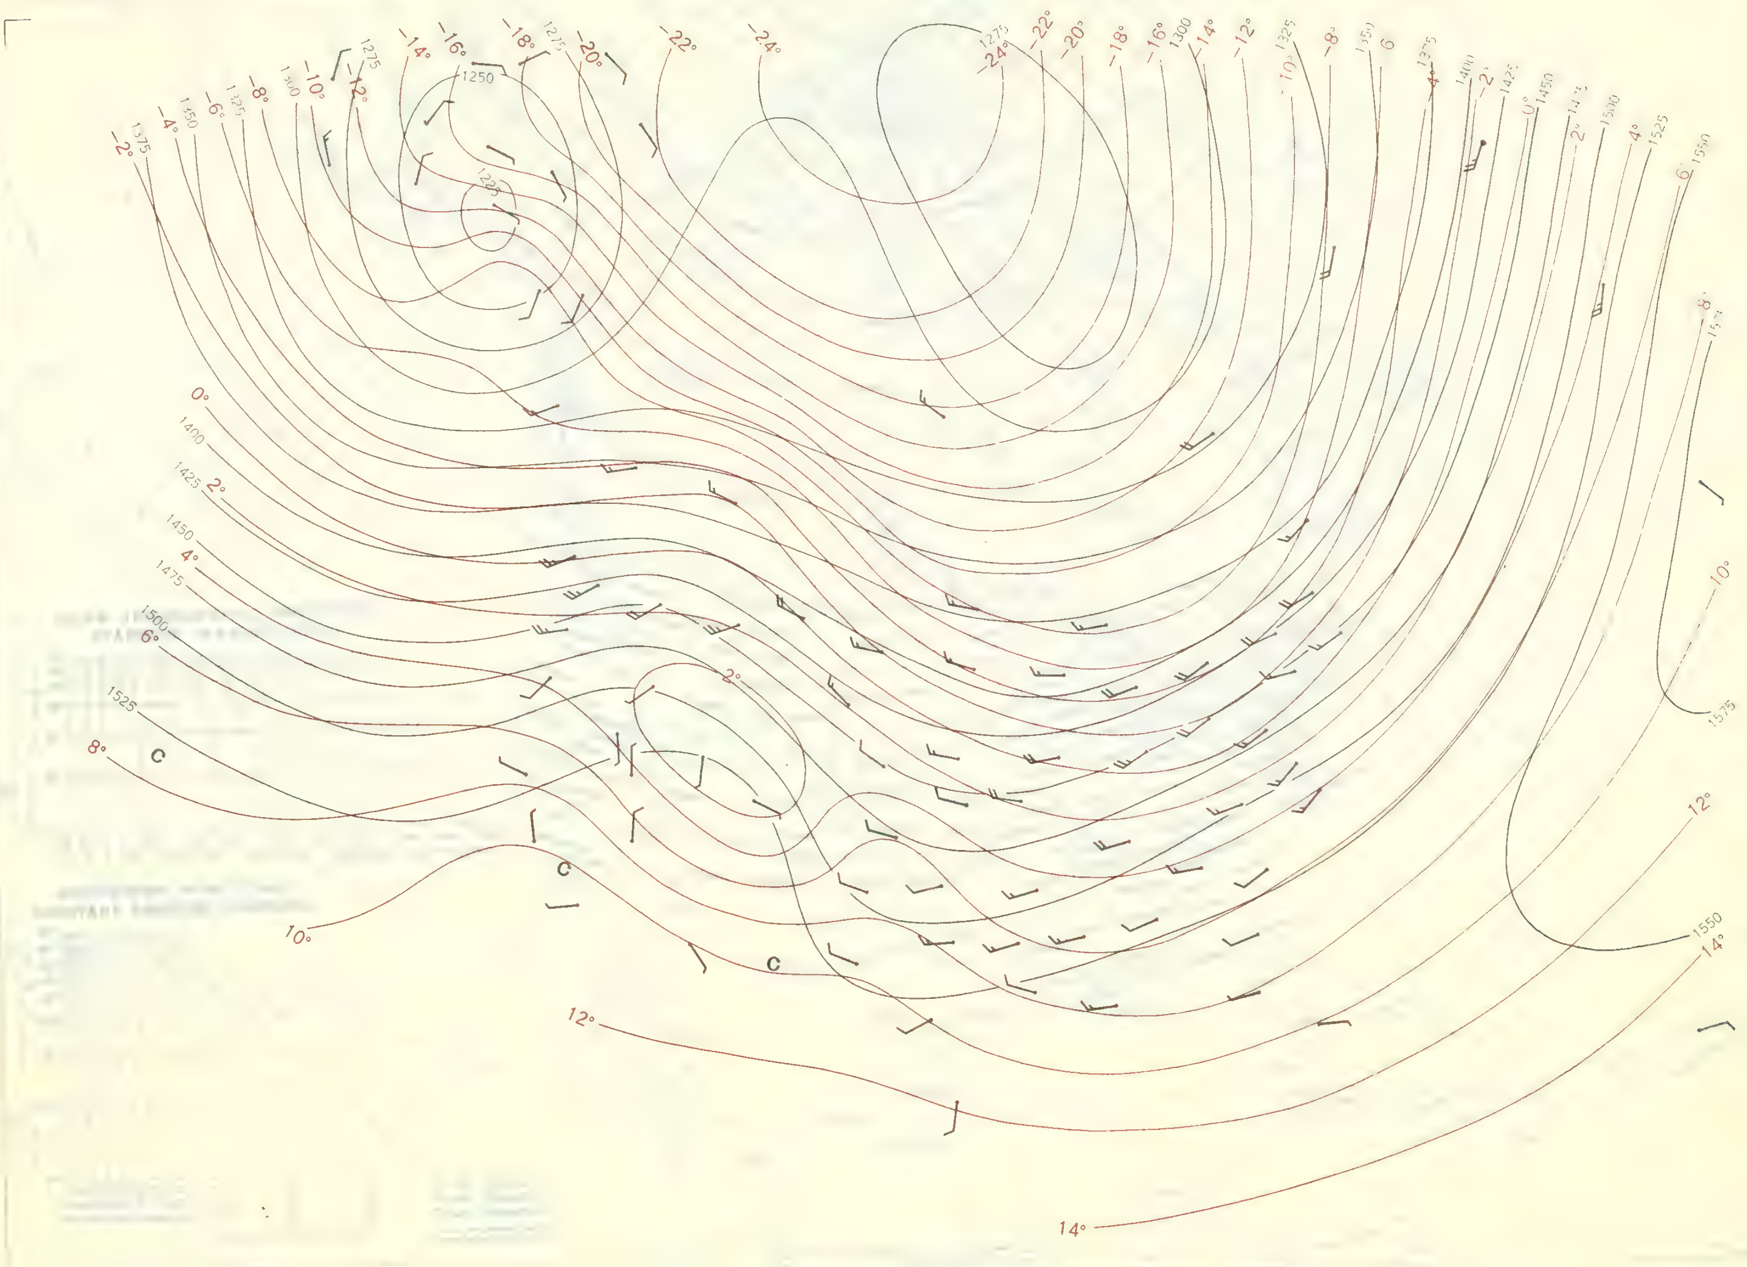
Circle indicates position of center at 7:00 a. m. E. S. T. See Chart IX for explanation of symbols.

Chart XI. Average Sea Level Pressure (mb.) and Surface Windroses, December 1957. Inset: Departure of Average Pressure (mb.) from Normal, December 1957.



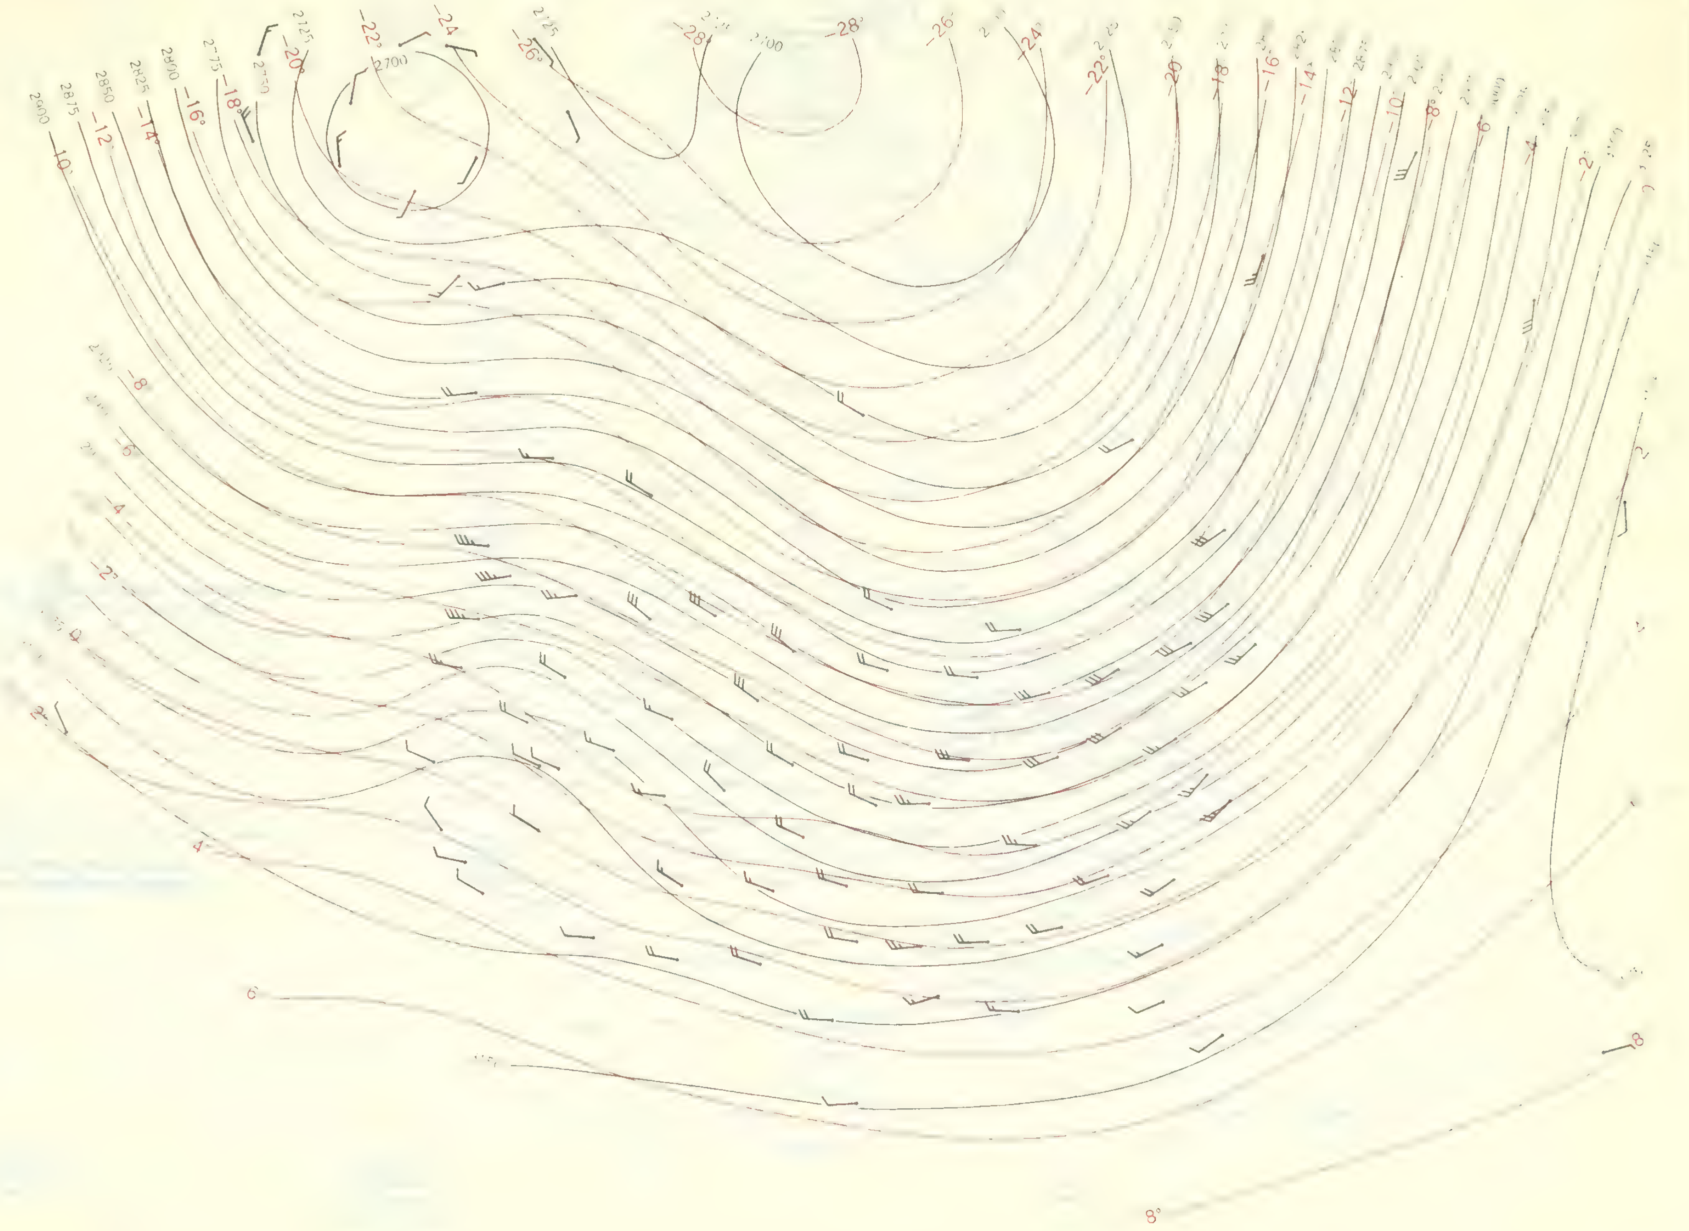
Average sea level pressures are obtained from the averages of the 7:00 a.m. and 7:00 p.m. E.S.T. readings. Windroses show percentage of time wind blew from 16 compass points or was calm during the month. Pressure normals are computed for stations having at least 10 years of record and for 10° intersections in a diamond grid based on readings from the Historical Weather Maps (1899-1939) for the 20 years of most complete data coverage prior to 1940.

Chart XII. 850-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



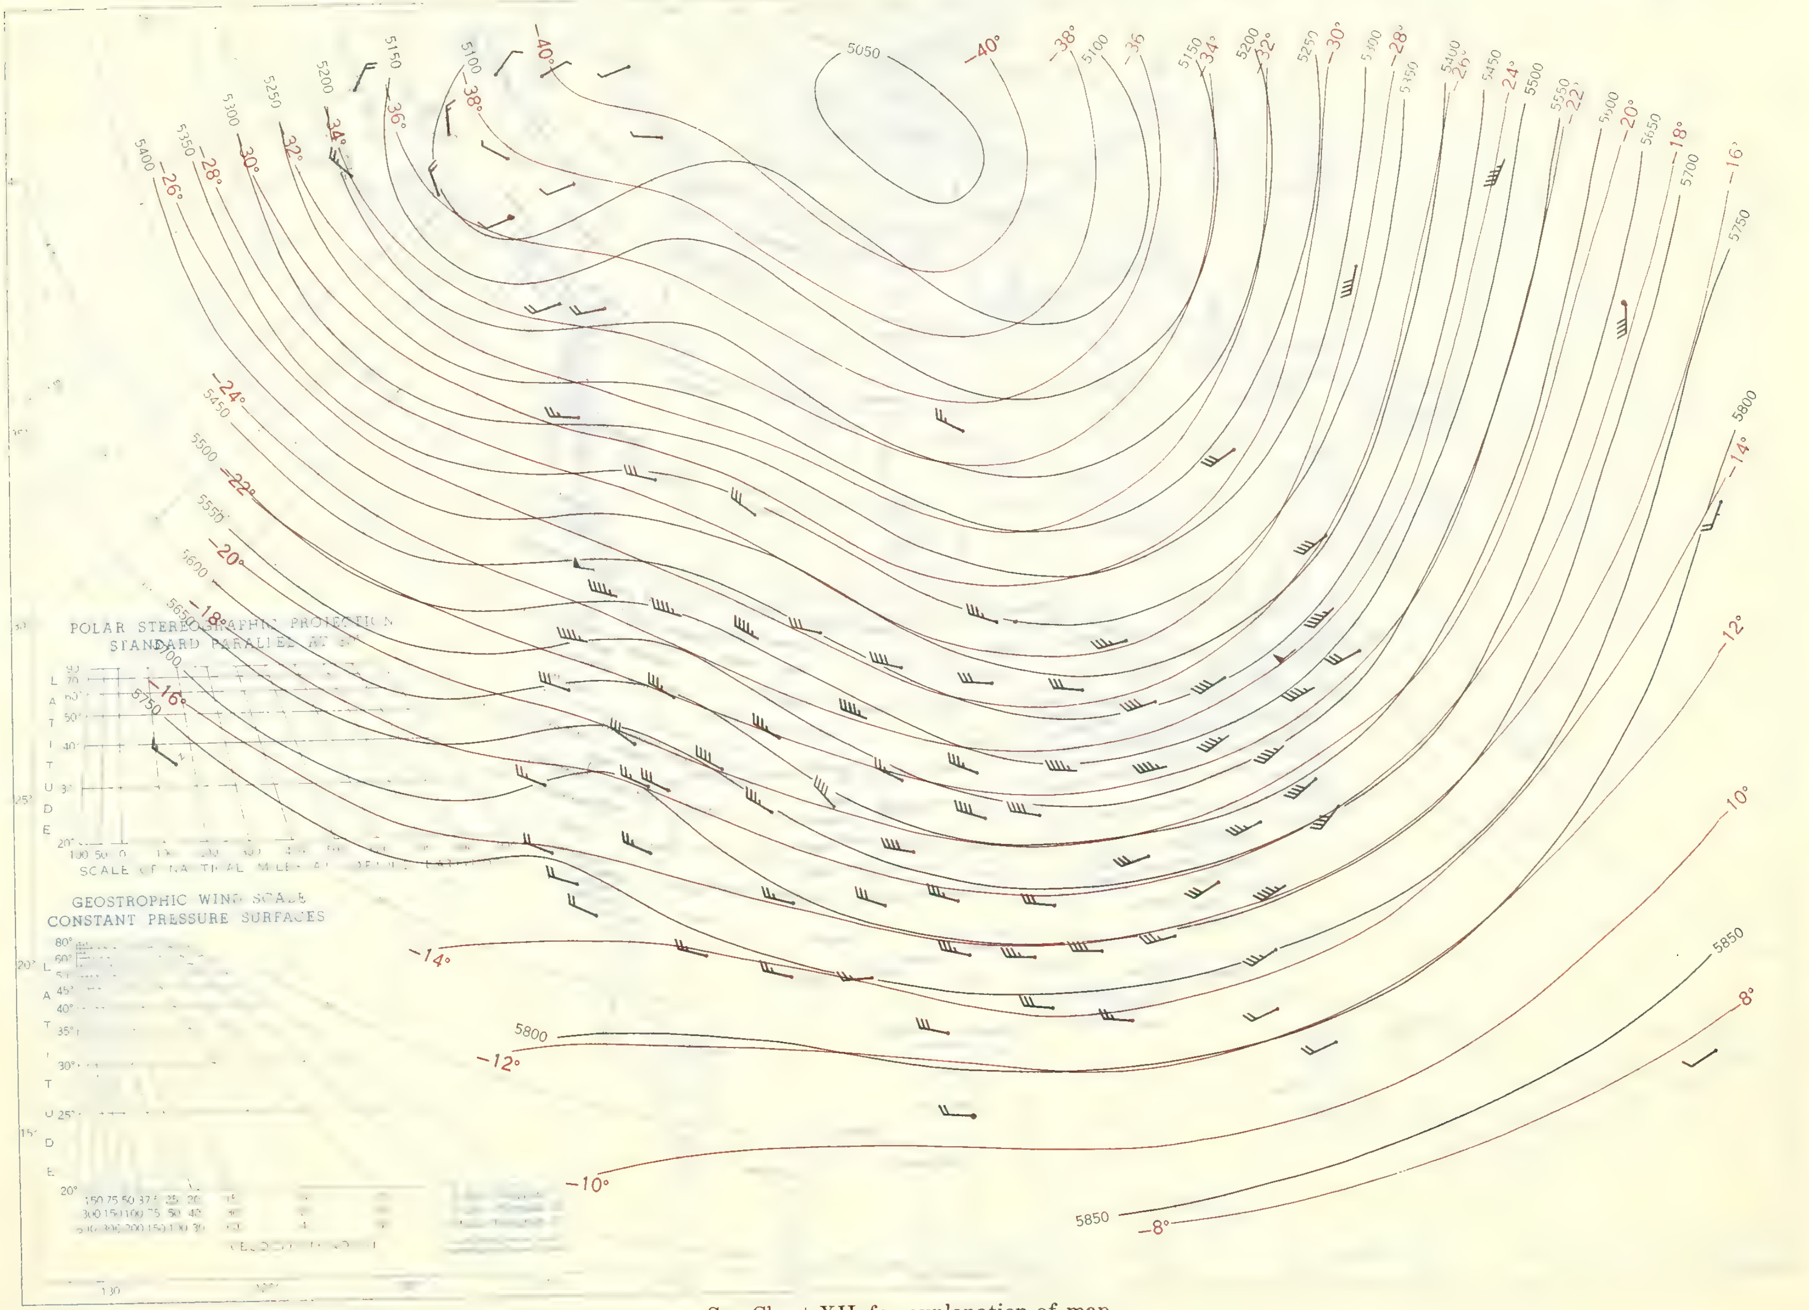
Height in geopotential meters (1 g.p.m. = 0.98 dynamic meters). Temperature in °C. Wind speed in knots; flag represents 50 knots, full feather 10 knots, and half feather 5 knots. All wind data are based on rawin observations.

Chart XIII. 700-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



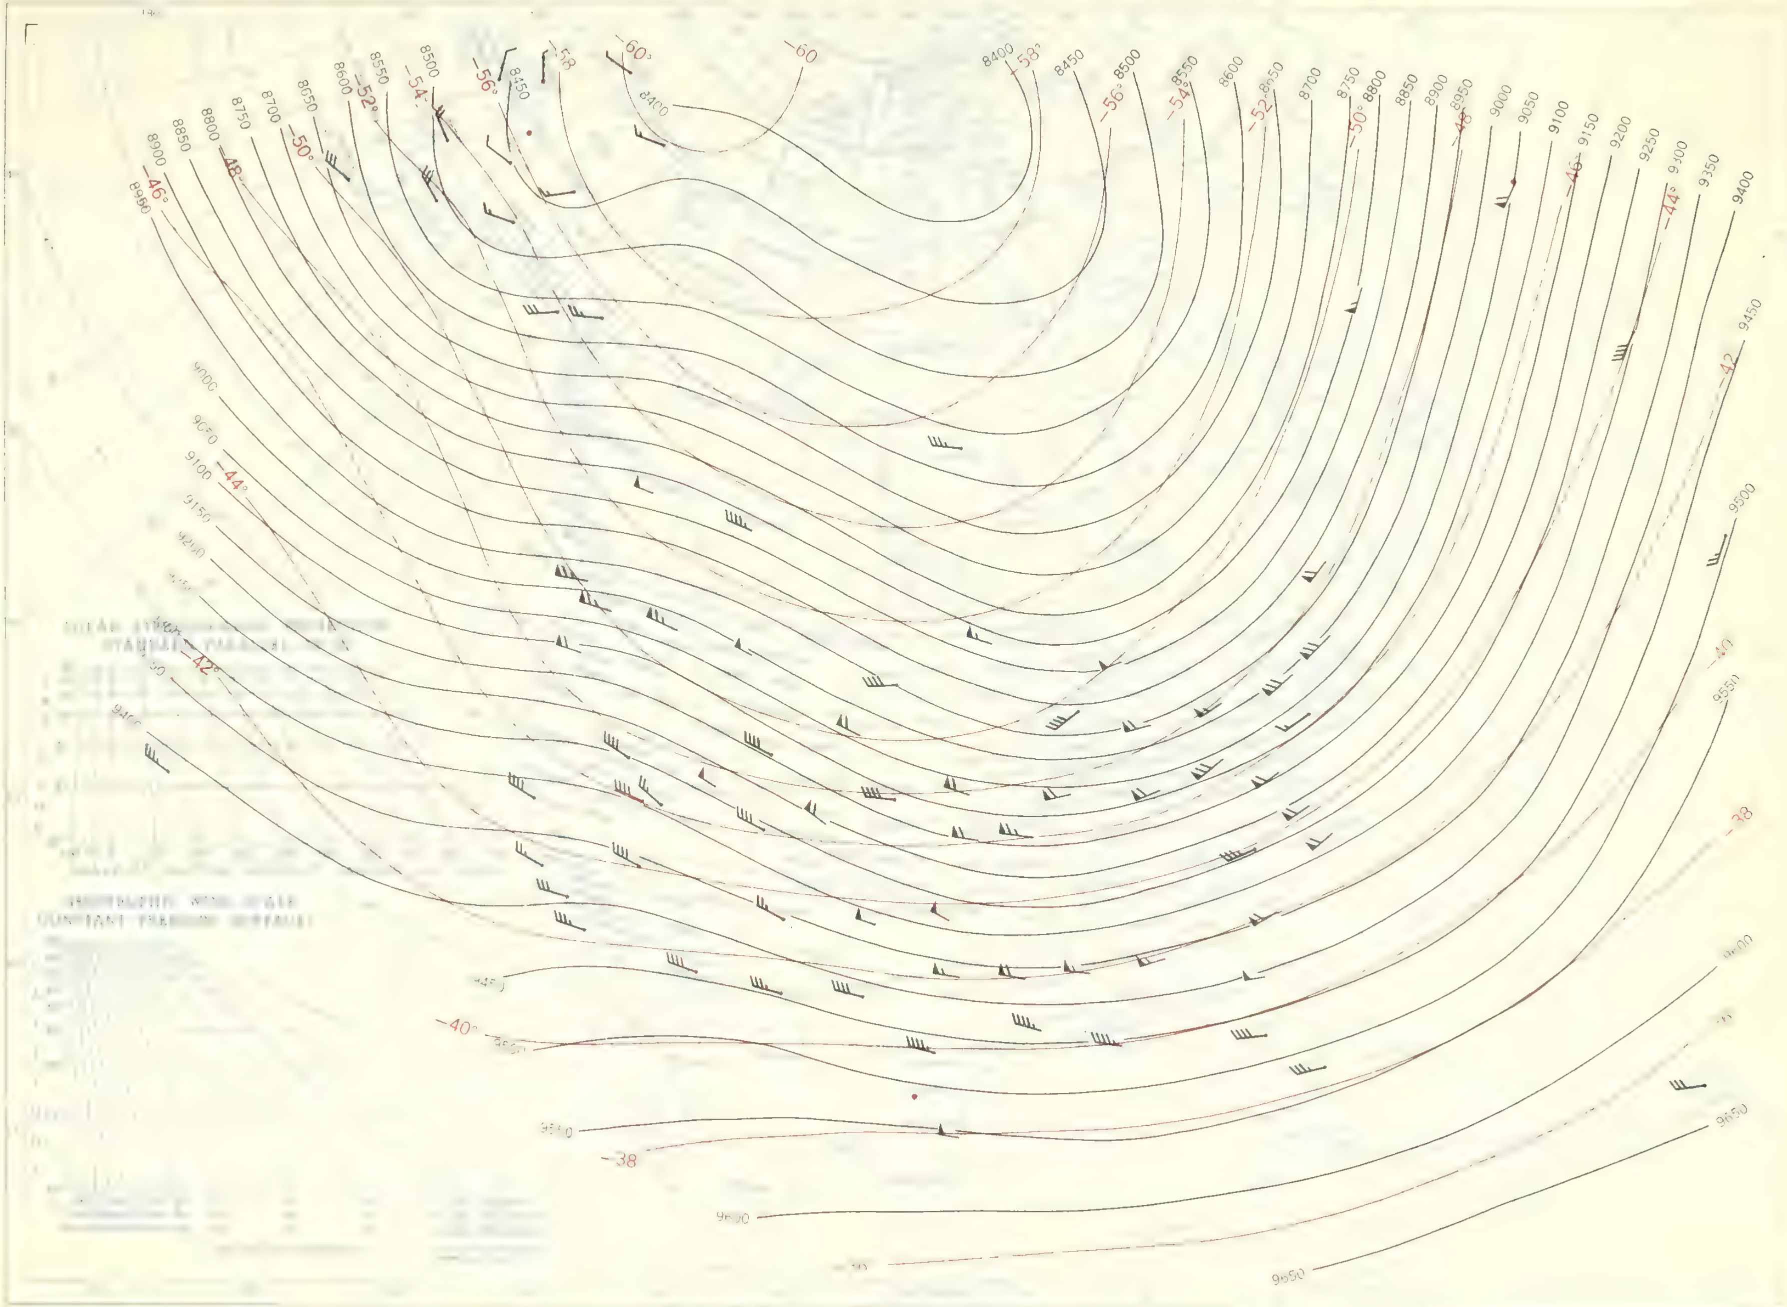
See Chart XII for explanation of map.

Chart XIV. 500-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



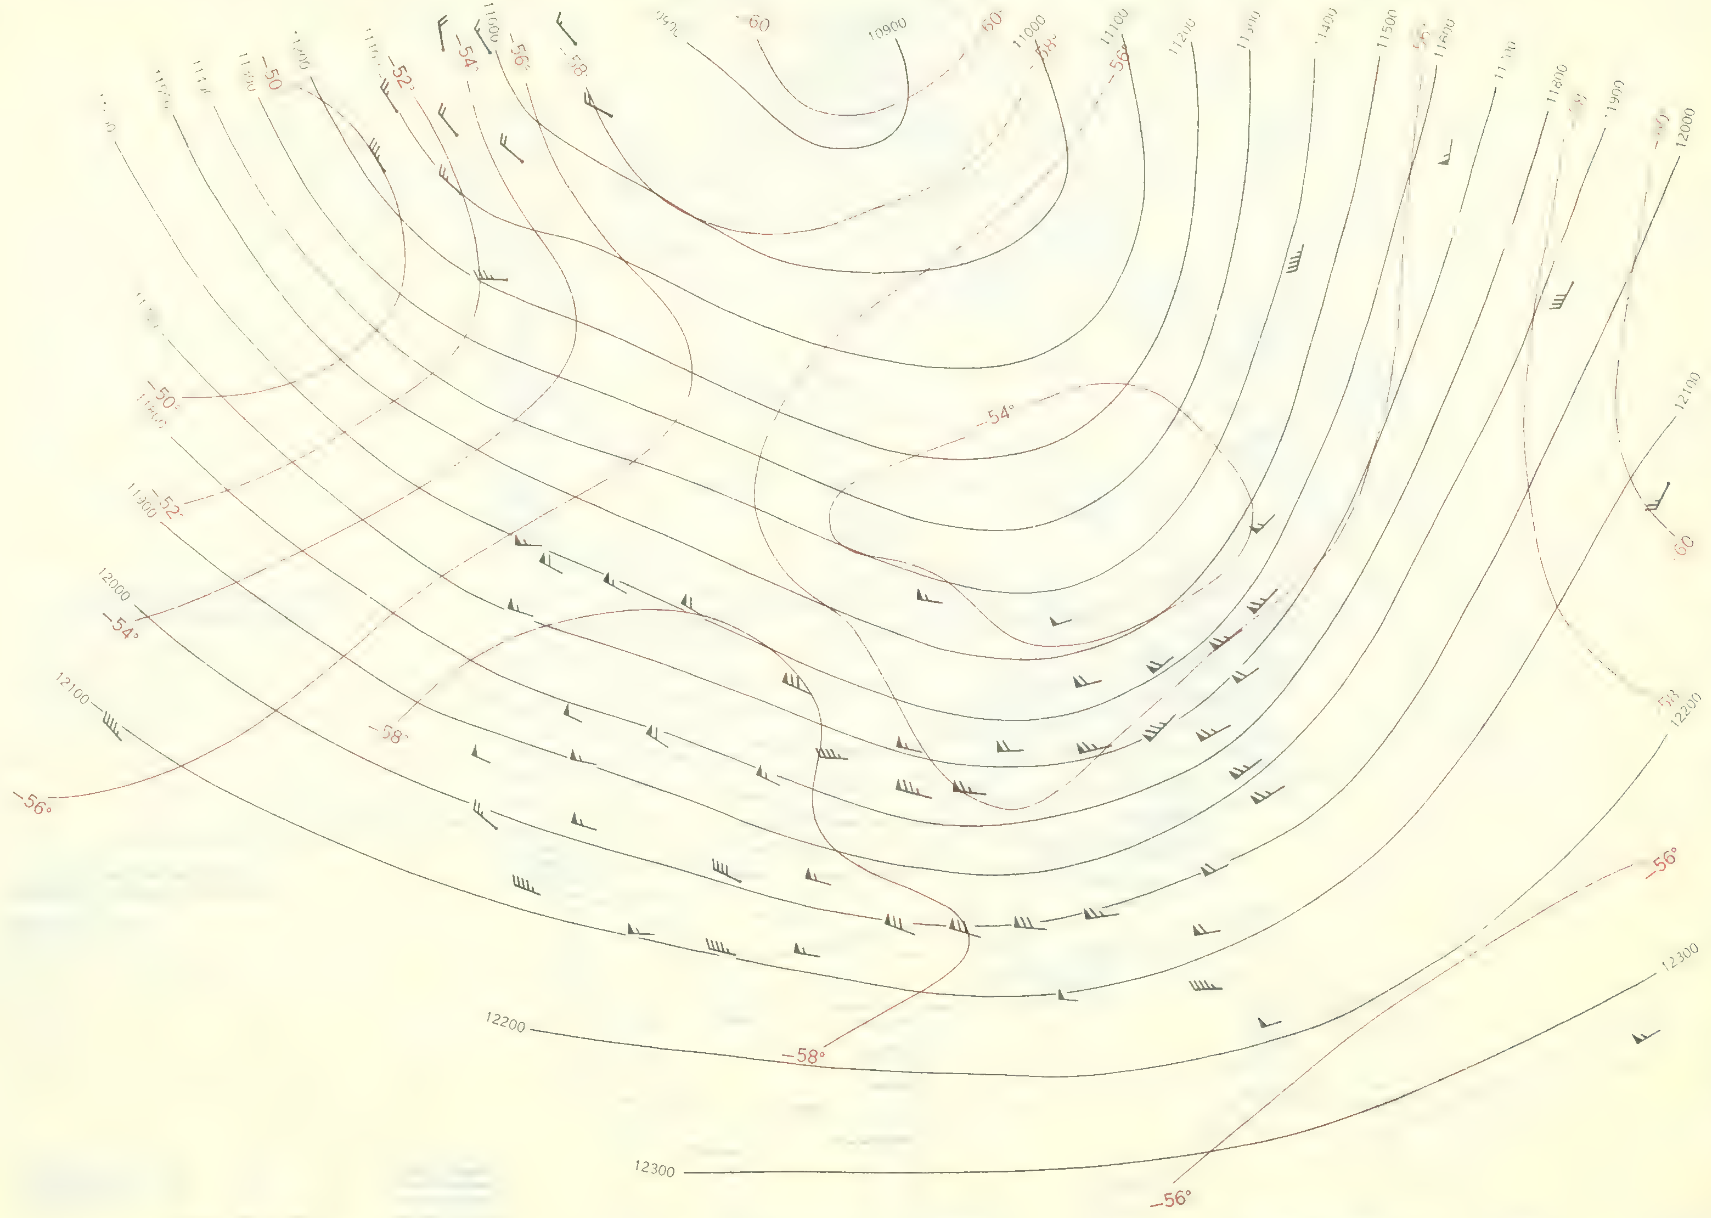
See Chart XII for explanation of map.

Chart XV. 300-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



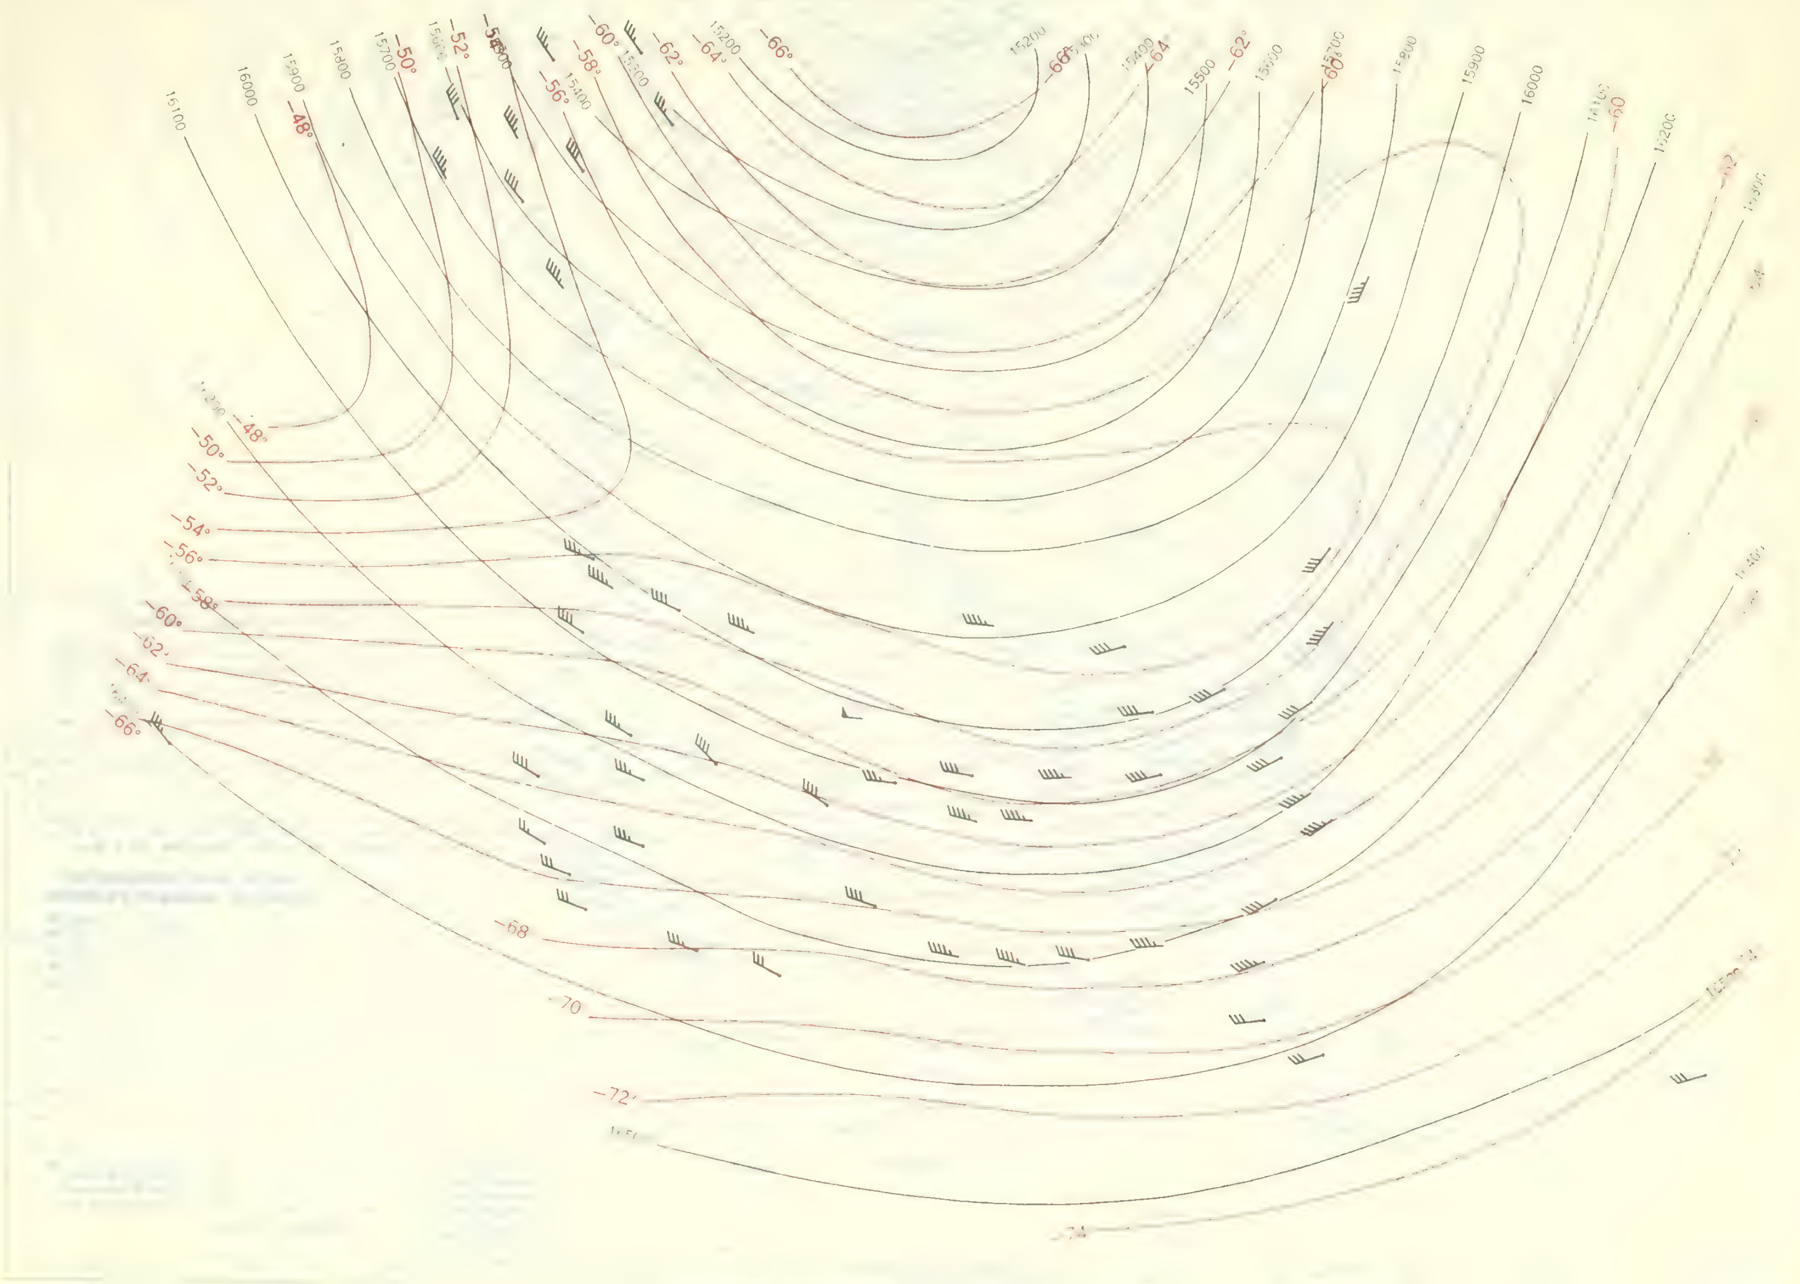
See Chart XII for explanation of map.

Chart XVI. 200-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

Chart XVII. 100-mb. Surface, 1200 GMT, December 1957. Average Height and Temperature, and Resultant Winds.



See Chart XII for explanation of map.

CLIMATOLOGICAL DATA

NATIONAL SUMMARY

Volume 8 No. 13 ANNUAL 1957

GENERAL SUMMARY OF WEATHER CONDITIONS

Compiled by L. H. Seamon
U. S. Weather Bureau, Washington, D. C.

GENERAL

Wet weather in the central and lower Great Plains and Far Southwest, areas where disastrous drought in 1956 climaxed a 5- to 7-year dry period, was the outstanding feature of 1957. The blessings of rain were marred locally, however, by damaging floods and destructive storms.

Drought left the Plains and Southwest only to reappear in the Northeast where hot, dry weather during summer and early autumn cut crop production, created a high fire hazard several times, and reduced many municipal water supplies to the extent that drastic restrictions were necessary.

With adequate precipitation outside the Northeast, the absence of any widespread destructive freezes in spring and autumn, and generally favorable temperatures during the growing season, total crop production was next to the highest on record.

Severe storms took their usual toll. The most destructive single storm was Audrey, the only hurricane to enter the mainland of the United States during 1957. Tornadoes were again reported in record-breaking numbers, but fortunately deaths and losses were less than in some other years. The blizzard or snowstorm in the Southwest on March 22-25 was the worst winter storm. Hail damage was less than usual.

PRECIPITATION.--Precipitation for 1957 was well above normal in most of the nation. Deficiencies resulting in serious drought occurred only in the Northeast, particularly along the north Atlantic coast.

Deficiencies for the year ranged up to 25 percent in the Northeast, and several stations had their driest year on record, including Trenton, N. J., 28.79 inches and Hartford, Conn., 32.26 inches. In contrast, excesses for the year ranged up to 50 percent or more in the lower two-thirds of the area from the Rocky Mountain region to the Appalachians and in some sections of the Southeast. The following stations reported their greatest annual precipitation on record: Grand Junction, Colo., 15.69 inches; Lander, Wyo., 21.89; Cairo, Ill., 72.98; Shreveport, La., 67.23; Memphis, Tenn., 76.85; and Knoxville, Tenn., 61.49. Many other stations from the central Rockies to the lower Appalachians reported their wettest year on record. 1957 was much the wettest year on record in Arkansas, with 22 stations reporting new annual records and Newhope measuring 98.55 inches for the greatest annual total ever reported in Arkansas.

At the end of 1956 severe drought extended from the middle Mississippi Basin through the central and lower Great Plains into the Far Southwest, and moisture was needed in California, southern Georgia, and most of Florida.

January precipitation replenished topsoil moisture in California and the southeastern Great Plains and eased the drought in Utah, southwestern Colorado, western New Mexico, and in Arizona. In most of the latter State streamflow was above normal at the end of the month. Heavy rains in southeastern Kentucky and nearby areas of the Virginias during the last 10 days of the month caused the worst floods at some points in nearly 100 years. Damage was in the millions of dollars. February rains brought further drought relief to Texas and Oklahoma, and beneficial amounts fell in Florida's citrus belt, but more was still needed in northern Florida and southern Georgia. Spring precipitation was above normal all over the country. March was especially wet in the central and lower Great Plains where some streams were flowing again for the first time in months, and topsoil was either replenished or greatly improved. Heavy rains in the Pacific Northwest improved ranges but caused some flooding in western Oregon. Heavy rains in April again soaked the Great Plains, and widespread floods occurred in Texas the last 10 days of the month. During May, another wet month except in some northern and eastern sections, floods occurred in Texas, Oklahoma, Arkansas, and south-central Kansas. By the end of May, moisture was adequate to excessive in the 1956 drought area and adequate elsewhere except in the Northeast.

Summer rainfall, spotty as usual, generally was adequate for growing crops except in the Northeast. Heavy June rains in the midcontinent area caused near record floods along several streams in the central Great Plains and in the upper Mississippi Basin, and prolonged flooding along the Red River in Louisiana. Late in June thousands of acres of crops were damaged or destroyed by floods along the Sioux and Vermillion Rivers in South Dakota, and up to 11 inches of rain from eastern Kansas to central Indiana caused more flooding and additional property and crop losses.

In early July the most damaging flood of record occurred along the Wabash and White Rivers in Indiana. On the 12th and 13th of July 6 to 10 inches of rain in the Chicago area caused the loss of 9 lives and heavy property losses. Numerous flash floods occurred during the second week of July in a belt extending from Kansas to Michigan. Texas and Oklahoma had very little rain in July and August, which was in great contrast to heavy rains of the 3 previous months, and both States needed more rain at the end of the summer. August rainfall was light in most of the country, but heavy amounts were recorded in the upper Mississippi Valley, parts of the Great Lakes region, Nebraska, and parts of the Rocky Mountain region. Dry, hot weather during August caused some crop decline in Kansas and Missouri.

Autumn precipitation was heavier than normal in most of the country. September was particularly wet in Oregon and northern California, the eastern Great Plains, and the South. Rainfall in the South totaled up to 20 inches or more and set several new records. Tropical storms contributed much to the total rainfall in the South during September, Debbie on the 7th bringing up to 9 inches to northwestern Florida and 2 to 4 inches to nearby areas and Esther, September 18-19, producing up to 5 inches or more from southeastern Louisiana to northern Florida. October precipitation was unusually heavy in parts of Texas and most of the Far West. It was one of the wettest Octobers on record in the Far Southwest. Heavy rains caused serious flooding in central Texas on October 12, and along most streams of the State's Gulf drainage area during the third week. November was unusually wet in the western Great Plains, the South, the upper Mississippi Valley, and Maine. Early in November more floods occurred in Texas, and during the third week widespread flooding occurred from Texas eastward and in the lower Ohio River drainage basin. Wet weather delayed cotton and corn harvests in the South and Midwest.

December was wet in the Northeast, the Ohio and middle Mississippi Valleys, the Great Lakes region, Oregon, and extreme southern Florida, but the month's precipitation was below normal elsewhere.

NORTHEASTERN DROUGHT.--The northeastern drought, serious during the growing season along the coast from southern Maryland to southern New England, began in January and did not completely end until December. Precipitation in this coastal area was only about 50 percent of normal for January, February, and March.

April precipitation was above normal owing to generous rainfall the first half of the month, but much above normal temperatures and almost no precipitation at all the second half created a high forest fire hazard in New England with numerous fires occurring in Massachusetts, New Hampshire, and Maine.

Although rains on May 14 and 15 relieved the fire hazard in New England and monthly totals were above normal in some interior sections, May rains were less than 50 percent of normal from southern New England to Virginia with some sections experiencing drought by the end of the month. Rains on June 6 and 7 furnished some relief to developing drought conditions in Maryland and Virginia, but the month's rainfall was only 50 percent of normal or less in New Jersey, extreme southeastern New York, and southern New England.

July rainfall generally was less than 50 percent of normal from southern New England to the Carolinas, and severe drought gripped Rhode Island, southeastern Massachusetts, parts of Connecticut, New Jersey, extreme southeastern Pennsylvania, Delaware, central and eastern Maryland, and much of eastern Virginia. In the lower Appalachian region where July rainfall also was less than 50 percent of normal, signs of drought were showing up. The dry spell continued until August 25-26. Rains at that time improved pastures and furnished sufficient moisture for fall seeding, but came too late to help many crops.

Good rains fell in most of the East during September, but they were too light from southern Maryland northward to bring more than slight relief. At Providence, R. I., the period January through September with only 17.71 inches of precipitation was the driest such period there since earliest records in 1832. The last week of September was almost rainless, and the forest fire hazard again became high in New England where numerous woods and brush fires were reported. In some parts of New England streamflow and ground water levels were unusually low and many wells dry. Soil moisture was short in nearly all sections of southern New England, and pastures were declining rapidly at the end of the month. Early October rains relieved the forest fire hazard, and monthly totals, normal or above, were sufficient to improve topsoil moisture; but, wells and streams remained low. November moisture, above normal along the coast and totaling 2 to over 4 inches either replenished or maintained ample topsoil moisture, but water shortages remained serious in some sections.

December rains, well above normal throughout the Northeast with totals ranging from 3 to 12 inches, further improved soil moisture and replenished water supplies that had been short since May in some sections. In New Jersey reservoir levels were raised 10 to 14 feet.

SNOWFALL.--In January many stations in the central Valley and along the central and southern coast of California had some snowfall for the first time in many years. Monthly totals were much above normal in the Rocky Mountains and Northeast.

February snowfall was much below normal nearly everywhere. March snowfall, below normal in most areas, was notable mainly for some heavy falls in the northern Great Plains and upper Mississippi Basin during a blizzard on the 14th and 15th, and near record amounts in the southwestern Great Plains from the 22d through the 25th. April snowfall was unusually heavy in most northern areas between the Rocky Mountains and the Appalachians.

Some unusually early snows fell in central areas during October, and on November 17 to 19 heavy falls were recorded from the southwestern Great Plains to the upper Mississippi Valley. December snowfall was below normal.

TEMPERATURE.--Areas with average temperatures above and below normal for the year were about equal, with extreme departures ranging from 2° or more above in the Northeast to 2° or more below in the central Great Plains.

January weather in much of the North was the coldest in many years and greatly reduced the peach crop in the Northeast and Pacific Northwest. The following February was abnormally mild in virtually the entire Nation, with average temperatures the highest of record in the Far Southwest while monthly maxima set new records at many stations from Yuma, Ariz., to Jacksonville, Fla., and northward to Columbus, Ohio, and Wilmington, Del.

Spring (March, April, May) temperatures averaged about normal, although April was relatively cool in the western Plains. During a cold snap from March 6 to 11, freezing extended into the Florida Everglades and caused some local crop damage. On April 7-15, another cold period, temperatures fell to record low levels for the season in the lower Great Plains where 30° recorded at Fort Worth, Tex., on the 13th was the latest freeze and lowest temperature ever recorded there in April. East of the Rockies summer heat prevailed during the latter half of the month. A freeze on May 17 in the Northeast caused some local crop damage.

Average summer temperatures were relatively cool in the Pacific Northwest and Great Basin, but unusually hot in the drought area along the northeastern coast. In the latter area temperatures occasionally neared record highs in June and July.

Autumn temperatures averaged above normal in the Northeast and along the west coast and below in most of the remainder of the country. October was relatively cool nearly everywhere, and a cold snap from the 24th to the 29th reduced temperatures to record low levels for the season in many southern areas east of the Rockies where some stations reported their first freeze of the season about a month earlier than normal. November was among the coldest such months of record in Texas and the Great Basin. Elsewhere, temperatures averaged about normal for the month, but were characterized by frequent and sometimes sharp changes.

December was relatively mild except in Florida where average temperatures were slightly below normal. It was among the mildest Decembers on record in northern areas. Nevertheless, a major outbreak of cold air on the 10th to the 13th brought freezing deep into the South, and low readings in Florida on the 12th and 13th, approximating those of December 1934 and January 1940, caused extensive crop damage.

STORMS AND UNUSUAL WEATHER PHENOMENA

TORNADOES.--These storms, setting new records for the greatest number in a single year (924) and for a single month (May, 230), accounted for 191 deaths, and about $75 million damage.

Major outbreaks occurred as follows:

Southern regions.--January 22; April 1-8, 21-25; June 8 and 28; October 15-16; November 7.
Midwest.--May 14; December 18.
North-central regions.--May 20; June 13-14 and 20.
Northeast.--June 18-19.

The year's worst tornado moved through the Kansas City, Mo., suburbs on May 20, killing at least a score of persons, injuring nearly 200, and damaging property to the extent of millions of dollars. Other well known cities hit during the year included Dallas and Austin, Tex., Springfield, Ill., and Fargo, N. Dak. The Fargo tornado, described as the worst in the history of North Dakota, killed 10, injured over 100, and destroyed property valued in millions of dollars on June 20.

HURRICANES.--Only one of these storms entered the mainland of the United States. Audrey, on June 27-29, moved from southwestern Louisiana to Lake Ontario, but lost hurricane strength soon after leaving Mississippi. Deaths totaled 390 and property losses over $150 million. An article on North Atlantic Tropical Storms appears in this publication.

HAIL.--Losses were about $62 million, the least since 1953. Hail caused damage in the neighborhood of a million dollars on August 2 at Cheyenne, Wyo.

Wind and hail in the Northern Great Plains and upper Mississippi Valley on July 2-4 were responsible for property and crop losses of millions of dollars. In western South Dakota at 8 p.m. on July 2, hailstones up to 16 inches in circumference were reported and a few young livestock were killed. In the extreme southeastern part of the same State from 11 p.m. of the 3d to 1 a.m. of the 4th, one of the most destructive hailstorms in the history of the State devastated an area 8 miles wide from Freeman, S. Dak., to Hawarden, Iowa; stones reached baseball size, cattle were bruised, several hogs killed, and bark stripped from trees.

SHOWER OF FROGS AND FISH.--This latest phenomenon occurred at Magnolia Terminal near Thomasville, Ala., according to a story in the "Thomasville Times" of that city on the 3d of July 1957. The story related that little fish fell by the thousands on Friday morning, the 28th of June 1957, during a rainstorm. The fish, many still alive, were found between crossties on the railroad tracks, and residents filled containers with bass, bluegill, bream, and other species. Some crayfish and tiny frogs also fell. The story was confirmed by reliable observers. A tornado, suspected to have occurred in southwestern Alabama before 8 a.m., the 28th, may have been responsible for the event. The above account is the latest documented testimony to these rare phenomena.

INJURY BY HAIL.--On the 23d of June 1957, a few miles west of Fort Stockton, Tex., 21 persons caught without shelter were injured by hailstones ranging up to baseball size.

BLIZZARDS.--The most destructive storm of this type occurred March 22-25 in the western Great Plains from Wyoming to New Mexico. This storm, reaching blizzard proportions in many sections, was among the worst on record for so late in the season. It took a heavy toll of livestock, and damaged power and communication lines.

Another blizzard occurred in eastern and south-central Colorado on April 1-2 when up to 50 inches of snow fell in the mountains, causing hundreds of thousands of dollars damage.

WINDS OTHER THAN HURRICANES AND TORNADOES.--These winds were responsible for about 200 deaths and property damage of more than $40 million. On November 21-22, Santa Ana winds in southern California were responsible for hundreds of thousands of dollars damage and for brush fires spreading over 28,000 acres.

EXCESSIVE PRECIPITATION

(Excessive Short Duration Rainfall)

YEAR 1957

This table contains statistics of maximum amounts of rainfall during the calendar year 1957. Data presented in this table are generally from stations equipped with recording gages. Stations are at City Office locations unless otherwise shown.

Excessive precipitation data for the years 1896-1935 inclusive, generally present the accumulated amounts of precipitation for each 5, 10, or 20 minute intervals during storms in which the rate of fall equaled or exceeded .25 inch in any 5 minute period, or .30 in any 10 minute period, or .35 in any 15 minute period, etc., the tabulation beginning with the 5 minute period where the rate of .05 inch in 5 minutes began and continuing by 10 or 20 minute intervals up to 120 minutes. A detailed explanation of the method used may be found in the publications listed in the last paragraph of this explanation.

The present method, adopted with data for the calendar year 1936, gives the maximum fall of precipitation for the periods 5 to 180 minutes, the maximum amounts being taken for the periods in which the fall is greatest for the given time, and is tabulated to show maximum amounts for 5, 10, 15, 20, 30, 45, 60, 80, 100, 120, 150 and 180 minutes, even if the fall does not equal the excessive rate for some of the periods. (The 15 minute amount was not computed for 1936-43 and the 150 minute amount was not computed for 1944 through 1948).

The following Table A shows limits at which precipitation was considered excessive in this publication:

TABLE A

Duration (minutes)	Depth of precipitation (inches)	Duration (minutes)	Depth of precipitation (inches)
5	.25	60	.80
10	.30	80	1.00
15	.35	100	1.20
20	.40	120	1.40
30	.50	150	1.70
45	.65	180	2.00

This table is made up from the formula, A = t + 20 where A is the accumulated depth in hundredths of inches and t is the time in minutes.

For the years 1936 through 1948 stations in North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Arkansas, Louisiana, Texas, Oklahoma, and San Juan, P. R. used the limits shown in the following Table B:

TABLE B

Duration (minutes)	Depth of precipitation (inches)	Duration (minutes)	Depth of precipitation (inches)
5	.40	60	1.50
10	.50	80	1.90
15	.60	100	2.30
20	.70	120	2.70
30	.90	150	3.30
45	1.20	180	3.90

This table is made up from the formula A = 2t + 30. Its use, however, was discontinued at the end of 1948 and Table A is used by all sections for 1949 and the following years.

Publication of Data. A summary of maximum precipitation data for the years prior to 1896 is published in the annual report of the Chief of the Weather Bureau for 1895-1896. Excessive precipitation data for the period 1881-1896 are published in the annual report of the Chief of the Weather Bureau 1896-1897. Data for the years 1897 through 1934 have been published in the appropriate annual reports of the Chief of the Weather Bureau. For the years 1935 through 1949 these data are published in the appropriate issue of the United States Meteorological Yearbook. For 1950 and succeeding years excessive precipitation are presented in the annual issues of the Climatological Data, National Summary.

Data from airport unless otherwise indicated

U indicates Urban, R indicates Rural sites. Where certain elements are from the airport, these are indicated by AP above each value.

- * Data entered in column headed "Fastest Mile" is the fastest observed one minute wind speed and its direction. This station is not equipped with automatic recording wind instruments
- + Also on earlier dates.
- • Wind direction to 8 compass points only.
- ‡ Peak gust

- # Number of days maximum 70 F or above for Alaskan stations.
- a Computed as of midnight local time.
- b Computed as of noon local time.
- c Sun below horizon November 18 - January 24.
- d Maximum hourly average.
- e Computed as of 8 00 am local time.
- k Sun below horizon November 26 - January 16.

NORMALS, MEANS AND EXTREMES

State and Station	Elevation ground (feet)	Temperature (°F) Normal (1921-1950) January Daily maximum	Temperature Normal January Daily minimum	Temperature Normal July Daily maximum	Temperature Normal July Daily minimum	Temperature Normal Annual	Temperature Extremes Length, yrs.	Temperature Extremes Record highest	Temperature Extremes Record lowest	Normal degree days (1921-1950) January	Normal degree days Seasonal	Precipitation (inches) Normal (1921-1950) Wettest month	Precipitation Normal Driest month	Precipitation Normal Annual	Precipitation Extremes Wettest month	Precipitation Extremes Driest month	Precipitation Extremes Maximum in 24 hours	Snow, Sleet Mean total January	Snow, Sleet Mean total Seasonal	Snow, Sleet Extreme Maximum in 24 hours	Relative humidity (percent) January 7:00 a.m. EST	Relative humidity January 1:00 p.m. EST	Relative humidity January 7:00 p.m. EST	Relative humidity July 7:00 a.m. EST	Relative humidity July 1:00 p.m. EST	Relative humidity July 7:00 p.m. EST	Wind Speed (m.p.h.) Mean hourly January	Wind Speed Mean hourly July	Wind Speed Fastest mile	Sunshine (percent of possible) January	Sunshine July	Annual mean number of days Sunrise to sunset Clear	Sunrise to sunset Partly cloudy	Sunrise to sunset Cloudy	Precipitation .01 inch or more	Snow, sleet, hail 1.0 inch or more	Thunderstorms	Heavy fog	Temperature Max. 90° and above	Temperature Max. 32° and below	Temperature Min. Zero and below

Data from airport or from airport and Urban site records combined.
U indicates Urban, R indicates Rural sites.
Data for this table are based on records through 1957 except as indicated in notes.
Date in Parenthesis after station name indicates last year included in summarization of data.
Normal values are based on the period 1921-1950, and are means adjusted to represent observations taken at the present standard location.

Degree days are based on a daily average of 65°F.
Fastest mile is the speed of the wind recorded in the shortest time on an automatic recording wind instrument.
a clear day averages 0-3 tenths sky cover, partly cloudy 4-7 tenths and cloudy 8-10 tenths.
Heavy fog includes data formerly referred to as "Dense" or "Thick." The upper visibility limit for heavy fog is 1/4 mile.
* Less than one half

These are the elevations to which station pressure values in Table 2, monthly Climatological Data, National Summary, pertain. They are the elevations (in feet above mean sea level) of the barometer as of January 1, 1900, or at the time of establishment of station subsequent to that date. Average monthly station pressures continue to be reduced to these elevations to provide homogeneity of data over a long period of time.

GENERAL SUMMARY OF TORNADOES—1957

By L. V. Wolford
U. S. Weather Bureau
Washington D. C.

More tornadoes were reported in 1957 than in any previous year during the 42-year period of tabulation of these storms by the Weather Bureau, and property damage was high, but the loss of life was moderate. A total of 924 of these storms (851 tornadoes and 73 waterspouts) touched the ground or water surface on 175 days, causing property damage estimated at about $75 million, 191 deaths, and 2,343 personal injuries. Also, 772 funnel clouds aloft and 46 dust devils were reported during the year. These are not included in this discussion, but are presented in separate tabulations at the end of this article. The estimated amount of property damage has been exceeded only once (in 1953) during the period 1916 to 1957. The death toll of 191, however, was not high, considering the number of tornadoes which occurred during the year. This no doubt is due to progress in tornado forecasting and public alertness and cooperation. In 18 previous years, the death toll has been greater than in 1957.

We wish to emphasize that it is impractical to make an accurate comparison of tornado data with that of previous years, principally the number of tornadoes, tornado days, and property damage, because of the increased alertness and general interest in these storms, advances in observational and forecasting technique, and changes in the monetary value of property.

Of the 851 tornadoes, 91 passed over open country or touched the ground momentarily causing no damage, and of the 73 waterspouts, 69 resulted in no damage; thus leaving a total of 760 damaging tornadoes and 4 damaging waterspouts. In the following discussion, waterspouts are included with the tornadoes. Details can be obtained from the accompanying tabulations.

Five of the 1957 tornadoes crossed states' boundaries, two of which were among the most disastrous of the year in regard to the estimated property losses. On May 20, the tornado which originated near Williamsburg, Kans., and moved to the Ruskin Heights area in Missouri resulted in losses of 44 lives and property damage estimated at millions of dollars. On June 20, the Fargo, N. Dak., to Moorhead, Minn., tornado caused 10 deaths and $10 to $15 million damage. The South Carolina-North Carolina storm on April 8 caused property losses of over $2 million and 4 fatalities. Another boundary-crossing tornado occurred on November 17 in Mississippi and Alabama and resulted in a loss of 2 lives and property damage of about $60 thousand. The final boundary-crossing storm on May 20 caused only negligible damage in Colorado and Kansas.

Tornadoes were reported during each month of the year. May exceeded all other months with 230 occurrences, followed by April with 217 and June with 164. July recorded the fourth highest total of 67. Sixty-five occurred in November, 39 in March and December each, 36 in August, 22 in September and October each, 18 in January, and 5 in February for the least number of the year. The total of 39 tornadoes in December was the largest number reported in that month during the 42-year period, and was also unusual in that 21 twisters were reported in Illinois and 7 in Missouri where they rarely occur at that time of the year. In only four previous years has Illinois been visited by December tornadoes and in only two previous years have tornadoes been reported in Missouri in that month. Tornadoes were particularly active on May 20 when 37, the greatest number of the year for a single day, were reported. These storms were also numerous on April 22 and April 2, with 32 and 29 occurrences, respectively.

Forty-five states and the Territory of Hawaii experienced tornadic storms during 1957. Over one-third of the year's total occurred in the three states of Texas, Oklahoma, and Kansas. Texas reported 162, Oklahoma 106, and Kansas 64 tornadoes. Connecticut, Idaho, Montana, New Jersey, New York, Utah, West Virginia, and the Territory of Hawaii each had one occurrence, and the District of Columbia, Maryland, Nevada, Rhode Island, Alaska, and the West Indies reported none.

The loss of 191 lives resulted from tornadoes in 17 states. Eighty-seven of these fatalities occurred on 6 days in May for the greatest number of any month in the year. Forty-four, the most deaths on a single day, were caused by the disastrous Kansas-Missouri tornado on May 20. The Silverton, Tex., tornado on May 15 accounted for 21 deaths, the second highest toll for a single day. Another death occurred on the 15th in Texas, making a total of 22 for that date, and on the 21st, 15 deaths were reported in Missouri. April recorded the next highest monthly death toll of 29, 17 of which resulted from tornadoes on the 2d in Oklahoma and Texas. November had the third highest total of 25, with 14 reported on the 7th. Of the December total of 18, 16 persons were killed on the 18th in Illinois and Missouri. The Fargo, N. Dak.,-Moorhead, Minn., tornado of June 20 was responsible for 10 of the 14 deaths reported during June. The total of 13 in January all occurred on the 22d in Oklahoma and Louisiana. September and October each reported two deaths, March one, and February, July, and August no loss of life. Missouri had the highest death toll of 55 during the year, 52 in May and 3 in December. Texas reported the second greatest total of 37, followed by Oklahoma with 22.

The greatest amount of property damage of over $18 million occurred during June, followed closely by about $17 million in April, and $16 million in May. Damages during January, July, November, and December were also well over the $1 million mark. During the remaining 5 months, losses ranged from $5 thousand in February to over $700 thousand in September. Nineteen tornadoes in 13 states caused property damage of $1 million or over. Total yearly losses of over $10 million were reported in Texas, Missouri, and North Dakota. Two of the most destructive tornadoes of the year, from a monetary standpoint, were the boundary-crossing ones in Kansas and Missouri on May 20 and in Minnesota-North Dakota on June 20, with losses estimated at millions of dollars in the former and $10 to $15 million in the latter storm. On May 21, a tornado in Missouri caused death to 8 persons, injuries to 50 others, and property damage of $5 to $10 million. In Texas, the Dallas tornado on April 2 resulted in $4 million damage, 10 fatalities, and 200 injuries. Eleven persons lost their lives, 200 were injured, and property damage estimates exceeded $4 million in an Illinois twister on December 18. Another Illinois storm caused damage of $3 million, death to 2 persons, and injuries to 50 others on June 14. Losses of slightly over $2 million to property occurred from two other tornadoes, the April 8 boundary-crossing one in the Carolinas and the November 7 twister at Groves, Tex. Eleven other tornadoes caused losses of $1 million or over in 9 states.

Tornado paths during 1957 averaged about 11-1/2 miles in length and 209 yards in width. Data concerning the distance traveled were reported on 504 of the year's tornadoes. Seventy-three percent moved over paths of less than 10 miles. The remaining 27 percent, or 137 tornadoes, traveled more than 10 miles, 4 of which moved for distances of 100 miles or over. The longest reported path during the year was 150 miles in Iowa on July 4. On April 8, a tornado passed through 3 counties in South Carolina, crossed into North Carolina where it moved through 4 counties for a distance of 115 miles. Two other tornadoes, both occurring in May, traveled for about 100 miles. The Missouri storm on the 22d appears to have remained on the ground for the entire distance, while on the 20th the tornado which originated in Colorado and passed into Kansas lifted and dipped several times along its path. Three tornadoes in Indiana, traveling for only one-tenth of a mile each, were the shortest reported paths of the year. Tracks of the 1957 tornadoes are presented at the end of this publication.

Of the 908 tornadoes on which the time of occurrence was given, 710 or about 78 percent were reported between noon and midnight, and 198 or 22 percent between midnight and noon. Eleven percent were between 5 and 6 p.m., for the hour of greatest occurrence, followed closely by 9 percent for each hour between 2 and 5 p.m. The least number of 9 or about 1 percent was reported between 7 and 8 a.m. It is interesting to note that tornadoes occur more frequently in the morning hours in the Southern States than elsewhere in the country. Slightly less than 50 percent in each of the states of Alabama, Arkansas, Mississippi, South Carolina, and Virginia and about 33 percent of those in Georgia, Oklahoma, Tennessee, and Texas were reported between midnight and noon.

As usual, the greater portion of the 1957 tornadoes moved from the southwest to the northeast, with about 61 percent traveling in that direction. Sixteen percent came from the west and 7 percent from the northwest, making about 84 percent from a general westerly direction. See the tornado rose for 1957 presented in figure 1 and the chart of tornado tracks shown in the back of this publication.

ALABAMA										
1. Jan. 22	10 p.m.	Dallas	(a)	(b)	(c)	0	0	3	1	At Summerfield, suspected tornado. Sudden and very brief onrush of wind demolished 2 chickenhouses in yard and blew heavy 8-inch creosoted timber through fence.
2. Feb. 1	Evening	Houston	(a)	(b)	(c)	0	0	2	1	At Dothan, building in backyard destroyed, with no other damage such as TV antennas nor surrounding trees. Struck with "roar like air planes."
3. Mar. 31	11:30 p.m.	Mobile	N	1	70	0	4	4	1	Storm occurred 6 miles southwest of center of Mobile.
4. Mar. 31	11:30 p.m.	Mobile	(a)	(a)	(a)	0	0	1	1	Waterspout reported in swamp north of Mobile Bay. It was well to right of projected path of tornado at that time which occurred southwest of Mobile. Since there could have been error in estimating distance away of formations observed by light of occasional lightning, it could have been either the tornado which occurred southwest of Mobile or separate storm.
5. Apr. 7	11:45 p.m.	Franklin	NE	(a)	(a)	0	0	4	1	Suspected tornado. $12,000 damage in Red Bay and remainder of damage between Red Bay and Mississippi.
6. Apr. 8	9:46 a.m.	Marion and Lawrence	ENE	55	100	0	5	5	1	Path skipping. However, 2 long continuous stretches reported. 8-mile long path beginning just south of Hamilton, lifted and hit in Bankhead Forest for 14-mile long path, ending at Pine Grove, Lawrence County. Scattered fallen timber in forest occasionally as far as 1/4 mile from center of path. Of total damage, $150,000 to timber.
7. Apr. 8	10:15 a.m.	Morgan and Marshall	ENE	35	40-200	2	90	6	1	Number of injured include persons injured in tornado also in Cullman County on same date. Tornado began 6 miles southwest of Falkville and ended about 10 miles north of Arab, Marshall County. Funnel said to have lashed from side to side, making somewhat zigzag path and varying the width. Some skipping in path.
8. Apr. 8	10:30 a.m.	Cullman, Marshall, and Morgan	ENE	15	(a)	0	(a)	5	1	Storm moved from northeastern Cullman County into Marshall County across southeastern corner of Morgan County at Hulaco and ended after hitting at Union Chapel, southeast of Union Grove. Path shipping. Persons injured in this storm included in number for storm #7 above. It was not possible to ascertain accurately division of damage between these last 2 tornadoes because of news and other reports lumping data.
9. May 10	7:45 p.m.	Henry	(a)	(b)	(c)	0	0	3	1	Suspected tornado at Headland. 1 person saw it dip near his house without touching ground, to later dip and hit another house.
10. June 28	7:30 a.m.	Clarke	(a)	(a)	(a)	0	0	(a)	(a)	Suspected tornado. The Thomasville Times reported that small fish fell at Magnolia Terminal in Marengo County during shower of rain. This report was verified by Cooperative Observer at Thomasville. Crayfish and tiny frogs also part of precipitation.
11. June 28	8:30 a.m.	Clarke	NE	3	100	0	0	3	2	Skipping path touched in 7 places. On Indian Ridge Road, just east of Whatley, 2 houses severely damaged, and garage and considerable timber destroyed.
12. June 28	8:50 a.m.	Wilcox	NE	2	35-100	0	0	4	1	At Oakhill, church reduced to rubble, with furnishings not recognizable. Other damage to timber.

See reference notes at end of table.

TORNADO DATA

YEAR 1957

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
ALABAMA cont'd										
13. June 28	9:35 a.m.	Lowndes and Montgomery	NE	13	120	0	0	4	1	Path from 3 miles south of Hayneville to about 3 miles southwest of Hope Hull. Path mostly through pasture and woodland, with damage mostly to houses and barns. Man in house which was damaged beyond repair said house at time it was hit was filled and surrounded by dark mist which looked like smoke.
14. June 28	9:45 a.m.	Conecuh and Butler	NE	20	400	0	0	5	3	Tornado path skipping from 4 miles southeast of Skinnerton, Conecuh County, to about 4 miles west-southwest of Liberty, Butler County. Path variable in width, ranging up to 400 yards when in weakened condition. Worst damage 3 miles south of Butler Springs, where 7 houses destroyed.
15. June 28	9:55 a.m.	Monroe	NE	10	100	0	4	5	3	Tornado began 1 mile south of Frisco City. Skipping path ended near Bermuda. Most of damage at Excel, where 4 persons injured. Timber damage in Bermuda area about $4,000. Eyewitness living about 200 yards from path of storm at Excel, told of seeing funnel cloud pass over his house about 5 minutes before the later one hit.
16. June 28	10 a.m.	Lowndes and Montgomery	NE	25	150	0	8	5	3	Path skipping, and at times rather broad, with scattered fallen trees occasionally as far as 200 yards from center. About $60,000 of total damage was at Davenport, on Highway 331, where all the injuries occurred. Path began about 2 miles south of Fort Deposit, and ended at Sprague Junction, Montgomery County. Storm reached Sprague Junction about 11 a.m., about an hour after its beginning.
17. June 28	10:15 a.m.	Butler	NE	14	125	0	0	5	3	Tornado path began about 6 miles southwest of Greenville and ended about 6 miles east-northeast of city. Most damage to junior college just southeast of Greenville and in Knob City, south-southwest of Greenville.
18. June 28	10:25 a.m.	Conecuh	NE	10	150	0	0	4	3	Storm first sighted 4 miles west of Middleton Airport, Evergreen. Path began 5 miles west of Evergreen and passed 1-1/2 miles north of city. Path through woods and fields, on ground about 50 percent of time. House and store destroyed and barn damaged.
19. June 28	11 a.m.	Conecuh, Covington, and Butler	NE	12	200	0	2	4	3	Began in Conecuh County, passed 1-1/2 miles southwest of Brooke, Covington County, and ended near Oaky Streak, Butler County. Path skipping. About $30,000 damage in Brooke community.
20. June 28	11:50 a.m.	Crenshaw	NE	(a)	(a)	0	0	(a)	(a)	Tornado reported by Highway Patrol who followed storm moving toward Luverne. Sparsely settled, unproductive country, with damage confined to woods.
21. June 28	Morning	Conecuh	NE	1	(c)	0	0	3	1	Aerial inspection of path of tornado near Middleton Airport revealed path of this storm about 500 yards northwest of main path being tracked. This short-path storm destroyed barn and some timber.
22. June 28	Morning	Montgomery	NE	(b)	100	0	0	(d)	1	Short path of fallen trees lying in opposite directions to ones on other side of path, across U.S. Highway 331, 1 mile north of Sellers.

See reference notes at end of table.

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
ALABAMA Cont'd										
23. June 28	Morning	Montgomery	NE	5	150	0	0	3	1	Tornado crossed U.S. Highway 231, then crossed Highway 82, 4 miles west-northwest of Downing and ended about 3 miles northwest of Downing. Path through woods and pastures. House and barn destroyed. Path on ground about 75 percent of time.
24. June 28	5:45 p.m.	Barbour	NE	14	100	0	1	4	2	Tornado began about 8 miles northeast of Brundidge. Last trace of it was when it passed over Batesville without doing any damage in the community. Path skipping and over sparsely settled country. It destroyed 2 houses, 4 barns, other smaller buildings, and considerable timber. The tornadoes on June 28 associated with passage of hurricane.
25. Aug. 15	5:30 p.m.	Russell	(a)	(a)	(a)	0	0	3	1	Suspected tornado in Huguley community, 8 miles west of Phenix City. Several houses damaged. Storm called tornado by press.
26. Aug. 15	5:30 p.m.	Lee	(a)	(b)	150	0	0	3	1	Suspected tornado at Smiths community. Diagnosed as tornado by press and Highway Patrol. 2 houses damaged considerably and 2 barns destroyed. 3 power poles snapped.
27. Sept. 18	2:45 p.m.	Dallas	NNW	10	100	0	0	4	2	Tornado began along river just east of Selma and followed skipping path. 3 important short dips destroyed 3 tenant houses, damaged 3 others, and destroyed a crib. Crop damage mostly to open cotton.
28. Nov. 8	2:25 a.m.	Pickens	NE	8	(a)	0	5	5	1	Tornado path slightly northwest of Aliceville.
29. Nov. 8	4:22 a.m.	Dallas	NE	1-1/2	60-400	0	0	5	1	Storm in northwest suburbs of Selma diagnosed as tornado, although damage was by winds blowing all in same direction. Short path of fallen trees about 50 yards wide first made, followed by skip of about 1/2 mile. Second hit about 200 yards wide and about 400 yards long. Short distance further to northeast, it hit third time over path about 400 yards wide and about 500 yards long. Several hundred houses damaged, but only a few heavily damaged and none demolished. Automobile turned over and left resting on its side. Pressure jump occurred at Craig Field at 4 a.m., accompanied by drop of several degrees in temperature, and it is believed that tornado aloft managed to briefly penetrate unfavorable surface conditions to produce surface gusts on right hand side of path.
30. Nov. 8	4:30 a.m.	Shelby	NE	9	40	0	0	4	1	Tornado 2 miles northeast of Columbiana to 2 miles west of Wilsonville. Skipping path with width reported only along last 2-1/2 miles.
31. Nov. 8	Early a.m.	Tuscaloosa	(a)	(b)	(c)	0	0	2	1	Suspected tornado blew down power pole between Buhl and Coker. No estimate of damage caused by power being off.
32. Nov. 8	Early a.m.	Franklin	(a)	(b)	(c)	0	0	2	1	Suspected tornado. 5 power poles and 2 trees blown down.
*33. Nov. 17	1:10 p.m.	Lamar	NE	(a)	(a)	0	0	3	1	Brief dips at Pine Springs, near Sulligent, of tornado which hit near Gattman, Miss.
34. Nov. 17	3:12 p.m.	Walker	NE	5	3-400	4	15	4	1	Extended from 6 miles northwest of Jasper to 1 mile north of Manchester. Hail occurred ahead of tornado.

See reference notes at end of table.

ALABAMA Cont'd.										
35. Nov. 17	4:10 p.m.	Cullman	NE	8	(a)	0	3	5	4	From Trimble to Crane Hill and Bethsaida. It became wide and dissipated over Cullman, where damage scattered. Crop damage mostly to unpicked cotton.
36. Nov. 18	1:30 p.m.	Franklin	NE	8	(a)	0	0	4	1	1 house partially destroyed, and another moved on foundation at Belgreen.
37. Nov. 18	2:30 p.m.	Greene and Hale	NE	28	(a)	0	5	5	1	From Forkland, Greene County, it "plowed several miles" and lifted to strike again in Hale County, passing successively Sawyerville, near Akron, and at Havana.
38. Nov. 18	2:45 p.m.	Tuscaloosa	NE	3	(c)	0	1	4	1	Tornado path 12 miles north of Tuscaloosa.
39. Nov. 18	2:45 p.m.	Dallas	NE	35	(c)	0	0	4	1	Tornado made skipping path with only brief dips to ground from Safford to near Orrville, near Marion Junction, and on to Summerfield and Plantersville. At Plantersville, hail as large as hens' eggs reported. Residents of Plantersville terrified by funnel dipping up and down.
40. Nov. 18	3:30 p.m.	Jefferson	NE	7	50-200	1	35	6	1	From Ensley past North Birmingham to Tarrant City. Storm passed about 2 miles northwest of Birmingham Airport.
41. Nov. 18	4:15 p.m.	De Kalb	(a)	(b)	(c)	0	0	4	1	Tornado dipped at Fairview community near Dawson. 2 homes, 2 broiler houses, and several other buildings wrecked.
42. Nov. 18	4:35 p.m.	Tallapoosa	(a)	(b)	(c)	0	0	4	1	Tornado in Spring Hill subdivision of Alexander City. 2 houses, 1 trailer, and other buildings damaged. Trees strewn "like match sticks."
43. Nov. 18	5:15 p.m.	Cleburne	(a)	(a)	(a)	0	0	4	1	Tornado in Macedonia area. A number of broiler houses destroyed, scattered roof damage, porches damaged, and trailer destroyed.
44. Nov. 18	Late afternoon	Lawrence and Morgan	NE	(a)	(a)	0	0	(d)	1	Funnel cloud formed southwest of Decatur and passed over city. It may have caused light damage reported in southeastern Lawrence County.
45. Nov. 18	Late afternoon	Morgan	(a)	(b)	(c)	0	0	4	1	Brief dips of tornado wrecked 1 home, took back porch off another home, blew washhouse away, and unroofed barn at Hulaco.
46. Nov. 18	Late afternoon	Blount and Marshall	NE	30	100	3	12	5	3	From Rosa near Oneonta, passed Snead and Horton and finally just northwest of Albertville in Marshall County. Pilot of aircraft reported path as straight as an arrow and with only 1 lift which made it miss Short Creek and Town Creek.
47. Nov. 18	Late afternoon	Clay	(a)	(b)	(c)	0	0	4	1	Tornado at Ashland unroofed 1 building, moved 1 house off pillars, and damaged several roofs. 3 other buildings badly damaged. Porches removed from several houses.
48. Dec. 19	11:15 p.m.	Colbert	(a)	(b)	(c)	0	7	4	1	At Littleville.
49. Dec. 19	Late evening	Fayette	(a)	(b)	(c)	0	0	3	1	1 home and outbuildings destroyed 4 miles south of Winfield.
50. Dec. 20	2:30 a.m.	Chilton	NE	(b)	(c)	0	0	5	1	At Clanton.
51. Dec. 20	3 a.m.	Conecuh	NE	3/4	35	0	0	3	1	Hit twice with blows about 1/2 mile apart. 2 houses and 1 barn destroyed. Occurred 8 miles east of Castleberry.

See reference notes at end of table.

MICHIGAN (Cont'd)										of injuries caused by falling chunks of concrete in factory building.
MINNESOTA										
1. May 14	10 a.m.	Dodge	NW	(a)	250	0	0	(e)	1	4 miles east of Blooming Prairie, suspected tornado, severe thunderstorm, with some hail. No funnel observed. Barn destroyed. Other buildings and machinery damaged. One witness described storm as making "terrible roar" following a calm.
2. May 21	Noon	Cass	N	4-1/2	100-300	0	0	4	1	Funnel cloud observed striking farm near Staples. Barn and garage demolished. Windows in house blown out. Swath 1 mile in length cut through stand of pine trees.
3. May 21	1 p.m.	Chisago	NNE	9	100	0	2	4	1	Funnel cloud observed by several persons, also photographed. Struck 9 individual farms, beginning 1 mile east of Harris and ending 1 mile north-northeast of Rush City. Child snatched from mother's arms as they tried to escape storm and hurled both through the air. 1 house destroyed, 4 others damaged. 8 barns blown over and destroyed also numerous outbuildings. Trees up to 24 inches in diameter twisted and uprooted.
4. May 25	2:38 p.m.	Wright	NE	[f] 1,400	20	0	0	4	1	Suspected tornado flattened barn and uprooted trees near Maple Lake. Roaring noise heard, but no funnel observed.
5. June 13	P.m.	Brown	(a)	(a)	(a)	0	0	(e)	1	Suspected tornado demolished barn and damaged small buildings near New Ulm.
6. June 16	(a)	Martin	NE	(a)	(a)	0	0	3	4	Funnel cloud observed 5 miles northeast of Dunnell. 1 barn demolished. Heavy rain flooded highways and farmland.
*7. June 20	6:40 p.m.	Clay	E	26	400	0	0	5	(e)	After striking Fargo, N. Dak., tornado crossed Red River into Moorhead. 2 farms, 2 country clubhouses, and other buildings, all just north of Moorhead, damaged or partially destroyed. Length of most serious damage 3 miles. Minor damage also reported at Glyndon and Dale, east of Moorhead, as tornado weakened and finally dissipated over Lake Park.
8. June 20	7:30 p.m.	Otter Tail	E	(a)	(a)	0	0	3	1	Funnel cloud observed. Demolished cottage at Long Lake near Fergus Falls.
9. June 22	A.m.	Freeborn	(a)	(a)	(a)	0	0	1	1	Cooperative observer reported small twister near Albert Lea.
10. June 25	P.m.	Norman	(a)	(a)	(a)	0	0	1	1	Trucker sighted funnel cloud. Finley radar reported tornado.
11. June 25	7 p.m.	Freeborn	SE	(a)	(a)	0	0	(e)	(e)	Trees uprooted, steel grain bin overturned, and tractor damaged at Alden. Farmer said "it sounded like a bunch of bombers going over."
12. June 27	2 p.m.	Douglas	(a)	(a)	(a)	0	0	(e)	(d)	Suspected tornado destroyed barn 20 miles north-northeast of Alexandria.
13. June 27	2 p.m.	Otter Tail	(a)	(a)	(a)	0	0	1	1	Funnel cloud reported touching ground 2 miles east of Ottertail.
14. July 3	4-5 a.m.	Rock and Nobles	SE	50	(a)	0	2	5	5	Generally straight-line winds with some local evidence of tornado blew down at least 12 barns, thousands of trees, telephone lines, outbuildings, and windmills. Livestock killed by lightning. Drive-in theater and housetrailer damaged in Luverne.

See reference notes at end of table.

MISSOURI										
1. Jan. 22	11:40 a.m.	Dunklin	NE	1	100	0	1	4	1	Major damage to 19 homes, minor damage to 100 homes at Kennett.
2. Apr. 3	12-12:10 p.m.	Dunklin	NE	1	100	0	0	3	1	Damage to cotton gin and buildings at Caruth.
3. Apr. 3	1:30-1:35 p.m.	Mississippi	E	(a)	(c)	0	0	3	1	Damage to farm buildings 3 miles north of East Prairie.
4. Apr. 25	1:25-1:30 a.m.	Madison	NE	1/2	500	0	0	4	1	Damage to buildings in residential area of Fredricktown. Observer heard loud "screeching" sound.
5. May 9	3:30-4:15 p.m.	St. Louis	NE-N	9	100-150	0	0	3	3	First reported point of contact was on grounds of a seminary at point about 3 miles from WBAS Lambert Field. At this spot a number of trees broken in wooded area close to point of contact. 2 farms damaged and roof of school blown off and windows broken near Florissant
6. May 13	2:15-3:15 p.m.	Howell and Oregon	NE	(a)	(a)	0	0	3	1	In Howell County, tornado at 3 p.m., hit 5-1/2 miles south of West Plains, damaging several farm buildings. Another hit in White Church community south of Mountain View, Oregon County; another 1 mile east of Couch, and another between [illegible] and Billmore.
7. May 13	Ditto	Ditto	NE	(a)	(a)					
8. May 13	Ditto	Ditto	NE	(a)	(a)					
9. May 13	Ditto	Ditto	NE	(a)	(a)					
*10. May 20	7:37-8:30 p.m.	Jackson and Ray	NE	15	200-300	37	500	6	(a)	Tornado first spotted at 6:15 p.m. near Williamsburg, Kans. It crossed Kansas-Missouri border just north of southwestern corner of Jackson County at 7:37 p.m. It then hit Martin City, Ruskin Heights, and near Knobtown. Some indications tornado lifted near Knobtown, then either came back down or another funnel formed near Sibley, then moved into Ray County across river. Considerable damage to property at Richmond about 8:30 p.m. Debris from Hickman Mills found at Ottumwa, Iowa, and at many points in central Missouri.
11. May 20	Late afternoon	De Kalb	(a)	8	200	0	0	(e)	1	Damage to buildings on 8 farms in Maysville area.
12. May 20	8:45-9 p.m.	Ray	NE	(a)	(a)	0	0	(a)	(a)	Witnesses heard "freight train roar." 40-acre field at Hardin littered with debris from Grandview-Ruskin Heights storm.
13. May 21	3 p.m.	Dent	NE	12	440-880	0	1	4	1	Storm first struck on Highway 19 north of Standing Rock. Next damage 2 miles east of Doss, where home destroyed. Storm moved on to near junction of Highways 32 and 72, hitting several farm buildings and houses along way. Child hurt by flying glass.
14. May 21	3:15-3:27 p.m.	Taney and Douglas	NE	11	500-1,000	0	0	5	3	Tornado apparently first hit in northeastern corner of Taney County near Brown Branch, passed near Squires

See reference notes at end of table.

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
MISSOURI (Cont'd)										and lifted 2-1/2 miles northeast of Girdner.
15. May 21	3:45-4:15 p.m.	Reynolds to St. Francois	ENE	8	300-400	8	50	7	(a)	Tornado apparently hit in vicinity of Centerville, Reynolds County, damaging several buildings, came down again in vicinity of Belgrade, Washington County, where 20 buildings destroyed and several damaged. It then moved due east along Highway 8, destroying 1 house at Leadwood. Full impact of storm hit Desloge and Cantwell, St. Francois County, where several buildings and homes demolished. Storm hit again in vicinity of Fairview and French Village.
16. May 21	3:53-4:10 p.m.	Carter	ENE	(a)	400-500	7	50-75	(a)	(a)	Tornado hit Fremont just before 4 p.m., then moved to Van Buren. Fremont left devastated, with only 7 homes intact. In Van Buren, damage severe, but not as complete as in Fremont.
17. May 21	5-5:30 p.m.	Cape Girardeau	NE	5	500	0	0	4	1	Tornado began north of Highway 34, west of Jackson in Byrds Creek area, moved about 5 miles, making numerous "dips."
18. May 21	5:30 p.m.	Cape Girardeau	NE	3	440	0	0	4	(a)	House and barns in Millersville and Bufordville demolished in storm path. Trees uprooted.
19. May 21	5:30-5:31 p.m.	Lewis	NE	(a)	440	0	2	5	1	Storm hit 6 miles southwest of Monticello, damaging barn, then hit northwestern section of Monticello, then skipped to about 6 miles northeast where it destroyed buildings in Benjamin.
20. May 21	11:45 p.m.	Dunklin	NE	(a)	(a)	0	0	(a)	1	Tornado damage reported in eastern edge of Kennett, southwest of Arbyd, and in Gobler-Deering area.
21. May 22	2:30 p.m.	Washington	NE	100	8	0	0	(e)	1	7 barns and 5 houses damaged in Caledonia.
22. May 22	11:55 p.m.	Mississippi	NE	3-4	100-150	0	0	(e)	1	Suspected tornado. 25 houses and barns badly damaged in southeastern tip of Mississippi County. 8-room house lifted off its foundation, leaving 19 members of family inside unhurt.
23. June 7	4 p.m.	Andrew	NE	(a)	400	0	0	2	1	Funnel touched ground briefly at Fillmore, damaging farm building.
24. June 7	8-8:30 p.m	Clinton	NE	(a)	(a)	0	0	(d)	1	Funnel touched ground briefly in pasture near Gower.
25. June 12	1:15 p.m.	Douglas	(a)	(a)	(a)	0	0	(e)	1	Roaring noise heard, but no funnel seen. Possibly touched ground briefly. Farm building damaged near Ava.
26. June 14	4-4:15 a.m.	Livingston	NE	(a)	300	0	0	(e)	(e)	Buildings on several farms damaged and oats flattened in fields 2 miles northwest of Chillicothe.
27. June 14	9 a.m.	St. Charles	(a)	(a)	(a)	0	0	(e)	1	Funnel touched ground 1 mile north of Boschertown, damaging buildings on 1 farm.
28. June 15	6 p.m.	Shelby	(a)	(a)	(a)	0	0	(e)	1	Funnel-shaped cloud seen approaching farm near Lakenan. Debris blown in air. Several farm buildings destroyed.
29. June 22	Midnight-12:30 a.m	Clay and Jackson	NE	10-15	100	0	0	5	1	Many powerlines, telephone lines, trees, and homes damaged in Kansas City, and farm buildings in rural areas damaged.
30. Dec. 18	12:30 p.m.	Lincoln	NE	1/4	100	0	1	4	1	Occurred at Truxton.
31. Dec. 18	12:58-3:24 p.m.	St. Francois	NE	(a)	100	0	0	(a)	(a)	Occurred 2 to 3 miles east of Farmington.

See reference notes at end of table.

See reference notes at end of table.

TORNADO DATA

YEAR 1957

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
TEXAS (Cont'd)										injured. Mainly roof, window, sign, and TV antenna damage otherwise.
UTAH										
1. Aug. 7	5:30 p.m.	Sevier	N	1-1/2	50	0	0	4	1	Small tornado hit western edge of Salina, blowing roofs off turkey-processing plant and service station; automobile damaged and small shed demolished.
VERMONT										
1. June 18	6:05-6:10 p.m.	Franklin	NE	4	500	0	0	5	1	Funnel described by some persons as having "two tails". Destroyed 1 home and damaged many others from East Franklin to West Berkshire.
2. July 5	7:30 p.m.	Windham	SE	(a)	(a)	0	0	3	3	Unconfirmed reports of funnel cloud at Brattleboro accompanied by weird, yellow and red sky and hail. Damage to trees and utilities.
VIRGINIA										
1. Apr. 5	1:40 p.m.	Wise	NE	(a)	(a)	0	3	4	1	Damage to buildings, trees, and overhead utilities at Big Stone Gap and Norton.
2. Apr. 8	5:20 p.m.	Norfolk	NE	1	(a)	0	2	5	1	Principal damage to overhead utilities, trees, and buildings in north Norfolk.
3. May 27	8:20 a.m.	Charlotte	NE	8	800	0	0	3	(a)	Occurred in area from Old Well to Madisonville.
4. May 27	10 a.m.	Lunenburg	E	1	200	0	0	✓T 4	C	Damage mainly to farm buildings in Dundas area.
WASHINGTON										
1. Apr. 30	6:40 p.m.	Yakima	NW	1	(c)	0	0	3	1	Some doubt regarding this being a tornado. Garage roof damaged. Occurred in Yakima area.
2. May 6	9 p.m.	Spokane	E	(a)	(a)	0	0	2	1	Very small tornado or possibly large dust devil reported 10 miles south of Spokane. 1 barn roof damaged.
WEST VIRGINIA										
1. June 29	7:30 p.m.	Randolph	SSW	1/2-3/4	30	0	0	5	1	At Elkins, houses and business buildings unroofed, trees uprooted and limbs blown off, electrical services disrupted. Funnel cloud and greenish cloud formation reported. Tornado believed associated with intensification of hurricane Audrey as it moved up Ohio Valley.
WISCONSIN										
1. Apr. 19	2:30 p.m.	La Crosse	NNW	2-3	150	0	0	4	1	Skipping path. Occurred at Holmen.
2. Apr. 19	4 p.m.	Juneau	NNE	20	300	1	0	4	1	Path from New Lisbon to north of Necedah. Uprooted trees and damaged buildings on 1 farm.
3. Apr. 19	4 p.m.	Walworth and Racine	NE	6	200	0	2	✓g 5	1	Occurred in Burlington area.
4. Apr. 19	4:05 p.m.	Portage	NE	5	30	0	0	4	1	Occurred in Coddington and Bancroft areas.
5. Apr. 19	4:15 p.m.	Waushara	NE	12	150	0	1	4	1	Occurred in Wautoma and Saxeville areas.
6. Apr. 19	8:30 p.m.	Monroe	NE	8	400	0	0	5	1	Occurred at Kendall.
7. May 25	4:30 p.m.	Grant	NE	20	400	0	0	4	1	Tornado moved northwestward then curved to northeast along skipping path. A few reports of 2 or 3 funnels. Occurred in Bloomington and Fennimore areas.
8. June 14	5:30 p.m.	Florence	NE	7	100	0	0	4	1	Skipping path. Intermittant destruction in Florence area.

See reference notes at end of table.

TORNADO DATA

8 $50,000,000 to $500,000,000
9 $500,000,000 to $5,000,000,000

DUST DEVIL DATA

YEAR 1957

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
ARIZONA										
1. Mar. 23	Afternoon	Maricopa	(a)	(a)	(a)	0	0	2	1	Damaged roofs and cinder-block wall in residential section of Phoenix.
2. May 15	12:30 p.m.	Maricopa	N	(a)	(a)	0	0	3	1	Ripped roof off small house at Phoenix.
3. June 20	Afternoon	Pima	(a)	(a)	(a)	0	0	3	1	Unroofed house at Tucson.
4. June 27	Afternoon	Cochise	(a)	(a)	(a)	0	0	5	1	Aircraft blown off runway on take-off and then destroyed by fire at Douglas.
5. July 15	2:30 p.m.	Maricopa	(a)	(a)	(a)	0	0	(b)	1	Unroofed ranch house near Wickenburg.
6. July 20	2:30 p.m.	Pima	E	1	(a)	0	0	3	1	Damaged house and furnishings at Tucson.
CONNECTICUT										
1. June 17	Afternoon	Hartford	(a)	Short	(a)	0	0	(b)	(b)	Blew over lawn furniture and lifted lids off garbage cans at Windsor Locks. Weather at time sunny, with scattered clouds, and very warm.
DELAWARE										
1. July	Afternoon	New Castle	(a)	(a)	(a)	0	0	3	1	Tore much of roof off house and pulled some shingles off neighboring house, knocked over TV aerial, and blew clothes off clothes lines. Appeared suddenly on calm, sunny afternoon when temperatures 86°.
MAINE										
1. Apr. 24	12:30 p.m.	Somerset	E	(a)	1	0	0	1	1	Strong rumbling noise as black funnel damaged clothes reel and a bush, and tore storm window from house at Pittsfield.
2. June 10	Afternoon	Cumberland	(a)	Short	(a)	0	0	1	1	Lifted chicken shelter into air and carried it 25 feet. Shelter weighted between 600 and 1,000 pounds. Landed upright with only slight damage. Occurred at north Yarmouth.
MASSACHUSETTS										
1. Mar. 28	12:50 p.m.	Franklin	E	1/2	12	0	0	3	1	Demolished garage and damaged barn and farm trailer at East Shelburne.
2. Apr. 18	1:30 p.m.	Middlesex	W	200	(a)	0	0	1	1	At Dracut, small child lifted into air 3 feet and 2 other children rolled on ground by funnel, but none injured. Funnel accompanied by loud whistling sound.
3. Apr. 18	P.m.	Middlesex	NE	(a)	2	0	0	1	1	Man spun around and child bowled over at Sherborn by funnel which made humming and buzzing sound. It extended 200 feet high.
4. Apr. 23	(a)	Berkshire	(a)	(a)	(a)	0	0	1	1	Funnel rattled house and frightened occupant at North Adams.
5. Apr. 29	P.m.	Worcester	(a)	(a)	5	0	0	2	1	Funnel extended 200 feet in air at Westboro. Moved 10x10-foot chicken shelters, tossing one over 3-foot fence. It carried smaller shelter away. Sky clear and wind otherwise calm.
6. May 4	10:30 a.m.	Essex	NW	(a)	3	0	0	1	1	Narrow funnel extending 500 feet up into clear sky jostled automobile with surprising force and carried twigs and leaves aloft at Salisbury.
7. May 4	10:50 a.m.	Worcester	S	900	7	0	0	1	1	Accompanied by sound like freight train, funnel lifted 110-gallon oil drum about 75 feet into air at Fitchburg. Lumber and debris also lifted and dropped over area.
8. May 6	Noon-2 p.m.	Norfolk	(a)	(a)	(a)	0	0	1	1	Blue Hill Observatory reported

See reference notes at end of table.

DUST DEVIL DATA

YEAR 1957

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
MASSACHUSETTS (Cont'd)										numerous funnels associated with sea-breeze front (15 to 20 in all). One thin column extended to height of 600 feet. Thick column carried much sand and dust.
9. May 8	Noon	Hampshire	E	(a)	(a)	0	0	3	1	Felled large part of elm tree onto house with considerable damage at Hatfield. Accompanied by high whistle, like a siren.
10. May 25 11. May 25	1:45 p.m. 1:45 p.m.	Suffolk Suffolk	(a)	(a)	10	0	0	2	1	Funnel at South Weymouth damaged construction shed and clothes on line. Another dust devil, with no damage, reported at Waltham.
12. July 17 13. July 17 14. July 17	1:45-2:25 p.m. Ditto Ditto	Norfolk and Plymouth Ditto Ditto	(a)	(a)	(a)	0	0	1	1	Picked up dirt and tore leaves from trees at Medfield at 1:45 p.m. 2 other dust devils seen at Rockland at 2:25 p.m., no damage. Height "as tall as the tree tops."
15. July 18	Midmorning	Essex	(a)	(a)	2	0	0	1	1	Occurred at North Andover at tree-top height; no damage reported.
16. July 18	1 p.m.	Middlesex	(a)	(a)	(a)	0	0	1	1	At Marlboro, lifted shelter house and carried it 20 feet with but little damage.
17. July 22	3 p.m.	Hampden	SE	2	300	0	3	4	1	Severe thunderstorm preceded by whirling column of dust and debris which twisted many branches from trees at Westfield. Tree fell against home, another onto an automobile, injuring 1 person. Many wires downed. Other injuries in automobile accident, due to storm.
18. Aug. 9	2:20 p.m.	Middlesex	(a)	(a)	(a)	0	0	1	1	Sent people scurrying to cover, but no serious damage done at Saxonville.
19. Aug. 17	1 p.m.	Worcester	E	(a)	(a)	0	0	3	1	Sucked out plate-glass window from service station and cracked windshields on 6 automobiles at Worcester. Other minor damage.
20. Aug. 17	2:30 p.m.	Worcester	(a)	(a)	(a)	0	0	1	1	Interrupted proceedings at Rutland Fair, but damage slight.
21. Aug. 20	2 p.m.	Plymouth	SE	(a)	(a)	0	0	1	1	Funnel picked up small trailer and ripped clothes from line at Rockland.
22. Sept. 1	3:40 p.m.	Worcester	(a)	(a)	(a)	0	0	1	1	Struck large open-air tent at Petersham. Lifted tarpaulin into air with stakes, cables, and ropes flying about. None of a dozen women and children sitting on benches injured.
23. Sept. 13	3:30 p.m.	Middlesex	E	(a)	(a)	0	0	1	1	Occurred in Pinefield development of Saxonville. No damage.
24. Sept. 25	11 a.m.	Middlesex	(a)	(a)	(a)	0	0	1	1	Spiraling dust cloud carrying leaves and debris observed by several persons at Framingham. Caused no damage.
NEW HAMPSHIRE										
1. Apr. 16	2:05 p.m.	Strafford	NE	100	2	0	0	3	1	Occurred at Dover. Small row boat lifted 100 feet into air and demolished. Lumber also lifted and a fence damaged. Funnel black, darkening momentarily clear sky as it passed, and violently shook house.
2. Apr. 29	2:30 p.m.	Rockingham	(a)	1	(a)	0	0	1	1	Funnel ripped away canvas roof and blew clothes from line at Salem.
3. Sept. 1	Late afternoon	Hillsboro	SE	(a)	(a)	0	0	3	1	Occurred at Nashua. Lifted asbestos slates from shed and carried them 60 feet to house roof. Twister funnel-shaped and was carrying papers, sticks, wood, etc., when it struck.
NEW MEXICO										
1. June 9	1 p.m.	Chaves	(a)	(a)	(a)	0	0	2	1	Occurred at Roswell.

See reference notes at end of table.

YEAR 1957

State and date	Hour	County	Direction of advance	Length of path, miles	Width of path, yards	Number of persons		Estimated damage by categories †		Remarks
						Killed	Injured	Property (exclusive of crops)	Crops	
NEW MEXICO (Cont'd)										
2. June 21	10:30 a.m.	San Miguel	(a)	(a)	(a)	0	0	(b)	1	Store damaged at Las Vegas.
3. June 21	P.m.	Sandoval	(a)	(a)	(a)	0	0	2	1	House unroofed at Placitas.
4. June 21	P.m.	Valencia	(a)	(a)	(a)	0	0	2	1	Damage to partially finished building at Grants.
OREGON										
1. Mar. 25	3:45 p.m.	Multnomah	(a)	[c] 80	20	0	0	3	2	Occurred on otherwise comparatively calm day, moved through cold frames of commercial greenhouses in southeastern Portland, picking up, then dropping about 60 glass sashes.
RHODE ISLAND										
1. Apr. 22	(a)	Prividence	(a)	(a)	(a)	0	0	1	1	Moved 100-pound tub about 10 feet at Woonsocket.
2. Apr. 29	Afternoon	Providence	(a)	(a)	(a)	0	0	1	1	Ripped shingles off house, tossed porch chair 50 feet, and blew clothes off line at Greenville.
3. Aug. 7	3 p.m.	Providence	(a)	(a)	(a)	0	0	1	1	Small but strong dust devil ripped shingles and tore awnings from house at Rumford, east of Providence. Disturbance moved to nearby house where wind swept through window and knocked over lamp 15 feet inside room.
TEXAS										
1. Sept. 3	(a)	Ector	(a)	(a)	(a)	0	0	4	1	10 miles west of Odessa, metal roofing lifted off 100-foot long building and siding torn off.

† Storm damages are placed in categories varying from 1 to 5 as follows:
1 Less than $50
2 $50 to $500
3 $500 to $5,000
4 $5,000 to $50,000
5 $50,000 to $500,000

---

† Storm damages are placed in categories varying from 1 to 9 as follows:
1 Less than $50
2 $50 to $500
3 $500 to $5,000
4 $5,000 to $50,000
5 $50,000 to $500,000
6 $500,000 to $5,000,000
7 $5,000,000 to $50,000,000
8 $50,000,000 to $500,000,000
9 $500,000,000 to $5,000,000,000

a. Losses occurred; amount not reported.
b. Additional losses occurred.
c. Includes crop damage.
d. Includes damage from attendant high winds.
e. Includes damage from attendant heavy rain.
f. Includes lightning damage.
g. Damage reported as small.

NORTH ATLANTIC TROPICAL STORMS, 1957

Howard C. Sumner
Marine Section, Office of Climatology
U. S. Weather Bureau

Of the eight tropical storms detected over the waters of the North Atlantic Ocean and the Gulf of Mexico during the 1957 hurricane season, three were accompanied by winds of hurricane force.

Hurricane Audrey, the first June tropical storm of hurricane force to reach the coastline of the United States since 1945, caused heavy loss of life and property damage, particularly along the western Louisiana and east Texas coasts. The other two 1958 hurricanes, Carrie and Frieda, ran their entire course over the waters of the North Atlantic.

For the second successive year, all of the tropical storms that reached the continental United States moved inland on the Gulf coast. Of these the only one reaching the Atlantic was the unnamed storm of June 8-14 which, after losing its tropical characteristics, moved into the Atlantic across the southern portion of the South Carolina coast.

Hurricane damage of over $152 million in the United States during 1957 was considerably less than in a number of recent years. However, the great number of drownings associated with hurricane Audrey brought the total loss of life in the United States from all 1957 tropical storms to 395, a figure which has not been exceeded since 1938 when about 600 died in the New England hurricane. An additional 80 lives were lost outside the United States making a total for all areas in 1957 of 475.

Although the greatest loss of life during the year occurred on shore, there were two marine casualties. As hurricane Audrey, the first of the season, approached the Gulf coast near the Louisiana-Texas border, the M/V KOTURAH, which was under tow in heavy seas off Galveston, sank with the loss of 7 lives. Later in the season, on September 21, the German sailing vessel Pamir sank in hurricane Carrie with 6 surviving from a crew of 86. A summary of the individual storms follows. Their tracks appear on figure 3.

UNNAMED TROPICAL STORM, JUNE 8-14, 1957

Unsettled conditions, accompanied by abnormally low pressure, prevailed over the southwest Gulf of Mexico and the Yucatan area on June 7. Late that day and during the morning hours of June 8, pressure indicated that a depression with a poorly defined circulation existed over the Gulf. At 10 a.m. (c.s.t.) on the 8th it was centered 200 to 250 miles south of Mobile, Ala. Although aircraft reconnaissance on the 8th was unable to locate a definite center, observations from ships in the area indicated that the storm had an exceptionally fast forward movement of about 25 m.p.h. It crossed the mainland east of Apalachicola, Fla., and during the night of the 8th moved northeastward through northern Florida and southern Georgia entering the North Atlantic on the 9th.

Exceptionally heavy rain attended passage of this storm, particularly in Suwannee and all adjacent Florida counties - 48-hour amounts of nearly 15 inches at official stations and some unofficial amounts as high as 19 inches. There was considerable damage to field and truck crops, particularly to tobacco and watermelons. Between 100 and 200 families were evacuated near Perry, Fla. According to the Meteorologist in Charge at Jacksonville, there were at least nine reported tornadoes or damaging windstorms in northeastern Florida on the afternoon and evening of the 8th, and another tornado over Jekyll Island in southeastern Georgia. No deaths were reported from these tornadoes, and the damage and injuries were small.

Having lost its tropical storm characteristics, the extratropical LOW crossed the east coast a short distance south of Charleston, passed eastward over the Atlantic, and reached the vicinity of Bermuda during the morning of the 12th of June, and then headed northeastward, dissipating on the 14th.

In an observation at 0300 G.M.T. on June 10 the SS ATLANTIC VOYAGER located near lat. 32.9°N., long. 72.3°W. reported winds of 65 knots from the north-northeast. About 15 hours later at approximately 1800 G.M.T. on the same day the SS ALCOA PURITAN near lat. 33.8°N., long. 70.5°W. encountered winds from the east-southeast at 63 knots.

HURRICANE AUDREY, JUNE 25-28, 1957

Highlights

Hurricane Audrey, one of the most destructive June hurricanes of record, reached the coastline near the Louisiana-Texas border on the morning of June 27, 1957. A late count indicates that the storm claimed 390 lives and wrought damage estimated at about $150 million. Extreme tides of more than 13 feet and winds in excess of 100 m.p.h. accompanied the hurricane as it moved onto the coast. Rainfall exceeded 10 inches in Jefferson Davis and Acadia Parishes, a maximum of 10.40 inches falling at Jennings, La., during passage of the storm. Greatest damage extended from Sabine Lake to Cote Blanche Bay with extensive damage from the Atchafalaya River westward and northward into La Salle Parish. The cities hardest hit were Cameron and Lake Charles, La., and Port Arthur, Tex.

History of the Hurricane

The existence of a tropical depression in the southwestern Gulf of Mexico was first suspected when upper air winds showed evidence of a weak circulation over the Bay of Campeche on June 24. Later in the day additional confirmation came in an observation received from a boat of the shrimp fleet. At 10:30 p.m. (c.s.t.), with the strongest winds associated with the storm 35 to 40 m.p.h., the Hurricane Warning Center at New Orleans issued the first public bulletin.* During the night the circulation increased rapidly in intensity and by the following morning aircraft reconnaissance reports and an observation from the S. S. TERRIER indicated that the storm, while remaining almost stationary in location, had increased to hurricane intensity.

On June 27, the SS TILLIMOOK was in the eye of the hurricane between 0910 and 1025 G.M.T. near 28.7°N., 94.0°W. In an 0600 G.M.T. observation, before entering the eye, the ship reported 27-foot waves from the east with a period of 21 seconds. Approximately 5 hours after leaving the eye, the vessel encountered winds of 90 knots from the southwest with visibility reduced to a tenth of a mile.

---

* A complete listing of official warnings, advisories, and bulletins issued by the Weather Bureau in connection with hurricane Audrey is given in a preliminary report "Hurricane Audrey" dated July 8, 1957. This report can be secured by request made to the U. S. Weather Bureau, 24th and M Streets, N. W., Washington 25, D. C., Attention: Publications Section.

The hurricane, now known as Audrey, began a northward movement as it increased in size and intensity. Moving forward at a speed of approximately 15 m.p.h., the center crossed the coastline during the morning of June 27 near the Texas-Louisiana line, at a point about midway between Beaumont, Tex., and Lake Charles, La. The center of the storm passed east of Sabine Pass, with the City of Orange, Tex., in the western portion of the eye between 9:00 and 10:00 a.m. (c.s.t.)

From this point the storm moved northeastward across Louisiana and into northwestern Mississippi, losing strength as it progressed. The center passed over Vinton, Hackberry, De Ridder, Winfield, and Monroe, La., on the 27th and over Greenville, Minter City, Oxford, and Corinth, Miss., during the morning of June 28. The eye of the hurricane was approximately 35 miles in diameter as it moved across the coast, gradually closing until it lost its identity in the vicinity of Winnfield. Moving on a northeastward course the storm reached northern Louisiana on the morning of the 28th and became extratropical. It continued to move northeastward along the West Virginia-Ohio border and passed through the western portion of Pennsylvania and New York, crossing Lake Ontario during the night.

Pressure

A low pressure of 958 millibars (28.30 inches) was observed by the Fish and Wildlife Service at Hackberry, La., at 9:45 a.m. (c.s.t.) on June 27. The lowest pressure observed at a Weather Bureau Station was 966 millibars (28.52 inches) at Port Arthur, Tex., which at the time was in the western edge of the hurricane eye. The Weather Bureau Airport Station at Lake Charles, La., reported a low of 972 millibars (28.69 inches) at 11:40 a.m. (c.s.t.)

A tabular listing of low pressures and high winds and tides reported during the passage of Audrey is given as table 1.

Wind

Gusts of wind near or exceeding 100 m.p.h. were reported at a number of locations along the coast. A maximum gust of 105 m.p.h. at 9:40 a.m. (c.s.t.) was recorded on the Cities Service Corporation's wind dial located 10 miles to the west of Lake Charles at Sulfur, La. A gust recorder chart from the Drill Barge "Vinegarroon", a portion of which is reproduced as figure 1, shows that a gust in excess of 100 m.p.h. was recorded at that location before the wind indicator failed shortly after 6:00 a.m. (c.s.t.) on June 27. Peak gusts to 150 m.p.h. were reported by several drifting oil tenders.

The Sabine Pass Coast Guard Station reported a fastest mile of 85 m.p.h., with gusts of 100 m.p.h. from the northwest. At the Weather Bureau Airport Station at Lake Charles, the fastest mile was recorded as 69 m.p.h. from the southeast, accompanied by gusts between 90 and 100 m.p.h. There were an unusual number of tornadoes and local storms that accompanied Audrey as she moved northeastward across Louisiana and Mississippi.

Tides and Inundation

Tides rose along the east Texas and entire Louisiana coastline reaching 6 feet or higher from Sabine Lake to Cocodrie, La. The highest tides reported were 13.9 feet above m.s.l. measured at the mouth of the Mermentau River and 12.2 feet above m.s.l. observed at Grand Chenier, La. High tides caused the Atchafalaya River to rise to a height of 8.5 feet above m.s.l. at Morgan City, which exceeded the previous record by 1.7 feet.

Tidal salt water covered all of Cameron and most of Vermilion Parishes and penetrated far inland in Terrebonne, La Fourche, and Jefferson Parishes. Along the Texas coast flooding was largely local in nature due to inadequate drainage. Storm tides were, however, 3 to 4 feet above normal in the Corpus Christi-Port Aransas section, causing some minor damage to beach installations and roads. At Galveston, a tide of slightly over 6.0 feet above m.s.l. caused flooding to depths of 6 to 12 inches over parts of the Galveston Airport.

Captain J. Dryden of the BRITISH SPLENDOUR gives the following description of hurricane Audrey:

"On June 26, 1957 at 1230 G.M.T., the vessel was berthed at Texas City. The wind was a little north of east, force 3, barometer 1007 mb., temperature 82°.

"Throughout the rest of the morning (local time) the wind increased, sky became completely overcast, and passing squalls were observed. At 2200 G.M.T., the wind was E x N force 5 when the first rain squall struck the vessel. Thereafter there was a succession of frequent rain squalls, with the wind increasing to force 9 in them.

"By 0400 G.M.T. on the 27th June, the wind was force 12 and over, rain was continuous and horizontal and, although there was a low island (about 10-12 feet high) one cable to windward of the vessel, spray was driving aboard with the wind and rain.

"Soon after this the wind began to back fairly quickly; the driving spray was not now so apparent, as the wind was on the port quarter, but rain was continuous and torrential until at 1000 G.M.T. the barometer reached almost its lowest observed during the passage of the storm (988 mb).

"By 1100 G.M.T., wind force had decreased to 9 and backed to north, rain was gradually easing until at 1400 G.M.T., wind was westerly force 8.

"During the height of the storm the water level rose to between 8 and 9 feet above chart data. (Normal spring rise is about 2 feet.) This phenomenal rise of water caused the land around the ports of Galveston and Texas City to become inundated and the results at Cameron (29°48'N.,93°19'W.) were catastrophic."

Figure 2 indicates the extensive coastal area that was inundated by salt water during the passage of Audrey. At some points inundation extended 20 to 25 miles inland.

Loss of Life and Property Damage

A recent survey indicates that the loss of life attributed to hurricane Audrey reached a total of 390 known dead*, with most of these fatali-

---

* Deaths listed include 263 identified and 127 unidentified. Reported missing were 192 persons, many of whom may have been among the 127 unidentified dead.

ties the result of drownings in inundated areas along the western Louisiana and eastern Texas coasts. Some lives were lost in other areas, as a result of tornadoes, and 7 deaths were reported in the sinking of the fishing boat M/V KOTURAH which was under tow in heavy seas off Galveston.

Many lives were saved through mass evacuations in which a reported 75,000 persons moved from low-lying coastal areas to higher ground. There was extensive advance evacuation of persons from the Bolivar Peninsula southwest of High Island and almost complete evacuation from the Sabine Pass Section.

Total damage resulting from Audrey has been estimated at $150 million-$120 million in Louisiana, $9 million in Mississippi, $8 million in Texas and lesser amounts eastward and northward as far as Canada.

Almost all property was destroyed in a 20 mile area from east of Cameron to the small towns of Creole and Chevanier and more than 60 percent in an area 50 miles long extending 5 miles inland. In the Cameron to Grand Chenier area, 60 to 80 percent of the houses were destroyed or floated off their foundations. About 4,500 homes were destroyed or irreparably damaged in Louisiana, with 100,000 in Louisiana and 50,000 in Mississippi suffering lesser damage. Salt water inundation of a large rice acreage, corn blown down, and flooded cotton fields were the chief crop losses, which have been roughly estimated at $50 million for Louisiana and Mississippi combined. Thousands of cattle drowned or starved, and the trapping industry was probably wiped out for years. Scattered wind damage occurred over the northwestern half of Alabama on the night of the 27th and the morning of the 28th, with no concentrated damage. There were a few instances of structural damage to buildings, the most notable being the unroofing of a school building near Ryland in Madison County. Maximum recorded wind gusts were 71 m.p.h. at Birmingham, 60 at Mobile, 55 at Muscle Shoals, and 48 at Montgomery. Hurricane damage in Alabama has been estimated at $200 thousand.

In addition, over an area south of Montgomery, Ala., an outbreak of 8 tornadoes occurred between 8:30 a.m. and 11:00 a.m. (c.s.t.) on the 28th, as a result of atmospheric conditions associated with Audrey at a time when the storm was centered near the northwestern corner of the State. Fourteen persons were injured in these tornadoes, with property damage estimated about $600 thousand. The area in which these tornadoes occurred extends from Clarke, Monroe, and Conecuh Counties northeastward into Montgomery and Bullock Counties. Following the northeastward course taken just prior to reaching the coast, the storm became extratropical as it reached the northern Louisiana area about midday on the 28th. In the Tennessee-Kentucky-Ohio area, the generally minor wind damage which occurred was concentrated to the east of the storm path. Strongest gusts observed were near 50 m.p.h. at Chattanooga, Knoxville, and Crossville. Flooding was minor and restricted mainly to small tributary streams and low-lying farmlands where runoff was excessive due to heavy antecedent rains.

The storm which had been weakening over the Mississippi and Ohio Valleys re-intensified considerably over the Great Lakes area, due to extratropical processes. Flood and wind damage was reported from widespread areas in the States bordering the Great Lakes.

Over Illinois, rains of 8 to 10 inches along a line from Pana to Paris caused severe flooding of farmlands and placed many highways under water for 1 to 3 days. Rains up to 10 inches fell over central Indiana on June 28 and 29, resulting in floods that drowned 5 persons, damaged over 1,000 homes, flooded 125 business places, washed away approximately a half million acres of crops, and knocked out highway and railroad bridges. Losses by the railroads are estimated at $1.2 million. An 18-car work train fell into Big Walnut Creek near Reelsville when a bridge, weakened by flood water, collapsed. During this storm areas were inundated where previous flooding was unknown. Total damage in Indiana has been set at nearly $2.5 million.

Damage in Pennsylvania, confined mostly to the western portion, was relatively light and resulted mostly from thunderstorms and gusty winds associated with the storm as it moved across the northwestern portion of the State. Winds reached 65 m.p.h. in the Pittsburgh area and an estimated 40 to 50 m.p.h. at Harrisburg. Damage was confined mostly to trees, utility lines, and a few house roofs. One person was killed by lightning and another injured by a falling tree.

Damage in New York State was almost entirely a result of wind effects. The greatest damage occurred in western and central counties near and south of Lake Ontario. Winds reported at 95 to 100 m.p.h. at Jamestown resulted in a general power failure in the area. There were some 150 separate breaks in main powerlines over the western Counties.

At the Buffalo Airport, winds over 50 m.p.h. were observed. Over the north-central counties south of Lake Ontario, damage was almost entirely from winds as dry soils prevented flooding. In some areas there is evidence that the heavy rains probably counter-acted other damage in their relief to crops.

Along the shores of Lake Erie, there was considerable damage to small boats as the wind raised the water level 3 feet above normal. There was no flooding of consequence, but a marked rise in the Niagara River caused damage to sight-seeing facilities and river docks below the falls. Overall damage in New York State is estimated between $250 thousand and $500 thousand and there were 4 deaths attributed to the storm.

HISTORICAL GULF COAST STORMS

The passage of hurricane Audrey is reminiscent of an equally fatal storm which, on the night of August 10, 1856, completely devastated the fashionable hotel and pleasure resort on Last Island, or Isle Derniere as the French call the dot of land lying off the Louisiana coast, 150 miles east of Cameron. During the earlier hurricane, a storm tide swept an estimated 400 persons to their deaths. Last Island is now only a haven for pelicans and other sea birds, mute testimony to the fury of the storm that struck a century ago.

The development of storm tides on the low-lying coasts of the Gulf of Mexico is not unusual with hurricanes. When a hurricane approaches the coast slowly in a direction nearly normal to the coastline, as in the case of Audrey, the storm tide is often the most destructive feature of the hurricane. Some other notable hurricane-caused tides in Gulf coastal areas are the following:

(1) Sept. 16, 1875, Indianola, Tex.; disastrous inundation from Matagorda Bay; wind estimated 100 m.p.h.; 176 lives lost.

(2) Aug. 19, 1886, Indianola, Tex.; water in the bay rose rapidly; not a house remained undamaged; the town was not rebuilt.

(3) Oct. 1, 1893, New Orleans, La.; the storm was accompanied by a tidal wave and caused a loss of approximately 2,000 lives.

(4) Sept. 8, 1900, Galveston, Tex.; the water rose at a steady rate from 3 p.m. until about 7:30 p.m. when there was a sudden rise of about 4 feet; approximately 6,000 persons lost their lives.

(5) Aug. 17, 1915, Galveston, Tex.; the tide at Galveston was 12 feet above normal; extreme wind speed was 120 m.p.h.; 275 lives lost; property damage estimated at $50 million.

(6) Sept. 29, 1915, Mississippi Delta; highest tides of record (to that time) observed on delta; extreme wind speed was 140 m.p.h.; 99 out of 100 houses destroyed in Leeville; 275 deaths reported.

(7) July 5, 1916, Mobile, Ala.; tide was 11.6 feet above normal; wind reached 107 m.p.h.; 4 deaths and $3 million property damage in Mobile.

(8) Oct. 25, 1921, Tampa, Fla.; tide at Tampa rose to 10.5 feet; 6 deaths and $3 million property damage.

(9) Oct. 4, 1949, Freeport, Tex.; storm tide exceeded 11 feet at Freeport; $5 million damage to Texas rice crop.

TROPICAL STORM BERTHA, AUGUST 8-11, 1957

Tropical storm Bertha developed over the Northern Gulf of Mexico in an area of disturbed conditions that prevailed about 100 miles south of the mouth of the Mississippi River on August 8. At this stage of development the storm was accompanied by winds of 30 to 40 m.p.h. in scattered squalls, with winds slightly higher in some of the heavier squalls. From this region the storm, moving in a northwesterly direction, crossed the coastline near Cameron, La., during the late afternoon of the 9th of August and at 7 p.m. (c.s.t.) was centered about 20 miles south of Lake Charles, La. After moving inland the storm weakened and turned northward, passing through east Texas and reaching southeastern Oklahoma during the morning of the 11th of August. In this area the center could no longer be distinguished on a surface map, although a circulation aloft was accompanied by locally heavy rains for about 3 days as the storm area turned eastward and moved across northern Arkansas.

The lowest pressure reported along the coast was 1001 millibars (29.56 inches) from the Weather Bureau Airport Station at Jefferson County Airport, Beaumont, Tex. A slightly lower pressure 997.6 millibars (29.46 inches) was reported from an oil rig located at lat. 28.7°N., long. 91.4°W.

Estimates of winds between 50 and 70 m.p.h. came from a number of ships and land stations. On August 9, the SS NORTH CAROLINA near 28.0°N., 89.6.W., reported a wind of 55 knots from the east. The Weather Bureau Airport Station at Beaumont, Tex., recorded a fastest mile of 44 m.p.h. from the north with gusts to 52 m.p.h.

Excessive rainfall of 12.8 inches was reported from a location 14 miles north of Palestine, Tex., during passage of the storm. At Livingston, Tex., rainfall associated with Bertha was reported as 10.73 inches. Locally heavy rains sent the Trinity River past flood stage and spread its waters 6 miles wide at a point near Liberty, Tex. There was some flooding of homes and business places in Trinity and nearby Livingston, but no heavy damage or casualties were reported in this area. A report of a highest tide of 4.7 feet came from the Schooner Bayou control structure at the west end of Vermilion Bay.

As a result of the severe threat that Bertha posed to the Louisiana and Texas coasts, thousands of persons were evacuated from low-lying areas. Only the sheriff and 12 men remained in Cameron, which less than 3 months before had been devastated by Audrey, the first hurricane of the season. Some 1,350 workers were removed from oil drilling platforms in the Gulf of Mexico, two of whom were rescued by a helicopter from the oil rig tender MURMANILL No. 1 shortly before she sank stern first in the choppy seas about 3 miles south of Tambalier Bay.

The remnants of Tropical Storm Bertha caused excessive heavy rains over a large area of west-central and north-central Arkansas during the afternoon and evening of August 12 and the morning of the 13th. The rains caused considerable flash flooding over a large area with unusually high waters reported on several creeks. A flash flood on the Little Red River reached a crest of 44.2 feet (20.2 feet above flood stage) at Heber Springs at 7:00 a.m., of the 14th and 36.5 feet (6.5 feet above flood stage) at Judsonia at 4:30 a.m., of the 16th. Streets and buildings were flooded in the towns of Mansfield, Clarksville, and Clinton.

Damage from this flash flooding was spread over a large area comprising portions of 14 counties. Since much of the damage was of a local nature, accurate estimates of the monetary losses involved are very difficult to obtain. Damage was $113 thousand in Conway County, $100 thousand of which was to roads and bridges. Faulkner County reported over $100 thousand damage, $35 thousand of which was to roads and bridges. Scott County reported about $12 thousand damage, $1.5 thousand of which was to roads and bridges. Two persons drowned in Conway County when Cypress Creek overflowed and washed away their home.

The storm moved into the northeastern portion of the state on the 13th and 14th, with unofficial precipitation amounts of as much as 12 inches reported. This rain caused flash floods over eastern Greene and southern Clay Counties. Clay County authorities estimate the damage from the flash floods at over $700 thousand, of which $500 thousand was to crops in flooded fields and $100 thousand to roads and bridges. A Missouri Pacific freight train was derailed when it ran onto a flooded section of track near Knobel in southern Clay County.

HURRICANE CARRIE, SEPTEMBER 2-24, 1957

Hurricane Carrie formed in the tropical North Atlantic near the Cape Verde Islands, traveled on an erratic westerly and northwesterly track to a position north of Bermuda, and then turned sharply eastward near the 35th parallel. Carrie was charted over one of the longest tracks, probably the longest track, of record - approximately 6000 miles from its origin off the African coast to near Bermuda and back across the Atlantic to the British Isles.

The first indications that a storm was forming were found in aircraft reports of PANAIR do BRASIL, which on September 2 indicated the existence of a tropical cyclonic development in the vicinity of the Cape Verde Islands (near lat. 11°N., long. 25°W.). No other information was available in the area until September 6, when the ship AFRICAN STAR, about 700 miles west of the Cape Verde Islands, reported a wind of 80 knots from the east-northeast. On the basis of the reports from the AFRICAN STAR, the San Juan Weather Bureau Office issued the first advisory on this severe hurricane. This was the first of a series of 62 advisories, the greatest number ever issued by the Weather Bureau in connection with an Atlantic hurricane.

On September 7, in an unusually long flight, the regular Air Force Gull reconnaissance plane from Bermuda was diverted to the storm area. The observer reported maximum winds of 138 m.p.h. at the 700 millibar level with a well defined eye 20 miles in diameter and a minimum surface pressure of 945 millibars (27.91 inches). This fix made on the 7th and a later one made on the 21st probably reached the farthest east positions a hurricane has ever been reconnoitered by an airplane in the tropical Atlantic. Reconnaissance during the next four days showed a gradual rise in central pressure and on the 11th the minimum pressure was 984 millibars (29.06 inches) and the highest winds were reported as about 70 m.p.h.

After an initial curve to the northward, a rebuilding of the high pressure ridge over the north Atlantic forced a change in course toward the northwest. This change in direction was accompanied by re-intensification and on the 12th reconnaissance aircraft observed maximum winds of 108 m.p.h. and a minimum sea level pressure of 960 millibars (28.35 inches). The increase in intensity and size continued until on the 16th the storm was characterized by National Hurricane Research Project observers as the most perfectly formed hurricane in their experience. The winds of 138 m.p.h. reported on this date were the maximum surface winds observed during the life of Carrie although it is likely that higher velocities occurred during the period of lowest central pressure on September 7 and 8.

When the hurricane passed to the northeast of Bermuda on the 16th, poor radar definition and an increase in the diameter of the eye to 40 to 70 miles indicated weakening. However, as it curved eastward in advance of a trough moving into the North Atlantic, it still maintained maximum winds of near 100 m.p.h. for the next several days. On the 21st the German sailing ship PAMIR encountered the storm southwest of the Azores and went down with the loss of 80 of her 86 crew members. Insufficient reports were obtained to indicate the maximum wind and lowest pressures observed as it passed through the Azores the next day but it is likely that winds of hurricane force persisted. Carrie began to assume extratropical features thereafter and accelerated to the northeast, lashing the British Isles with high winds on the 24th and 25th and causing tremendous waves on the coast and floods over parts of the Isles.

TROPICAL STORM DEBBIE, SEPTEMBER 7-9, 1957

Tropical storm Debbie developed on the morning of September 7 as a weak circulation on an easterly wave that had been observed for several days moving across the northern Gulf of Mexico. The storm moved northeastward at about 15 m.p.h. and intensified somewhat before it moved inland near Fort Walton, Fla., at about 10 a.m. (c.s.t.) on the morning of the 8th. Debbie, however, never became a severe storm. The center continued northeastward across southeastern Alabama and into Georgia with decreasing intensity. By noon of the 9th the pressure and wind patterns had become diffuse and merged with other stronger weather systems.

During passage of the storm, winds of 30 to 40 m.p.h. were reported from stations along the track. The highest winds were reported from the Tampa-Tallahassee area, with Tampa, Fla., reporting a peak gust of 52 m.p.h. from the south on the 8th. A low pressure of 1005 millibars (29.68 inches) was reported at Pensacola, Fla., at 5:30 a.m. (c.s.t.) on the 8th.

Varying precipitation amounts ranging as high as 11.26 inches at Wewahitchka, Fla., accompanied by tides 1 to 4 feet above normal, caused some local flooding, particularly in the vicinity of St. Marks, Fla., where flood waters reached the downtown area. Rains in Florida, Georgia, South Carolina, and Alabama in most instances were welcome as they filled lakes and ponds which were at low levels; and were for the most part more beneficial than damaging to growing crops. No deaths or severe injuries were reported as a result of this storm.

TROPICAL STORM ESTHER, SEPTEMBER 16-19, 1957

A midlevel cyclonic circulation over Nicaragua on September 12 drifted northeastward and out over the southwestern Gulf of Mexico on the 15th. Tropical storm Esther formed under this circulation on the 16th and intensified during the first 24 hours of its existence, but did not reach hurricane force. Over the Gulf, the storm took on a northward drift of about 15 m.p.h. and was characterized by a central area of relatively light winds with a diameter of roughly 100 miles. Turning to a north-northeasterly direction the storm area reached the southeastern Louisiana coast about daybreak on the 18th and moved up the Mississippi Valley where it dissipated during the 19th.

The lowest pressure observed at a land station was 1003 millibars (29.62 inches) at New Orleans, La. A slightly lower pressure of 1000 millibars (29.53 inches) was reported by reconnaissance aircraft flying in the vicinity of lat. 23.5°N., long. 93°W. The highest observed wind occurred a considerable distance to the east of the storm track in a squall at Pensacola, Fla., where a maximum of 52 m.p.h. from the south and gusts to 75 m.p.h. were reported at the airport on the 18th. Mobile, Ala., recorded a fastest mile of 40 m.p.h., with peak gusts of 60 m.p.h. during the morning of the 18th.

Attendant squalls and heavy rains occurred in advance and to the east of the central storm area and continued along the Mississippi and Alabama coasts and near the mouth of the Mississippi River for some time after the central portion of the storm area had passed to the north. Heavy rains from Esther began on September 17 and continued through September 19. The heaviest reported was 18.11 inches at Quarantine, La., recorded between 9:10 a.m. on the 17th and 3:30 p.m. on the 19th. Other heavy falls in the area of excessive rains were 13.36 inches and 12.35 inches at Buras and Burrwood, La., respectively, and 12.74 inches and 11.12 inches at Van Cleve and Richton, Miss. Tides were generally 4 to 5 feet above m.s.l. along the Louisiana and Mississippi coasts east of the mouth of the Mississippi River. A high tide of 6.5 feet above m.s.l. was reported as occurring at 10:00 a.m. on September 18 at Gulfport, Miss.

Additional pressure, wind, precipitation, and tide values for selected stations are listed in Table 2.

Some flooding, caused primarily from the heavy rains, occurred through southeastern Louisiana, southern Mississippi, and along the Alabama coast. In the Buras, La., section breaks in the back levees, brought about by inflow from the Gulf of Mexico, resulted in considerable flooding. Although there was some damage to piers and small craft along the coast, property damage from winds and local flooding was generally minor and did not exceed a few hundred thousand dollars. Crop losses were more extensive and have been estimated at about $1 million; the greatest losses being in cotton, peanuts, and pecans. In Mobile and Baldwin Counties, Ala., an estimated 50 percent of the pecans were blown from the trees. In most sections the heavy rains were beneficial to agriculture since precipitation during the months of July and August had been much below normal throughout the general area.

No loss of life was directly attributable to the storm during its passage, but two persons were drowned later in a New Orleans canal and one person was electrocuted by a downed wire at Buras, La., the following day.

HURRICANE FRIEDA, SEPTEMBER 20-27, 1957

Hurricane Frieda was first identified in its formative stage on September 20, as a squally area with an ill-defined wind circulation near Bermuda. On the 21st, it was located about 800 miles east of Miami. At this stage Freida was moving in a westerly direction toward Florida but then turned northeastward parallel to the coastline without appreciably affecting any land area. During the first few days of its existence highest winds around the center were 26 to 35 knots with gusts up to 52 knots. After recurving northeastward off the coast Frieda intensified and on September 25, when the storm was moving past the Virginia Capes, it reached hurricane force with highest winds estimated at 61 to 70 knots. Assuming extratropical characteristics on the 26th, it remained a dangerous storm for vessels in its path as it advanced along a northeastward course in the western Atlantic, passing close eastward of Newfoundland on the 27th.

UNNAMED TROPICAL STORM, OCTOBER 22-27, 1957

While this October storm did not develop strong tropical characteristics, it was accompanied by a few squalls with winds as high as 43 knots. The storm developed about 500 miles northeast of Puerto Rico and moved in a northwesterly direction to 27°N., 66°W. It recurved on the 24th and passed about 120 miles southeast of Bermuda on the 25th. Continuing on a northeasterly course the storm became extratropical on the afternoon of the 26th.

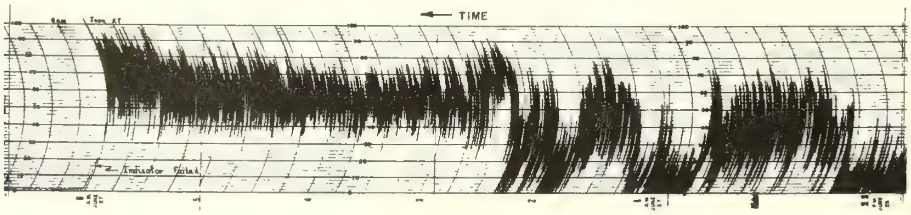

FIGURE 1 HURRICANE AUDREY, Gust Recorder Chart from the Drill Barge VINEGARROON. - Period: 11:00 p.m. June 26 through 6:00 a.m. June 27, 1957. Approximate Location: Lat. 29° 38' N., Long. 93° 05' W.

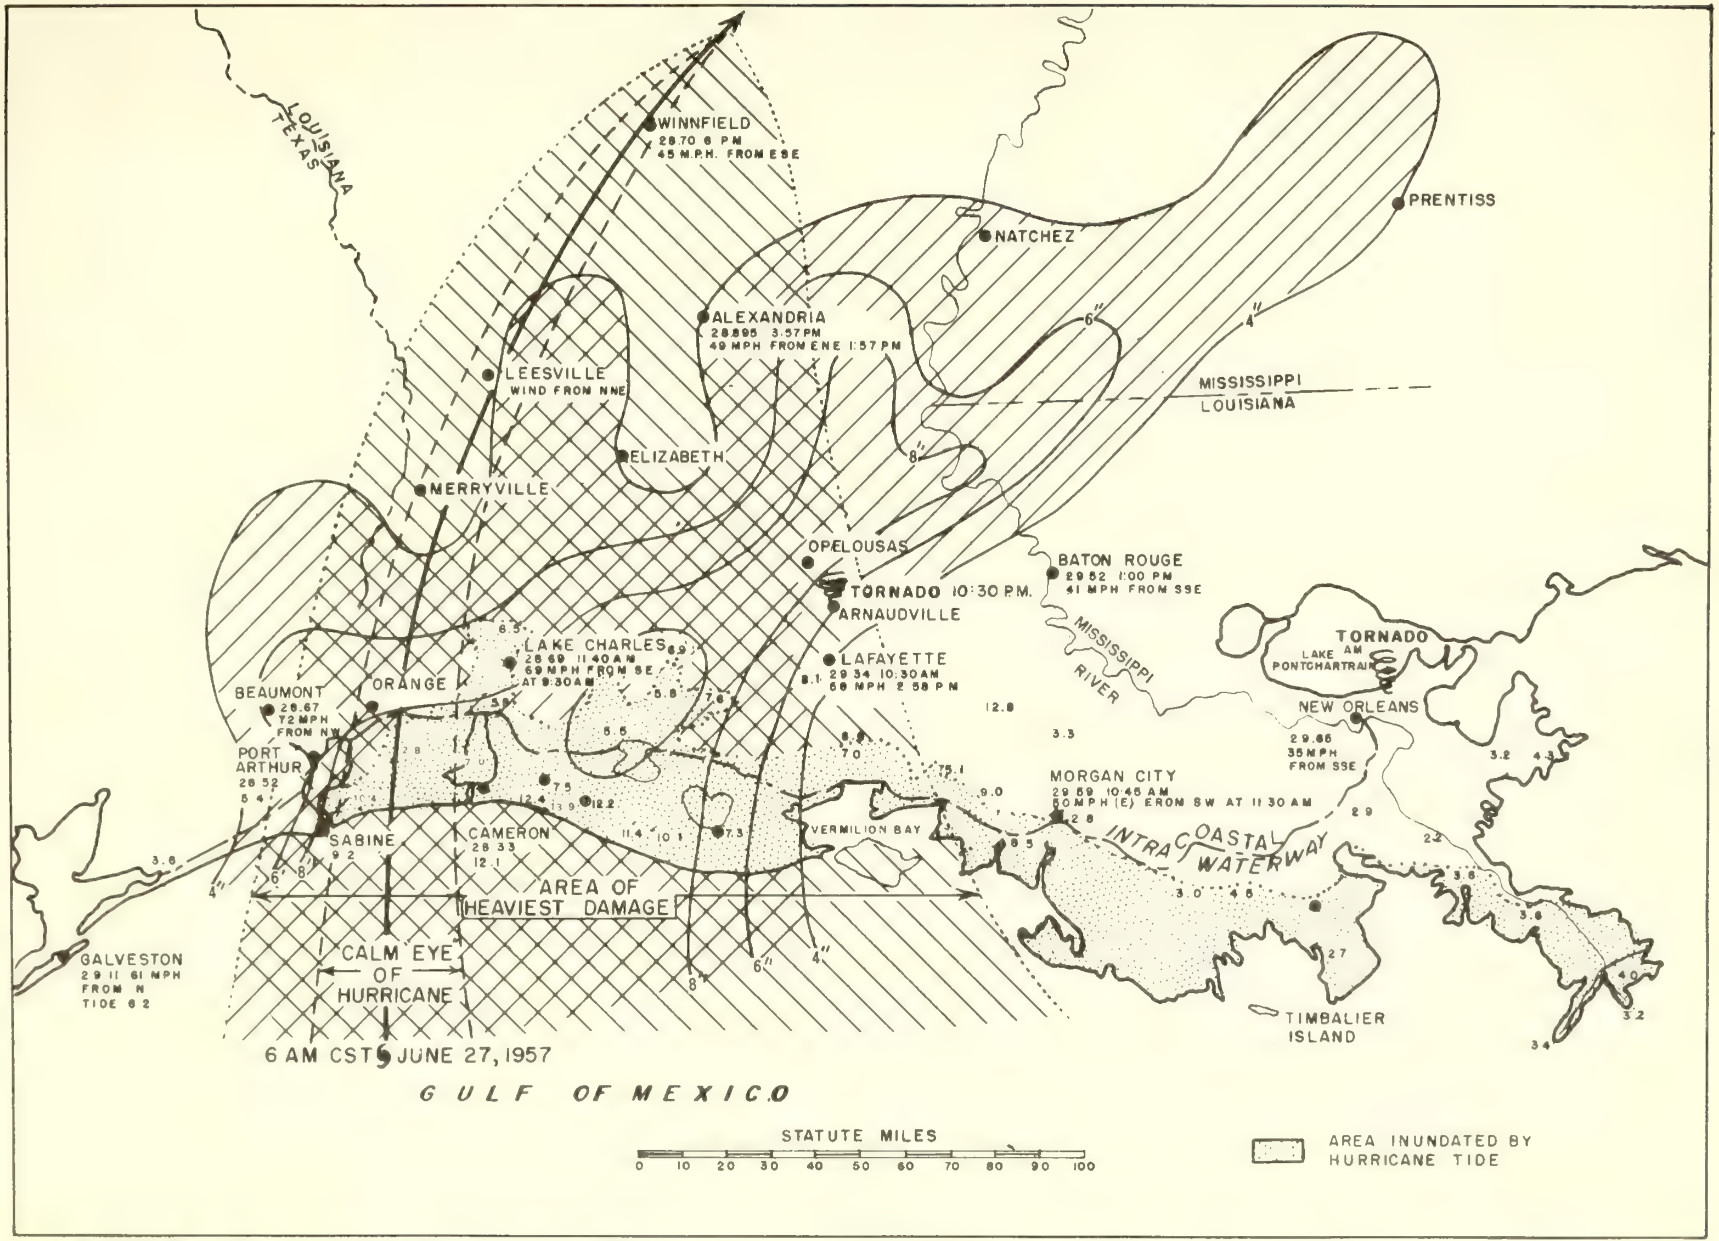

FIGURE 2 Map showing landfall and track of hurricane Audrey in Louisiana on June 27. Wind speeds given are the fastest mile or the highest 1-minute speed; (E)=estimated. Pressure (inches) is the lowest observed at the point plotted. Tide heights are in feet above mean sea level, and were measured by the Corps of Engineers.

TABLE 2

HURRICANES AND TROPICAL DISTURBANCES

(Names of storms in table correspond to names on tracks shown on accompanying chart)

YEAR 1957

Storm name	Date	Area where first reported	Coast lines crossed	Highest wind speed reported	Lowest pressure reported *	Place of dissipation reported	Intensity	Remarks
Unnamed	June 8-14	Central Gulf of Mexico	Florida and South Carolina	65 knots from the north-northeast reported by the SS ATLANTIC VOYAGER near Lat. 32.9°N., Long. 72.3°W.	Not reported	Atlantic Ocean near Lat. 40°N. Long. 55° W.	Tropical Storm	Exceptionally heavy rain over northern Florida resulting in some flood damage.
AUDREY	June 25-28	Bay of Campeche	Louisiana and Texas	Gusts of 100 m.p.h. from the northwest reported by the Sabine Pass Coast Guard Station.	958 mb (28.30 in) at Hackberry, Louisiana.	Canadian border in vicinity of Lake Ontario	Hurricane	One of the most destructive June hurricanes of record, claimed 390 lives and caused damage estimated at $150,000,000.
BERTHA	Aug. 8-11	North central Gulf of Mexico	Louisiana	A fastest mile of 44 m.p.h. with gusts to 52 m.p.h. reported by the Airport Station at Beaumont, Texas.	998 mb (29.46 in) reported from an oil rig at 28.7°N., 91.4°W.	Arkansas-Oklahoma area	Tropical Storm	Heavy rainfall in excess of 12 inches at some locations caused considerable damage from flash flooding over large areas of Louisiana, Texas and Arkansas.
CARRIE	Sept. 2-23	North Atlantic Ocean in the vicinity of the Cape Verde Islands	None	Winds of 138 m.p.h. reported by reconnaissance aircraft from a location east of Bermuda.	945 mb (27.91 in) near 16°N., 38°W.	British Isles	Hurricane	Sailing ship PAMIR encountered the hurricane southwest of the Azores and went down with the loss of 80 of her 86 crew members.
DEBBIE	Sept. 7-9	Central Gulf of Mexico	Florida	Peak gust of 52 m.p.h. from the south at Tampa, Florida.	1005 mb (29.68 in) at Pensacola, Florida.	Central Georgia	Tropical Storm	Some damage from local flooding. No deaths or severe injuries were reported.
ESTHER	Sept. 16-19	Southwestern Gulf of Mexico	Louisiana	Fastest mile of 52 m.p.h. from the south with gusts to 75 m.p.h. at Pensacola, Florida.	1003 mb (29.62 in) at New Orleans, Louisiana.	Eastern Arkansas	Tropical Storm	Property damage generally light. Crop damage estimated at $1,000,000.
FRIEDA	Sept. 20-27	North Atlantic Ocean southwest of Bermuda.	None	Wind estimated at 70 knots over the open ocean on September 25.	Not reported	North Atlantic east of Newfoundland	Hurricane	No damage to shipping reported.
Unnamed	Oct. 22-27	North Atlantic about 500 miles northeast of Puerto Rico.	None	Wind estimated as high as 43 knots in squalls.	Not reported	North Atlantic near 39° N., 45°W.	Tropical Storm	Storm remained at sea.

*Reduced to sea level

** This is a new form of presentation of storm damage estimates. The Weather Bureau has for some time recognized the fact that without detailed expert appraisal of damage all figures published are merely approximations to fact. Since errors in dollar estimates vary in proportion to the total damage, storms are placed in categories varying from 1 to 9 as follows:

1	Less than $50	4	$5,000 to $50,000	7	$5,000,000 to 50,000,000
2	$50 to $500	5	$50,000 to $500,000	8	$50,000,000 to $500,000,000
3	$500 to $5,000	6	$500,000 to 5,000,000	9	$500,000,000 to $5,000,000,000

Blank spaces indicate no figures available.

* Including hurricanes.

# Not reported in literature, believed minor.

+ Additional deaths for which figures are not available.

EASTERN NORTH PACIFIC TROPICAL STORMS, 1957

By R. Corday Counts
U.S. Weather Bureau
San Francisco, California

Nine tropical storms occurred during the late summer and fall of 1957 in the area between the coast and 140° W. longitude and from the equator to 40° N. latitude. During seven storms winds reached hurricane force, the two exceptions being the storms of Sept. 20-21 and Sept. 26-27.

Special advisories were issued for all storms that attained or were expected to attain winds of Beaufort force 7 or greater. For the nine storms advisories issued by the San Francisco Forecast Office totaled 102. For two storms additional bulletins were issued by the Honolulu Forecast Office, and for one storm additional bulletins were issued by the Los Angeles Forecast Office after the storms moved into areas for which these offices were responsible.

Extensive damage occurred in the Mazatlan area as the hurricane of Oct. 20-21 passed inland on the morning of Oct. 21, 1957. Known damage: the "TUNA CLIPPER" MV SUN PACIFIC sunk; 20 shrimp boats sunk in Mazatlan harbor and 20 beached; one freighter aground. Eight men were killed when the Mazatlan jail blew down. The disturbance of Sept. 16-18, 1957, was rumored to have caused considerable damage in the Acapulco area.

THE HURRICANE OF JULY 14-26, 1957

This storm was initially located by reference to the report of the SS GRAVEL PARK 10.3° N., 109.5° W. at *2000 G.M.T., July 14, which reported winds 45 knots and pressure 998 millibars. The disturbance was charted until 0600 G.M.T. of the 18th upon the basis of a few ship reports, mainly those of the SS CAPE HORN, which reported heavy rain squalls and winds up to 30 knots. At 2155 G.M.T., July 20, the disturbance was relocated on the basis of a report from the SS CAPE HORN. This report gave winds 60 knots, from the east-northeast, barometer 985 millibars, precipitous swells, and rough seas at 15.0° N., 129.7° W. Successive reports from the SS CAPE HORN at 3 hour intervals until 1500 G.M.T. of the 21st indicated precipitous swells, heavy seas, and frequent rain. Winds of 30 to 50 knots were reported by ships from 1500 G.M.T. of the 21st to 0600 G.M.T. of the 23d. After this time winds decreased until the disturbance could no longer be located and was presumed to have dissipated. The last location was 19.1° N., 146.1° W., at 0000 G.M.T., July 25, 1957.

Reconnaissance aircraft flying from Honolulu located the eye of the disturbance six times and estimated the diameter to be 25 to 40 miles.

Highest winds reported were 71 knots by the SS CAPE HORN between 0300 G.M.T. and 0900 G.M.T., July 21 in the area between 18° N., 130° W. and 17° N., 132° W. Lowest pressure reported was 985 millibars on July 21.

THE HURRICANE OF AUGUST 6-16, 1957

This disturbance was located by reference to reports from the SS STEEL ADVOCATE, which reported winds force 7 to 9 and barometer 995 millibars at 0000 G.M.T. and 0300 G.M.T., Aug. 6 near 18° N. and 126° W. The SS STEEL FLYER apparently passed closer to the center near 18.6° N. and 129.7° W. at 1800 G.M.T. of the 6th. Thereafter the storm was followed along a west-northwest course, with positions determined by extrapolation and a few ship reports until the center was located by reconnaissance aircraft at 2214 G.M.T., Aug. 7 near 20.6° N., 134.5° W. Further extrapolation was made to 21.6° N., 142.5° W. at 0000 G.M.T., Aug. 9, after which it was impossible to follow the storm due to lack of reports.

At 2315 G.M.T., Aug. 9, the storm was relocated by reconnaissance aircraft near 27.9° N., 148.1° W. The storm was followed along a northwesterly and later a northerly course to a point near 45.0° N., 165.0° W. in which area the storm dissipated.

Highest wind reported by a surface vessel was 90 knots by the SS JEAN LAFITTE near 35.5° N., 165.5° W. at 1800 G.M.T., Aug. 13. Lowest pressure reported was 990 millibars, Aug. 13, 1957.

THE HURRICANE OF AUGUST 8-15, 1957

At 2100 G.M.T., Aug. 8, 1957, the SS STEEL ADVOCATE reported winds force 9 or 10 at 13.7° N., 106.8° W., and upon the basis of this report a tropical storm was assumed to be in the area. This storm was followed along a northwesterly course on the basis of a few ship reports and extrapolation until the center was located by reconnaissance aircraft near 18.3° N., 110.0° W., at 0028 G.M.T., Aug. 11; further reconnaissance flights determined the position daily until 1500 G.M.T. of the 15th at which time the center was dissipating near 29.1° N., 120.2° W.

Strongest wind reported by a surface vessel was force 8 or 9 by the SS WORLD THOUGHT at 19.8° N., 111.0° W., at 1700 G.M.T. of the 11th, but this was some distance from the estimated position of the center. Reconnaissance aircraft estimated surface winds at 75 knots in the vicinity of 22.7° N., 119.9° W., at 2256 G.M.T. of the 11th. Lowest pressure reported was 972 millibars on Aug. 13, 1957.

THE HURRICANE OF SEPTEMBER 16-18, 1957

This disturbance was located by reference to ship reports at 1800 G.M.T. of the 16th in the area near 15.0° N., 99.0° W., where winds of 30 to 45 knots were reported some distance from the estimated position of the center. From the initial location the disturbance moved in a northwesterly direction with slow curvature to the north and apparently moved inland 50 to 100 miles north of Acapulco, Mexico.

Strongest winds reported were 113 knots by the SS DOLLY TURMAN at 16.3° N., 100.3° W., at 1715 G.M.T. of the 17th. The SS JOSHUA HENDY reported 60 to 100 knots and the SS NASHVILLE reported 80 knots in this same general area. Lowest pressure reported at the surface was 984 millibars on Sept. 17, 1957.

There have been rumors of considerable damage in the Acapulco area caused when the hurricane passed near that town.

* To obtain Pacific Standard Time 8 hours should be subtracted from the G.M.T. times indicated. In some instances the day of the month will be moved back one day by this subtraction. Example - 0000 G.M.T. July 25 will become 4 p.m. (PST) of July 24.

THE TROPICAL STORM OF SEPTEMBER 20-22, 1957

A weak low moving northward along the coast of Mexico attained tropical storm intensity near 22.0° N., 109.0° W., at 1800 G.M.T. of the 21st. This storm was followed to 23.8° N., 109.0° W., at 0900 G.M.T. of the 22d; reports indicated rapid weakening in the latter area and the storm could no longer be followed.

Strongest winds reported were force 6 to 8 by SS ALCYN near 22.05° N., and 109.06° W., at 1700 G.M.T. of the 21st and 37 knots near 21.5° N., 108.4° W. by SS SAHRSTEIN at 1800 G.M.T. of the 21st. Lowest pressure reported was 991 millibars, Sept. 21, 1957.

THE TROPICAL STORM OF SEPTEMBER 26-27, 1957

The SS ROMULUS reported winds of force 10 with heavy seas and rain in the area near 14° N., 101° W., at 2100 G.M.T. of the 26th and on the basis of this report a tropical storm was assumed to be in the area. The storm was followed on the basis of extrapolation until 1500 G.M.T. of the 27th after which it was impossible to follow the storm further due to complete lack of evidence to support its existence.

The strongest wind reported was the force 10 by the SS ROMULUS. The lowest pressure reported at the surface was 999 millibars.

THE HURRICANE OF OCTOBER 1-5, 1957

This disturbance was first located upon the basis of a report from the SS ACADIA at 0000 G.M.T. of the 1st which reported 52 knots at 17.8° N., 120.2° W. This disturbance moved northwest to about 19.5° N., 122.5° W., and then curved to the northeast moving over the lower portion of Baja, California, the Gulf of California, and onto the mainland south of Guaymas.

The strongest wind reported was 90 knots by the MV SEA PREAM while at anchor in Magdalena Bay. The master of the SEA PREAM believed the center passed near his vessel at 1845 G.M.T. of the 4th, at which time the master of SEA PREAM stated that 6 ships were in Magdalena Bay with 2 ships outside the bay and apparently in trouble. The lowest pressure reported by a surface vessel was 996 millibars, Oct. 4, 1957.

THE HURRICANE OF OCTOBER 17-20, 1957

The SS KONGSBERG reported winds of 55 knots near 13.3° N., and 103.3° W. at 0600 G.M.T., Oct. 17, and the disturbance was initially located on the basis of this report. From the initial position the disturbance moved northwestward to about 18° N., 107° W., then northward and finally weakened and dissipated in the area southwest of Mazatlan on Oct. 20, 1957.

Strongest wind reported was 80 knots by the SS NERVA near 18.5° N., 107.3° W., at 0949 G.M.T. of the 19th. Lowest pressure reported by a surface vessel was 986 millibars, Oct. 20, 1957

THE HURRICANE OF OCTOBER 20-21, 1957

This disturbance was first located on reports from the SS DOWA MARU which reported winds of 40 to 50 knots near 19.4° N., 109.1° W. However, a tropical depression was present southwest of this area for some time before the strong winds began. From the initial position the disturbance developed into the season's most severe storm, deepened and rapidly moved northeastward and passed inland over Mazatlan about 1500 G.M.T., Oct. 21, 1957.

Strongest winds were about 130 knots reported by the MV ECUADOR near 21° 40' N., and 108° 15' W; 100 to 120 knots by MV AGRESSOR near 21.4° N., 108.0° W; and 100 knots or more by the MV SUN PACIFIC. Lowest pressure reported by a surface vessel was 959 millibars, Oct. 21, 1957.

Damage was extensive: eight persons were killed when the Mazatlan jail blew down; the MV SUN PACIFIC was sunk; 20 shrimp boats were sunk and 20 beached in Mazatlan harbor; one large freighter grounded; and extensive structural damage occurred in the Mazatlan area. Flooding was reported in areas about 100 miles south of Mazatlan.

CENTRAL NORTH PACIFIC HURRICANES, 1957

by Rue E. Rush
Weather Bureau Airport Station
Honolulu

Storms which develop into hurricanes in the extensive area east of the International Date Line and west of 140° W. or hurricanes which move westward from the warm waters southwest of Mexico, to as far west as 140° W. are fairly rare. Nevertheless, in 1957 two hurricanes in each of these two categories were observed.

HURRICANE KANOA, JULY 14-26, 1957*

A tropical storm originated some 750 miles southwest of Manzanillo, Mexico, on July 14, and moved west-northwestward for 3 days, at which time lack of data forced abandonment of advisories. On July 20, the SS CAPE HORN, at about 15° N., 130° W., reported 60-knot winds and very high seas with precipitous swells. Late in the afternoon of July 20, the Weather Bureau Office in San Francisco began issuing hurricane bulletins on the storm. On July 22, an Air Force reconnaissance plane from Hickam Air Force Base in Honolulu located the eye of the storm described as 40 miles in diameter, with maximum sustained winds of 70 knots and gusts to 100 knots in the storm. Reconnaissance continued daily until the storm filled and maximum winds dropped below 35 knots. When military meteorological offices in Hawaii assumed their advisory responsibilities, they named the storm Kanoa, "the free one". Kanoa continued moving west-northwestward at about 10 knots until July 24, when it began weakening and became a tropical storm within 24 hours, then moved westward as an easterly wave after further weakening. As this wave which had been Kanoa passed across the Islands, it caused marked increase in trade wind rainfall, as much as 12 times the daily normal in some gages on the island of Hawaii.

Even though reports on this storm were much more prevalent than usual for that part of the Pacific, no true analysis as to highest wind or lowest pressure can be made. No damage or loss of life resulted, as the storm spent its entire life over water and approached no inhabited areas.

UNNAMED STORM, AUGUST 6-16, 1957*

Early in August, one of a series of easterly waves developed a closed circulation and intensified to become a tropical storm, and in its early stage moved in virtually the same manner as had Kanoa. However, its path was some 200 to 250 miles further north, but parallel to that of Kanoa. In its tropical storm stage on August 6 a ship passing through this storm reported very rough seas and winds in excess of 40 knots. Later the same day the STEEL FLYER passed very close to the center, and reported a central pressure of 997 millibars.

Early on August 7, a reconnaissance aircraft from Hickam Air Force Base on Oahu penetrated the storm and estimated maximum winds at 50 knots and a central pressure of 995 mb. As the storm neared the 145th meridian, it appeared to weaken markedly, and suddenly recurved sharply to the northwest and accelerated. During the period from 0800 (h.s.t.) August 9 to 0200 (h.s.t.) August 10, it crossed the flight path of the California-Hawaii air traffic and necessitated revisions in flight forecasts. During this time, the storm was apparently very small, as surface ships only a hundred to two hundred miles from the center reported no winds over 25 knots. The reconnaissance eye fix estimated 40 to 45 knots near the center. On August 10, the storm decelerated and at the same time intensified. At 30° N. the winds reached hurricane force of 65 knots by 0800 (h.s.t.). Six hours later the winds were in excess of 75 knots. It continued a regular northwesterly movement of about 12 knots, and maintained hurricane strength. On August 13 at 0800 (h.s.t.), when it was located near 35.5° N., 165.5° W., the ship JEAN LAFITTE, passing near the center, reported a 90-knot wind and a 998 millibar pressure. On August 15, the storm recurved to the north and dissipated within 24 hours. No loss of life or property damage resulted from this storm.

HURRICANE DELLA, SEPTEMBER 2-18, 1957

The third hurricane of 1957, unnamed while it was east of the 180th meridian, became Typhoon Della after crossing that meridian. Della had its origin somewhere south of the Hawaiian Islands, with evidence pointing to development from a cusp in the northern section of an easterly wave of great amplitude. Its early life was camouflaged by the presence of an extensive low aloft to the southwest of the Hawaiian Islands.

Della reached tropical storm intensity on September 2, and at this time was about 250 miles south of Honolulu. It moved northwestward, passing to the southwest of Oahu and Kauai. As it passed near Kauai, swells in excess of 15 feet were generated, a fact verified as they broke over the 15-foot sea wall in Nawiliwili Harbor on South Kauai.

On the afternoon of September 4, a navy ship west of Kauai reported winds of 85 knots, and hurricane warning were issued. The storm continued its northwestward movement and maintained hurricane strength. It passed almost directly across the Coast Guard Loran Station at French Frigate Shoals, and the barograph trace from that station exhibited a near classical profile dropping 33 millibars and rising the same amount all within 10 hours. At a point some 180 miles southeast of Midway Island, the storm appears to have described a tight circle and turned to the south, then to the southwest and moved across the 25th and 20th parallels, and then curved westward toward Wake Island. However, at a point some 350 miles east of Wake Island, it again assumed a northwesterly movement, and travelled to a point near 28° N., 152° E. At this position it recurved to the north then northeast, and remained in the typhoon category for 2 more days. During her life, Della maintained hurricane strength for more than 12 days, travelled more than 5000 miles. No property damage or loss of life was reported on any of the islands Della passed near, but a fishing sampan from Honolulu, working in the French Frigate Shoals area at the time of the storm's passage, has been missing (with its 5 occupants) and is presumed lost.

The Liberian freighter CYGNET suffered damages when a large wave carried away part of the bridge structure, and members of the crew suffered injuries, mainly from flying debris. The damages to the vessel required that a damage control party be put aboard by the Coast Guard Cutter BERING STRAIT.

---

* Early history described in Eastern North Pacific Tropical Storms preceding this article.

HURRICANE NINA, NOVEMBER 30 - December 6, 1957

Hurricane Nina is the second hurricane in recent time to pose a definite threat to Hawaii. It actually came no closer to the islands than had Della 3 months earlier, but at its closest point to the islands, it was somewhat more intense. Nina was first detected on November 29 near Palmyra Island, about a thousand miles south-southwest of Honolulu. The cooperative weather station on Palmyra, manned by personnel of Scripps Institution of Oceanography reported high winds, and from this report the earliest location and intensity were estimated. On Saturday November 30, a plane from the 57th Air Force Reconnaissance Squadron at Hickam Air Force Base located the storm. By late Saturday night, the storm had reached hurricane intensity, with sustained winds of 70 knots and gusts to 90 knots, and had moved northward toward Kauai. At about the 20th parallel, Nina curved slightly to the northwest, and thus relieved the threat to the island of Kauai. A day later Nina turned sharply to the west, and moved on a track just south of west for 3 more days, then quickly dissipated.

Kauai did receive direct winds, rain and heavy seas associated with the storm. At 8:00 p.m. (h.s.t.) on Sunday, December 1, the Kilauea Light Station on the north tip of the island of Kauai reported winds of 80 knots. Waves as high as an estimated 35 feet pounded the south shores of Kauai on Sunday, and were still 15 to 20 feet on Monday. Several homes along the south coast were damaged, and many persons were forced to flee their low-lying homes.

Rainfall was heavy, the Wainiha gage on North Kauai reporting 20.42 inches in a 14 hour period beginning at 8:00 a.m., Sunday, December 1. Floods washed out several roads. Damage was estimated near $100 thousand as a result of the storm.

Oahu, while never under the direct winds of Nina, nevertheless had some damage resulting from what appeared to be a very squally and unstable indraft into the storm. Most of these high winds were lee-slope winds, with sustained speeds above 35 knots. At the Honolulu International Airport, gusts of 71 knots registered at the weather station on Saturday night, November 30, set an all time maximum speed record for the station. Indraft winds not associated with the storm's circulation produced minor damage on each of the islands southeast of Oahu. In some locations minor flood damage also resulted on these islands.

At least one death, and probably three more, resulted from the storm. A City-County employee was electrocuted on Oahu. A sampan with three fishermen aboard was reported missing near Kauai, and is presumed lost.

The merchant vessel MARGARITA CHANDRIS was reported in distress west of Kauai during passage of the storm, but later made port.

Airlines and surface vessels ceased operation into and out of Honolulu during the weekend, leaving some 1250 air travellers delayed at Honolulu and at other Pacific air terminals.

FIGURE 1.

GENERAL SUMMARY OF FLOOD LOSSES FOR 1956

Monetary losses from floods in the United States during 1956, estimated at $64,685,200, was the lowest flood loss since 1941. It was quite a contrast to 1955 which had the second largest flood loss in 54 years of record. The flood loss in 1956 was only 6 percent of the flood loss suffered in 1955. The national average, based on the 10-year period 1942-1951 and adjusted to the 1951 price index is $275,000,000. The total loss of life this year was 42 compared to 302 in 1955 and 47 in 1941. It was considerably smaller than the national annual average of 86 lives lost during the last 32 years (1925-1956). The savings resulting from the flood forecasting and warning service was, as compiled from fragmentary information, approximately $20,000,000 - this figure represents only 15 percent of the river systems where flooding occurred during the year.

The most important flooding during the year 1956 was the spring flood in the Columbia River Basin where record-breaking stages and record peak flows were reported in some of the tributary streams in Idaho and Oregon. The flood damages, estimated at $19,181,000 were comparatively small compared to the flood of 1948. The loss of life in this flood totaled 4 as compared to more than a score of lives in 1948.

ESTIMATED FLOOD LOSSES FOR 1956 (Property Losses in Thousands of Dollars)

# Loss of life carried only where considerable.
* No lives lost in Mississippi Valley floods of 1922.
** Partly storm damage caused by tropical disturbance.

GENERAL SUMMARY OF RIVER AND FLOOD CONDITIONS

YEAR 1957

The most important floods of the year were those that occurred during April to June in Arkansas, Kansas, Louisiana, Missouri, Oklahoma, and Texas. Major floods occurred on all of the rivers in those states flowing into the Mississippi River and Gulf of Mexico. The most extensive flood damage was along the lower reaches of the Arkansas, White, Ouachita, Red and Washita, the upper Sabine, Trinity, Brazos, middle and lower Colorado, Guadalupe, Nueces and the middle Rio Grande. Several of the streams had 6 major flood peaks or more during this period. The lower reaches of the White, Arkansas, Red, Trinity, and Brazos were in flood from 30 to over 60 days.

The most damaging floods during January 1957 were the severe floods in streams in southeastern Kentucky, southwestern West Virginia, and adjoining portions of Tennessee and Virginia. Record stages were reported on several of the streams. Flooding was almost entirely in headwater areas. The record flooding severely inundated several towns in the area.

Severe floods were reported in several small streams in the Snake River Basin during the latter part of February. The flooding on the Portneuf River in Idaho exceeded the previous floods of record. Flooding in central Washington was also severe as it occurred in an area that is generally arid to semiarid. Moderate to severe flooding occurred in several streams in the East Gulf of Mexico Drainage. Flooding elsewhere was mostly minor.

All flooding during March was minor and very little damage was reported.

Most significant during April were the severe floods that developed in Texas during the last 10 days of the month. Excessive flooding occurred on nearly all streams throughout the area east of the Pecos River to the Sabine River. Seventeen lives were lost, several hundred homes were destroyed, and large lowland areas were evacuated. A great amount of damage was done by comparatively small streams in urban areas where flood flows were flashy and large in comparison to stream capacities. These floods were in progress at the end of the month.

The most important flooding during May were the floods in Texas, Oklahoma, Arkansas, and south-central Kansas. The floods were record-breaking in the Cimarron and Washita Rivers in Oklahoma. Major flooding occurred along the Arkansas River throughout its entire course in Arkansas. At Dardanelle, Ark., the flood was the second highest for the period of record. In Texas the floods were less than record, except in isolated cases. More than 4,000 persons were evacuated from unprotected lowlands on the West Fork of the Trinity above Fort Worth and along creeks in Fort Worth, Tex. In south-central Kansas, record-breaking floods occurred on the Ninnescah River and Beaver Creek.

Record to near record floods occurred in several drainage areas at different times during June. The overflows in the Saline, Solomon, Republican, and Blue River Basins were the most widespread in the past 6 years. One of the most severe floods on record occurred on Skunk Creek and the Big Sioux River in South Dakota. It was the highest flood in Sioux Falls, S. Dak., in the last 50 to 75 years. Record to near record floods occurred in the Minnesota River Drainage due to excessive rains. Several streams in the Colorado Basin in Colorado reached record to near record stages during the 1957 "spring runoff". A record crest occurred on the Atchafalaya due to wind and tide effects from hurricane "Audrey". A severe flash flood occurred in the St. Louis, Mo., area with the loss of 10 lives.

The floods in the Chicago area on the 12th of July caused a loss of 9 lives and heavy property damage. Near record crests occurred in the lower Meramec Basin in Missouri during the first 2 days of July. Major flooding occurred in the Saline Basin in Kansas from the heavy June rains. The Wakarusa River approached within 2 feet of the record July 1951 flood. The most damaging flood of record occurred in the White and Wabash Rivers in Indiana.

There was no major flooding during August. Considerable damage resulted from flash floods, the most damaging one being the flash flood on the Little Red River at Heber Springs, Ark. During this rise, the Little Red River exceeded flood stage by over 20 feet at that point. The rise downstream was considerably less.

Major flooding occurred in the smaller tributaries of the middle and upper portions of the San Antonio and Guadalupe Rivers in Texas during September. Considerable flash-flooding occurred in the city of San Antonio and a short distance downstream and over the upper portions of the Medina River. Flooding elsewhere was minor and sparse.

There were 2 major floods in the Colorado Basin in Texas during October. One was in the upper watershed above Ballinger and the other in the lower section below Smithville to the Gulf. Both were due to heavy rains measuring 7 to 13 inches in 24 hours. About 500 persons had to be evacuated from their homes. Major flooding occurred along the Guadalupe River from Gonzales, Tex., to the mouth. Light to moderate overflows occurred on other Texas streams. Flooding elsewhere was light and sparse.

Damaging floods occurred during November in the Ohio Basin and in the East Gulf of Mexico Drainage. The flooding along the main stem of the Tennessee, though relatively minor under normal conditions, resulted in major agricultural losses to the unharvested corn and cotton crops in the western portion of the Basin. A near record flood with heavy crop losses occurred on the Elk River in Tennessee. Severe flooding and heavy damage was reported on the Green and Barren Rivers in Kentucky and on the upper Tombigbee in Mississippi.

The most significant flooding during December occurred in the Wabash and White River Basins in Indiana. Streams in this area rose to their highest levels in 6 or 7 years. Actual damage was small considering the magnitude of the flood as most crops are normally gathered by December. Flooding elsewhere was mostly light.

# The above average annual values for standard pressure surfaces of height, temperature and relative humidity are the combined values of the 1500 G.M.T. observation from January through May, and the 1200 G.M.T. observation from June through December. Wind data are for the combined observations 0300 G.M.T. from January through May, and 1200 G.M.T. June through December.

‡ Combined observations for 0300 G.M.T. January through May and 0000 G.M.T. June through December.

Relative humidity data beginning with October 1, 1948, were computed and expressed in these tables on the basis of vapor-pressure over water. Upper air values of relative humidity at levels with temperatures less than 0°C, have formerly been computed and expressed on the basis of the vapor-pressure over ice. All relative humidity observations are obtained by electric hygrometer and have been adjusted to compensate for the value occurring below the operating range of the humidity element.

These average values for standard pressure surfaces were obtained by rawinsondes; dynamic height (geopotential) in units of .98 dynamic meter, temperature in degrees Celsius, relative humidity in percent, and resultant winds in degrees and knots. The resultant of wind speed are biased toward lower wind speeds as the number of observations on which the resultant is based lessen. See note following Table 22 in the January 1950 issue of Climatological Data, National Summary.

SOLAR RADIATION DATA

Average daily values (direct and diffuse) received
on a horizontal surface, tabulated in langleys.
